before you can really try an approach, you should try to figure out just how
the interference is being picked up.

for example, the speaker wires would be a good guess, but what if it's
coming in on the power line?

or only on the VTR inputs or phono inputs or really being picked up in the
cassette deck heads?

yeah, but...if you have news & mail, there's only a small possibility that
you don't have web.

the real question is: are the FAA and FCC sites text-only user friendly?

Source record: 154214

Before you start anything, run your rig into a dummy load and see if they still get the interference. It is very possible that it is going through the power lines -- this quick check may save you a lot of trouble and helps isolate the problem.

5. Word 7 Postal bar code question for QSL labels

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: herndonNONONOSPAM@texas.net
Message-ID: <oLaj2.2084$V3.187@news1.giganews.com>
Source record: 154215

I've got it down to paste information into Word 7.0a into Avery mail label forms to print out for QSL outgoing cards. My problem is to get USPS bar code information at the top of the labels, once the data is put into the label area. I can do the envelope bar code stuff for each one, but this is a large amount of effort to go through to get a label to paste on a QSL card (not #10 envelope with new, higher postage).

Anyone have a technique or macro to do this?

Prefer email, because I don't often read this Usenet group, due to word wars going on making it a very bad signal to noise ratio. <smirk>

Thanks from K5FNI,
Rick Herndon
Austin Texas

>>limited and I choose to QSY.

Haven't read it lately Jim, but assuming Jeff Herman's quote from the FCC is true then the FCC's view is that transmissions other than licensed amateurs are excluded. I've never heard of a citation issued when op's on 40m transmit off the side of a broadcast station although some might consider that interference with the AM station. Where would you draw the line? Like I said, I don't waste much time fooling with them, there is plenty of band available. But I guess you have to ask who's interfering with who? Since I'm licensed to be there and he's not it would be my assumption that he in fact is interfering with my choice to operate on that particular freq.

9. Re: Using RF Fingerprinting to help control jamming on repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: Todd Ellis <tellis@microcure.com>
Message-ID: <7Obj2.3925$rJ3.903086086@dca1-nnrp1.news.digex.net>
Source record: 154219

I wonder if a control op were to
>implement RF Fingerprinting on their repeater and set it up to deny
>access to any radio that has been used to jam that frequency
>previously, if jamming would stop.

Great idea, but I don't think it could ever work right. With so many radios being issued "cookie cutter" from the manufacturers, the audio and deviation is going to be relatively similar. If this was a factor, I'd just as easily go in and adjust my deviation to spoof it anyways!

In any case, I don't think that the model you mentioned has that feature.

The way commercial community repeaters work, it's much easier to lock out undesireables. First, commercial users (landscapers, tow trucks, etc.) are not allowed to change frequencies or PL/DPL tones unless they have access to expensive EEPROM writing software and interface for that specific radio. When the commercial user stops paying for service, the repeater operator dials into (or locally punches into) the multiple CTCSS panel, and deletes their tone. The tone panel allows multiple selective CTCSS tones to pass through the repeater, and thus if your tone set is killed, you can't trip the repeater! Pay the operator and he can turn you on again.

This feature would be very helpful on the ham bands, but very few clubs are willing to close their repeaters to start with. I know of some that are DPL (digital PL) protected so that casual radio users who have CTCSS can't access the system unless they buy a DPL encoder and know how to install it!! Those repeaters have VERY few problems, as could be expected. They also have very little diversity - no newbies, no travelers, but also no LIDs.

As far as your current LID problem, good luck!

Todd, N2XL

10. Re: RFI Neighbors stereo system

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: Todd Ellis <tellis@microcure.com>

Source record: 154220

Hey Rick:

Be glad it's only the stereo and he's being friendly about it. About 10 years ago, a friend back in Upstate NY had a TVI complaint forwarded to him from the FCC. A neighbor that didn't like his cubical quad at 60 feet decided that his station was getting into everything...and I mean everything. At the bottom of the list of affected appliances was "...microwave oven". Think about that!

BTW, the VE6 guy had a great idea about using the dummy load.

interference
>to any radio communication or signal."

Well, Im not a lawyer either, but Im sure somewhere in Part 97 Im sure it
also mentions that from 28 to 29+ Mhz is set aside for licensed radio
amateurs only. So the part about "any radiocomunication or signal" may
already assume that any radiocommunication or signal in that part of the
band is licensed to be there thus making the transmitting station illegal
because it is interfering with another radio amateur. But of course we'd
have to let the lawyers figure that one out.
>

Hello. I'm interested in getting a Create CLP5130-1 beam for VHF-UHF hamming. It looks to be a pretty good antenna. It can handle 500w, low SWR, 25 elements, and high gain. I'm wondering if this beam happens to have any kind of reputation, or if any of you have ever used one before. Please let me know if you happen to have an opinion on this antenna. Thanks a lot for reading, and happy new year!

You could try placing your antenna further away from your neighbors house if
that is possible, and hope the other neighbor doesn't own a stereo...

Since Part 97 applies strictly to Amateur Radio we do not have to assume
anything here.
97.101(d) does not tell us we can interfere with non-licensed signals....how
do we know
which is or which isn't? Yes, some are obvious but neither does it tell us
we can interfere
with unlicensed operations.

>>To me the keywords are ANY and SIGNAL. It's right here in the book. Yes,
>>the bootlegger is doing something unlawful. It might be a poor analogy
but
>>if a robber, who did not have an account at a bank, was robbing the bank,

for
>>their own use?

>No, but sure seems appropriate for someone to take back the money if it
>BELONGS to them.

Okay, along that same line....which frequencies belong or were assigned
specifically to you?

If you are on a frequency and someone pops up to interfere with you, I would
believe it is okay to stand your ground....either ignore the interfering
signal and continue with your QSO or QSY if you can't. But to inadvertently
run across a signal that you determine is illegitimate and to interfere with
it is another story. You do what you want though, it's your license and you
are advancing your skills in both communications and technical phases of the
art by doing so.

I guess this could be classified right up there with road rage. We'll call
it radio rage...and it makes a lot of sense.....
......
.....
..... Not!

They catch (caught) them in the act of using the rigs. A 11 meter radio opened up to transmit on 10m, not TOO strange in a cab is it? Particularly when the TLC KNOWS they are doing it.

34. Balance and amateur radio and life

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <76hs47eio1@w3eax.umd.edu>
Source record: 154273

Sent to me by a friend and modified slightly. Happy 1999 everone!

****

Friends,

as we start yet ANOTHER year,

Please remember that this is a hobby, not just a hobby but still a hobby.

"An Amateur is Balanced", says the fifth section of "The Amateur's Code",
from Paul M. Segal. The whole Code is printed in the front of the "Radio
Amateur's Handbook" and worth reading and considering while you plan your
next year in this, the best hobby in the Known Universe.

Balance means accepting the fact that not all amateurs will run QRP...
And some will...
Balance means also accepting that some will operate SSB...
And CW...
And RTTY...
And AMTOR...
And FM...
And some will get the Bends if they operate below 50 MHz...
And some will get nosebleeds if they stray above 50 MHz...
And some still think of their bands in wavelengths or Megacycles...
And some still call capacitors "condensers"...
And some can't (legally) drink yet, or vote...
And some will not be with us much longer...
And some are not with us any longer...

And ALL of them are part of the amateur community's history and future.

Most of all, Balance means that there is a World outside of Amateur
Radio, and we all have to live in it. Family is, and always will be more
important than getting on the air, building (yet) another kit, chasing a
Fox, or that new country/county/Zone/Prefix/State/Etc...

In all that we do in the hobby, Balance is the most important thing to
keep, and in keeping a Balance between our lifetimes and our pastimes, we
will all have a better year as will our families and friends.

Get on the air, please! Get out with your kids, grandkids, spouses,
signifigant others and families, PLEASE! Enjoy life to the max, your
first time around is the best.

Tom Baily,

I respectfully take exception to your commentary. FCC action may well be called weak but is wholly well intended.

In the latter 80s hams were asking when? When was the FCC going to crack down on balooning nonsense? Also was it going to act on the "broadcast" issue?

To get answers, I flew up to FCC offices on M Street in Washington. Instead of a streamlined new building, a simple floor or two with rickety furniture served as setting for our interview. Answering questions on tape was Robert Mcnamara, Chief of the Private Radio Bureau and an FCC Counsel.

The rapport was instant, the goals were common to the betterment of ham radio. Enforcement was front and center during that interview. I got the distinct impression that tiny enforement was taking on widespread chaos on the band. I also came away understand that the FCC didn't have difinitive answers to many of the issues facing us. For example, trying to silence the K1MAN "broadcasts" was ill executed because the Commission had gone on record earlier sanctify his operation

37. RFI Neighbors stereo system

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: Rick Conners <conners@teleport.com>
Message-ID: <368CACAF.62EAE136@teleport.com>

I put up a new G5RV antenna. My neighbor has no problems with his television set (hooked to cable) but he is receiving rfi into his stereo system.

I have purchased some ferrite cores to place on the output wires of his speakers.

Is there anything else I can do to help eliminate the problem?

Thanks,

Rick

> is receiving rfi into his stereo system....
> Is there anything else I can do to help eliminate the problem?

Before you go all-out, remember that the problem is with
the neighbor's equipment, not yours. The FCC will back
you up on that. The neighbor needs to foot the bill
for the filter stuff, not you.

That being said, it's always best to be a good neighbor
and try to get along with them, if they will be reasonable.
Most of my neighbors were friendly and paid for the $25
worth of filtering to fix the problems.
One wanted to be an a-hole and tried to make trouble.
He got no where and now he has to live with the RFI.
Serves him right.
Be aware that an a-hole neighbor can call a lawyer or
the cops to try and intimidate you. Don't be a sucker.
They don't have a leg to stand on. Hang tough,
call the ARRL director for your area and they will
point you to some help.

You may need several good-quality ferrite cores on all
speaker and mike leads. Also, an RFI filter on the
AC power leads of all components may be needed.
Start with the speaker leads AND any cables
connected to audio inputs. If that doesn't clean it
up completely, you'll need to filter the AC power lines.

I've never had to do more then this, so if
that doesn't do it I'm stumped ;-)

Rick, are you interfering with your tv, stereo, telephone or even the toaster :o) ? If not, show your neighbor and tell him to contact the manufacturer of his stereo for a fix. It is not your problem if you have an RF clean station, BUT, to be a nice Ham Neighbor, helping for the fix is good policy.

Before responding to your post I looked for my ARRL Interference Manual. It has lots of help and must be damn near all the equipment manufacturers phone number in there, but alas I could not find it. If the stereo in question is an "el cheapo", there is most likely no fix for it but the trash can!

If I locate it later, I will reply again.

73, gl

Gee, I wonder why. Go to a ham club meeting sometime. Watch the "old salts" ignore or even act nasty to the young kids that do have some interest in the hobby. Then they bitch because there's no "new blood" around. Seen this scenario too many times in too many places. Listened to the same on the air, as well.

Not to mention, How does a kid come up with the money to get started in this hobby? When the cost of ham gear is approaching the cost of a used car, which do you think most teenagers are going to spring for? (not that I blame them. having wheels to go on a date was pretty hot stuff to me too, when I was 16.)

Well, you better make bloody sure that your equipment is in perfect tune
and is not transmitting any harmonics before you go to your neighbor
with that attitude. Got a spectrum analyzer handy? Also, if their
equipment meets FCC part 15 subpart B requirements,(most stuff does,
these days) that may not be true anyway

> That being said, it's always best to be a good neighbor
> and try to get along with them, if they will be reasonable.
> Most of my neighbors were friendly and paid for the $25

Would not hurt to offer to help out on that either. Will go a long way
toward getting along with your neighbors. Besides, a decent emi filter
that he puts between the wall outlet and his stereo and some ferrites
will only set you back about 15 to 25 bucks. Again, great way to stay
friends with the people around you for very little money.

> Be aware that an a-hole neighbor can call a lawyer or
> the cops to try and intimidate you. Don't be a sucker.
> They don't have a leg to stand on.

Yah, but if he has more money than you, can wind up selling the ham gear
to pay for the lawyer. This is what is known as a Phyrric victory.
Does not feel much different than losing.

Good. That will make it easier for the FCC to find them if there's another
"sweep" in the works. Before you scoff at this, recall that the last sweep a
few years ago nailed 20+ outbanders. No one knew at that time that the FCC
was even doing any monitoring. And, yes, many held ham licenses.

So you gotta ask yourself, "Do I feel lucky?"

46. Using RF Fingerprinting to help control jamming on repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: inpursuit@thespeedlimit.not
Message-ID: <368dee3c.3444876@news.pacbell.net>
Source record: 154285

I live in an area plagued with jammers on repeaters, so as a result I no longer use them. I wonder if a control op were to implement RF Fingerprinting on their repeater and set it up to deny access to any radio that has been used to jam that frequency previously, if jamming would stop. A person would have to have multiple radios to keep jamming, and eventually all the radios would be locked out of the repeater anyway. I don't know if the MoTron TxID RF Fingerprinters (the only brand I know of so far) are capable of denying access to problem radios, but if they are they could probably be used to eliminate jamming. Any thoughts?

47. Re: 10 Meter Bootleggers

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: Frank Meredith <mereditf@cadvision.com>
Message-ID: <01be359e$8054d260$6350e4cf@default>
Source record: 154286

And how many of those guys know that if you want a 1500W carrier you have to build a 6KW amplifier to handle the PEP. Attempting to use AM at 1500W with a 1500W amplifier seriously reduces the quality and intelligibility of the signal, not to mention the horendous splatter. Since the operators have little, or no, intelligence I guess it's not that important.

Incidentally, this may not be news to everyone, but it sure seemed to have stirred up some interest, and hopefully some serious jamming of these morons - which according to one posting, quoting the FCC, is perfectly legal.

73,

Frank

> has little knowledge of REAL radio....I'll take on any of them with 1/10th
> the power and BURY them....

This is true. If you're S-5 at 100 watts, 1000 watts will only increase you to about S-7 at best. If you wanted to use strictly power to increase your signal strength, you'd have to use 10,000 to 12,000 watts to get an S-9 up from S-5, whereas a properly tuned and loaded antenna with only modest gain will give the same results at 100 watts. The whole thing is explained in detail in a recent QST article from earlier this year.

>mean after all the
>frequency IS in use right?

Tim: Maybe you should consult Part 97 for Amateur Radio and Part whatever for the local police dept. Two different services....two different sets of rules.

I think we have seen this discussion many times in the past. Someone speaks to the FCC out west and they say that the FCC says the ham can do whatever is within his privileges to do. The bootlegger does not belong there and therefore it is not considered interference to talk over them. I've always disagreed with this supposed FCC official whom I believe is a fictitious character to begin with.

I wonder, in a court of law, how many attorneys would read between the lines to add their own verbiage to Section 97.101(d) which says: "No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal."

To me the keywords are ANY and SIGNAL. It's right here in the book. Yes, the bootlegger is doing something unlawful. It might be a poor analogy but if a robber, who did not have an account at a bank, was robbing the bank, is it okay for someone with an account to take the money from the robber for their own use?

What part of Part 97, Subpart B says you can run anyone off the air? I doubt very seriously that any bootlegger is going to prosecute a licensed amateur for "interfering" with his illegal transmissions, to begin with, but I really think vigilanteeism and CB mentality have no place in amateur radio.

I say again and again and again....these newsgroup lawyers base their thoughts on their own emotions, what they would do, and not what the law instructs them to do.

The were indeed carrying on, bright and early on the morning of 01/01/99 and
just as predictable as a Timex wristwatch! Most notable on 14.300 as
our ebonics speaking coconut head n9gor was still smashed from an prior
evenings New Year's festivites and launched into the most profanity laced
drunken ebonics gangsta dialogue I've heard come out of the speaker.
This went on for over an hour and unfortunatly I did not have any blank tapes
in the machine as this exhibition by the 14300/14.313 Zoo really got things off
and running for 1999. Happy new year !

I only heard this morning's show with n9gor flying over the edge. Ya should have heard it! Sounded like a gangsta rap concert with this shine in there cussing up a blue streak in a drunken stupor. I heard that the fur was also flying on 3.901 LSB a night or 2 also but I missed that one. Some of us do things apart from listen to the ham radio animal house entertainment channel, well, most of the time, grin :)

Wouldn't it be prudent for him to first ensure his own installation is without error before taking the position that the FCC will back him up? I agree that the equipment manufacturer is responsible for proper RF filtering, etc. but how do we know he has used proper grounding techniques, that his transmitter is putting out a clean signal, etc.?

Just a thought.

Us CW operators refer to such a signal as a "beat frequency oscillator." It allows us to turn off the BFO on our receivers and heterodyne against the outbander. Same technique is used with the 50kW broadcasters on 40m (except that on 40m, one can work CW, hear the news, and listen to music all at the same time!).

Watch some kids completely disrespect their elders.

Guess what...those kids'd probably make pretty lousy hams, let alone adults.

HOW does a kid earn enough to get some gear?

1) Buy something used
2) Build a kit (there are many available these days)
3) Loaners from adults
4) Hand-me-downs from adults

I have personally loaned out roughly 25 pieces of gear, ranging from
antenna tuners to HTs to keyers to HF rigs, to kids and others who
either didn't know what they wanted to make for their "big purchases"
or couldn't yet afford to make that purchase.

Most hams I know are perfectly willing to lend a hand or a piece of
gear to another ham or prospective ham. It is this sense of family,
almost, that makes ham radio so unique and special.

63. Attention IC-746 Owners

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-01 00:00:00 UTC
From: Rick Lehman <rlehman@icanect.net>
Message-ID: <368CFF55.CCACB170@icanect.net>
Source record: 154302
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have learned of a mistake in the IC-746 manual which I believe is significant and maybe of interest to others. The relay inside the Icom used to enable the relay inside a linear amplifier is rated at 2 amps sink current per the manual. The relay current for my Dentron Clipperton Amplifier is about 350 ma. Therefore, I felt safe in using the Icom relay. However, I discovered that in operation while releasing the mic PTT (push to talk), the Dentron relay did not always release immediately and would hang enabled for a few seconds. Gradually this became worse and I would have to hit the PTT a few times and then it would release. In talking to one of the Icom technicians, he said that the relay was only rated for about 20 ma. and that eventually the contacts on my Icom relay would fused together. He recommended use of the Ameritron ARB702i. This is an interface box with a transistor switching circuit which can sink more current from the amplifier relay than the internal Icom relay. In talking to an Ameritron technician he asked several questions and concluded that this box would indeed work although its current rating was only 200 ma at about 24V as I recall. He was not sure what current it could handle at 12V (the box is rated for supply voltage of 3-24V as I recall). He did mention that the manual mentions a RadioShack transistor substitute which can sink about 1 amp. So my suggestion is to build your own circuit, use an external relay or consider purchasing ($39.95) this box from Ameritron or one its dealers. It's a shame that Icom would include such an inferior relay inside its unit on an otherwise excellent product.

Jim
Yes you can turn him in and the FCC isn't going to do anything but send
them a letter in witch the So Call freebander will laugh and continue to
keep on doing what they are doing. The FCC refuses or is to scared to go
out to the CBer's house and bust them! Plain and simple.

"disco" still is after a fashion if you're willing to call it "dance music" and listen to things like "trance", "house", "rap" and such. check out the late night groove stuff they run on http://www.wtks.com for one example.

what was out of fashion was the overproduced productions full of irritating random "stings" and noise and such. once folks paired up the disco type of strong beat with things like some of the composition qualities of electronic new age as a for instance, you got stuff that was much more listenable in a broader setting for more times.

after all, Muzak uses Devo's music in their background systems. I can't say if I've ever heard any Donna Summer or KC and the Sunshine Band stuff. (I remember the first time I heard "Mongoloid" on a muzak-type system done in the background music style...)

The wording, then, needs to be changed. Maybe changing it to "authorized radio
communication or signal" would do.

10 Meters will always be like this as long as C.B.'s are manufactured that are easy to modify, such as the RCI 2950 or many other rigs out there, anyone with half a brain can modify these radios. Several years ago, I called CQ on 10 meters one night and this guy came back to me with a made-up callsign that didn't even sound close to being legit. I asked him if he had a ham radio liscense, and he just started laughing and said, "Well I better get off of here." I told him that I thought that was a pretty wise move. What needs to happen in my opinion is for the FCC to totally put an end to the manufacture of C.B. radios altogether. Nobody short of the trucking communiy really uses C.B. for anything, think about it folks. It seems to me like there are only a handful of good companies still around that manufacture C.B.'s to begin with, such as Uniden, Cobra, Midland, etc. I think if the C.B. band became a relatively "dead" band, one day it could possibly be placed back into the hands of the amateur community, call me crazy.

Age alone does not warrant respect. In order for respect to be earned, it has to be given.

I've seen the same scenario in local ham meetings myself: Ye Olde Farhtz complain about no young blood, and then get all military when someone has new or better ideas.

>Tim Hynde wrote in message <76jhpmcub1@smithers.eaglequest.com>...

>Since Part 97 applies strictly to Amateur Radio we do not have to assume
>anything here.

Well, what I'm trying to say here Jim is, yes part 97 does not specifically spell out that a non amateur signal is any different from any other signal, but where on earth would you draw the line? If we take "any signal" litterally then should I move off freq when the sunspots start emiting noise? Is 3.597545 not a vailid freq? Because I can ALWAYS hear a color TV signal there

>Okay, along that same line....which frequencies belong or were assigned
>specifically to you?

Jim we could go around and around on this, my point was that these frequencys ARE assigned to me, you, and any other licensed amateur. Again, I don't waste time fooling with them but I'll admit I don't have a problem for those who attempt to push the freebanders back below 28Mhz. While I understand the quote you posted from Part 97, I'd be willing to bet that a court would favor my operation on 28.032 if it happend to be already occupied by a freebander. Yes, it does say "any signal" but like many other laws, it may have to be tested in court to get a definition of what was meant by "any signal". You may think it's crystal clear but as I asked in the paragraph above where do you draw the line?

Yes this senario does exist but here in MI I have seen MANY clubs that make club gatherings a family affair, I see more and more of this instead of less. As far as the hazing ritual, I went through it 21 years ago, just the same as a "newbie" on the internet can get his clock cleaned by asking a stupid question, hey I'm not saying it's right but it's certainly NOTHING new.

>Not to mention, How does a kid come up with the money to get started in

Mark, the cost of amateur radio is probably the lowest it has ever been. Yes, you can spend $5000 on a new dee lux radio, but you can also pick up a used HW-101 for $75 and have a ball. There are QRP kits for $50 that you could easily work all states with and more, for a while my entire shack consisted of a NorCal 40 a 2 watt QRP rig and a dipole. Anyone who thinks you need to spend a thousand dollars to enjoy this hobby knows little about whats available.

Jones wrote about having installed a new G5RV antenna...

I see reference to such an antenna in the 1964 ARRL Antenna Book, under the heading of "Center-fed antennas" - same dimensions and feeding arrangement as the G5RV.

I wonder if G5RV himself took out a patent on a 35-year-old design? If so, I think I'll apply for a patent on the half-wave dipole fed with coax and balun. It will be called the "KH-Six-hundred" (unless my 610V gets approved - then it will be called the "WH6U").

The FCC knows about this guy and refuses to do
>anything!
> 73 from Oris

Like I said, Oris, the FCC doesn't have the resources to go out, DF, monitor and arrest these guys. I'm sure they know about hundreds, if not thousands, of offenders, but each one has to be monitored and "caught" in the act by FCC complience officers; then arrested on the spot. They can't just rush out and arrest people on your word alone. They just don't have the personnel to do this thanks to our congressional representatives cutting their budget.

I have some experience of reducing the heat emitted form incandescent bulbs - I do not think that U will have much joy applying a heatsink compound directly to the bulb envelop and base - although if U find a suitable compound I would be interested to hear about it.

The solution I have used in the past is to build a metal frame around the bulb and cover the apperture where the light is to be emitted using a heat absorbing glass - Schott KG series glass are suitable.

If the optical transmission characteristics are critical then it may be possible to use a clear borosilicate glass with a interference filter, blocking in the NIR region.

Good Luck

Cheers

Andy

The question regarding talking to Freebanders and the intelligent and diverse responses to this
question brings up a subject important to radio, that is ethics. I notice that Popular Communications
(a child of CQ Magazine) both advertises and supports freebanding and cell phone listening, both
of which are against the law. Some of the writers who support freebanding are themselves licensed
hams.

The issue is: is there a contradiction between illegal activity and supporting ham radio?
If so, why this loose attitude towards communications laws????

91. All socked in an a QRM'in

Yeperr Cousin Jethro! Just about everything East of the Misssissippi
River is being >socked in< by a massive snow event as I type this onto
my trusty Mac, and sho-enuf as a black pickaninny launches onto a bowl of
chitlins an collard greens, their hard at work on the 14.300 mHz USB
radio ZOO! The fun actually started last night with our perrenial favorite, Walter
Barstool, gettin the ball rolling with his trademark German marching music
Show on 3.950 kHz LSB. "Uncle Ziggy", as he is known by some, seemed to
peter out a bit early but it was a good showing nonetheless. I still say that
there is NOBODY who can put out true High Fidelity audio on SSB like Mr. Barstool
can. Walter should really write a book about audio engineering before his liver
finally quits and he ends up in the Betty Ford Clinic Geriatric Care Home. (sigh..)
As for 14.300 USB it's business as usual! Cat calls, tape playing, charges, counter-
charges, more charges, more counter-charges, fart noises (not 2 forget the new
14.300 classic "porkbutt passes gas") people who don't know which end of a hand
mic to talk into, piss-weakers, music players, re-broadcasts of Bro. Stair (are done by
someone in Ga) hacking coughs, sounds of sawing of wood and drills, etc etc etc...

In short folks, hope for a real blizzard so that half the US gets SOCKED IN at home
and we could be in for quite a "Biiig Shooww" as the late Ed Sullivan would have said...

Enjoy, but don't take it too seriously since the participants are each certifiably short
2-or-more-cans-to-a-six-pack, or have already drank that much already and are moving
onto the next case of Coors. (can you imagine some ham plunking down a Grand or more
for radio gear to do this s##t? I'll tell ya, between Ham shows and Train shows they really
must clean out the mental asylums
on the weekends)

Hello Dab,

I think its more a question of which side of the fence an individual is on when it comes to governmentally regulated bands. If one is a licensed Ham, one should be bound by and accept the rules that they agreed to when they applied for their license. If a person believes no one has the right to tell a person where and how they should broadcast (free speech), then I would think they believe they are within their natural rights when using the freeband however one usually doesn't find these people signing up for a ham license and then publicly proclaiming their freeband independence.

Ive heard many licensed amateurs on the bands proclaim their right to the freeband however I find them to be hypocrites. My thinking is, "if one wants a license, then play by the rules"..."if one doesn't want a license, then so be it", but, dont acquire a license and then cry foul when you are restricted to certain band......especially if one knows about the bands when they're studying for their ticket.

73's

--

Some people look at what is and ask why.....
Other people look at what isn't and ask why not......

.

$60.00 plus shipping. I have a Power Supply for a Ten-Tec ham station. The model number is 252G. Rated at 18 amps. In working order. It has two lights on the front, LINE and Output, both come on and work. Has a 6 pin socket in the rear to connect to the radio. Power is controlled by both the front panel on/off switch and the radio. I used a jumper in the rear since I don't have the radio. It also has two RCA jacks in the rear. One is used for auxiliary power, the other is for reading current draw. I hooked up my hand held spotlight from my car as a load. maintained 12.8 volts. Digital picture available later today upon request if you need to see what it looks like. TERMS: US postal money order preferred for fast shipping, checks OK, will ship when it clears. UPS unless otherwise requested. Thanks for your interest and Happy New Year. Reference available upon request. WA6PHN near San Diego

Terrific advise Drew, watch as the nicads spew electrolite all over when you hook up a wall wart that has an amp or so output. There is a REASON the charger is low current butthead can you guess what it might be?

Go to Yahoo's map page, and enter the address. When it displays the map, there will be a star at the center, over the requested address. Click on it. The same map will be displayed; click on the star again. Same map, but now in the URL at the top of the page you will find the LAT & LON. Look for mlt=xxxx and mln=yyyyy, with xxxx as the LAT and yyyy as the LON.

Enjoy,

Greg.

You can use any wall wart of 12-volt power supply. Actually, just about
anything works better than the 202's "stock" charger. It's extremely low
current.

Source record: 154237

> Besides don't blame the ARRL,they are the >ones that have been pushing
>for the dumbing down of amatuer radio and >this no-code baloney for
>years.

HUH??? Must have been quite a New Years bender you were on! The ARRL was adamantly OPPOSED to the creation of ANY codefree license for several years. The loss of 220-222Mhz was due in large part to Oldington's stubborn refusal to accept the no-code Communicator class of license in the late 80s...a license which would have had much more restricted privileges than what came to pass as the no-code Technician. The Communicator class would have allowed ONLY 220Mhz operation with low power levels. But the old goats at the ARRL tightly clenched their pacemakers and growled "Nope. We had to do it so THEY have to do it too!" Result: FCC determined 220 was underutilized and reallocated 40% of the band to commercial mobile use. Thanks again, Oldington!

>out to the CBer's house and bust them! Plain and simple.

You certainly have that wrong. THe FCC's problem has always been
insufficient enforcement resources, due to congressional mandates and budget
cuts. That's where the problems lie.

Ed

On Fri, 01 Jan 1999 01:21:39 GMT, Burp Fisher hastily scratched out the following adumbration:

>Must really suck to insult others to better yourself.

Burp, I think the same thing each time I read your posts (insults).

The very core of your existence is a colossal insult to the intelligence of even those who suffer the most severe forms of mental retardation.

You exist for one purpose,,,,, to insult anyone and everyone, without discretion, preference, or discrimination.

I'm glad that you yourself feel insulted Burp. And I'm certain that because of this,, everyone feels soooo sorry for you and there isn't a dry eye in the house.

Source record: 154245

You Said:

Hmmm...Fred, it's been a few years, but I think you have the two backwards. The B model ages faster. The W model was used for HD government applications a about a generation ago. My dad and I had pairs in both the TS-520 and 530 radios (when they were THE choice for DXpeditions...man, times change!!)

Todd-

Perhaps I don't give the W model enough credit. I do not recall exactly when the B model was introduced, but it may have been about the same time that the TS-520 came out. I think the W model was introduced in the 50s, perhaps around the time of the Korean War. I don't have tube data handy, but my recollection is that the B model has higher plate disipation than any of the earlier versions, and that the W model was just mechanically more rugged. I've never used one in a circuit that required the higher power.

One advantage shared by the W and B models, is the welded plate cap. In my use of the various 6146 tubes, the most frequent failure mode was oxidation of solder on the soldered plate cap. When one of them stopped working, you could often see a tiny crack circling the wire where it penetrated the solder. Re-soldering would temporarily return it to life. Unfortunately, the solder I used had a lower melting point than the original, so repairs didn't last long. I never had that problem with the W or B models, so they both appeared to have longer lives.

>I will be most appreciative if someone can explain the circuitry or at
>least provide a published reference that does address this operation.
>
>Thanks in advance for any suggestions.
>
>Bill K9ETD Hudson WI
>
>
GFCI protectors are not sensitive to voltage or voltage differences at all. In a properly connected GFCI circuit, there is a wired connection to the "hot" conductor (usually black color in 110v circuits) and the "ground" (neutral) (usually white) conductor. The GFCI is sensitive to current differences between the two conductors it is monitoring. If the current difference exceeds 5ma (.005 amps) the breaker trips. 5ma is the lower limit of of sensitivity of the human body to electric current and death is supposed to occur at currents greater than 5ma.

If there is a current difference of 5ma or greater between the cunductors, the GFCI trips, no matter what the reason for the difference.

You cannot safely use a 110volt GFCI on a 220volt circuit anytime. The White cunductor is not switched on 110volt GFCI's, it is connected all the time. There are special 220volt GFCI's that can be bought, but bring plenty of money. They are expensive but cheaper than funerals.

In the original question and circumstances, there must be a ground in the wiring somewhere that is causing a current unbalance and tripping the GFCI. There is no other possible circumstance. If one is interested there is a schematic for a GFCI sensor and system in one of the Motorola Semiconductor Data Library books

from about 20 years ago. I have it somewhere but not immediately available.
Someone around Hudson, WI is bound to have a copy.

Robert Richardson K5DXN Las Cruces, NM

I RECENTLY DID A REPAIR ON AN IC-756 WITH THE SAME SORT OF PROBLEM. DON'T
RECALL WHAT AMP IT WAS DRIVING, BUT I THINK IT WAS A 12 VOLT AT 100 MA SINK
CURRENT THAT I MEASURED. ALSO HEARD SEVERAL OTHER IC-756 OWNERS ON 75 METERS
MENTIONING THE SAME RELAY PROBLEM.

I AGREE THAT A RELAY DRIVER WOULD BE A PRUDENT IDEA.

Well Ed
What I have posted is pure fact. I sent a letter to the FCC on behalf
of the people in the area of Darrel Beard's neighbors. He was inside
everything on the east side of Danelsville. The FCC wrote back with a
list of RF proof equipment. Well after writting another letter to the
FCC about Mr beard's stolen amplifier (thats another story) And the fact
that Mr.beard was operating out of the band, genrating harmonics with
the stolen amplifier, that no amount of filtering was going to stop
Mr Beard's interfeance. I sent the FCC Mr Beard's address Fred Borce was
the tech in charge and Mr Borce sent Mr Beard a cease order. Mr. Beard
laughed braged to the rest of his CB trash friends and continues to
operate. The FCC knows that Mr. Beard modifies CB radios to work out of
band they also know that Mr Beard modifies CB radios to over modulate.
The refuse to do anything with this Pirate but yet the bust a guy who
was jamming a pirate radio net. So now Mr Beard has moved right in the
middle of down town Danielsville and put his little CB repair sign out
in his yard and continues to operate. I bet he is everything. The cable
system in that town is real leaky too. OH boy! So you can beleive that
the FCC is going to something but the FCC isn't. So I hate to bust your
bubble. If I see where the FCC busts this person or others, (this guy is
the main reason Madison County and the genral area has amps radios that
work out of band. The FCC knows about this guy and refuses to do
anything!

Hello!
Does anyone have a experience of using ICOM's microphones SM-20 and SM-8?
Which one give better signal quality? I guess use it with IC-756. May be
exist better choice instead of ICOM's microphone for that TRX?

Thanks

Oleg

Yes. The government lowered the speed limit, and sales of CB radios took off.

Remember when kid's walkie-talkie sets used to use channel 14?

Didn't CB start out above 500mhz? I think they should have a discreet id,
like pl or a transponder. The customer who isn't being an outlaw would could
gain some new features, maybe aprs, or distance measuring equipment. And
getting away with freebanding would get a little more technical.

Have the shack clerk do a computer search of stores in your area and
one may still show up. If not....
it is a standard wall "frog" 12vdc with a 100mA output. The outside
of the plug is negative and the inner contact is positive. Should be
easy to find a frog with the voltage and current specs. The shack
sells all kinds of frog plug adapters and one of these should fit.
Good luck.

I use the Heil HM-10 (toggle switch between element #4 and #5). I
nearly always get good audio reports when used with the 756. I do
not use a mic pre-amp as I find the mic gain on the 756 is
sufficient. This was not true with the 726. A pre-amp is necessary.
All of these low end stock mics will do the job. To get studio
quality super audio you have to use mics that cost as much as the
rigs. I don't really see the point on side band unless you have bucs
to burn!

Gareth http://www.capecod.net/~gareth/n1msv.htm

How come when someone complains about lawless articles in publications they are accused of 1st amendment problems? The 1st amendment is protection against the government, not your fellow citizens. We have the right to complain about anything in any legal way. Putting publications who advocate breaking laws (or any subject a group dislikes: abortion, porn, ect.) out of business lawfully (boycotts, publicity, ect.) is not a 1st amendment violation. It is the American way...

143. Antenna Poles

I have a dream location for an antenna farm. I live in the Canadian Wilderness not too far from Algonquin Park in Eastern Ontario. I now have access to some 70 ft Red Pine poles. They need to be treated with chemicals etc and prepared to be put in the ground. I can purchased prepared poles but the priced is phenomenal. I am going to try a Rhombic. The last red pine poles lasted less than 3 yrs untreated. Anybody know how to treat Red Pine so it will last?

SB DX @ WW $OPDX.390
Ohio/Penn DX Bulletin No. 390

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 390
BID: $OPDX.390
January 4, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GOLIST, N1NG, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, AJ4Y, N4GN, NO4J, K6FCC, W7TSQ, K8YSE, K9MIF, KU9C, EP2FM, F5NOD, G3SWH, HB9CXZ, HB9HFN, JH1LPZ, LX1NO, OH2BH, OH2BVE, OK2AP, PA3BXM, PY2YP, VE8PW and YO2LDE for the following DX information.

3A, MONACO. "The 59(9) DXReport" states to look for Luc, I1YRL, to be active in January as 3A/I1YRL on all bands. QSL via homecall.

5A, LIBYA. 5A1IC has been very active over the past week, mainly on CW, 40-10 meters. Activity over the past weekend seemed to concentrate on 40/17/12/10 meters. In "The Daily DX" they report that the operators are a YL named Veronica/IK3ZAW and her boyfriend Martino/IK3RIY. QSL via IK3ZAW .

5Z, LAMU ISLAND. Jim/G3RTE, Phil/G3SWH, John/G3WGV and Rob/5Z4RL will activate Lamu Island on the northern Kenyan coast between February 17th and 24th. Lamu counts as AF-040 for IOTA purposes and has been activated only twice before. It also counts as 5Z for DXCC purposes, of course. The team will be active with two stations on CW, SSB and RTTY on all bands from 160-10 meters, with the exception of 30 meters, which is not permitted in Kenya. There is hope for a special callsign to be announced closer to their departure date. QSLs will be handled by G3SWH:
Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom or via the RSGB bureau. Donations towards the cost of the expedition are invited and may be sent to G3SWH.

EA8, CANARY ISLAND. Good friend and member of NODXA, Fritz/DL7VRO and other German operators have been active from here. Activity seems to have started around Janaury 1st. Activity has been on all bands, 80-10 meters, CW/SSB with operations on the WARC bands. Their length of stay is unknown at this time. Look for DL7VRO, DL3DRN, DJ4EJ and DJ8HD to sign EA8/homecall.

EP, IRAN. The latest news on amateur radio activity in Iran comes from Mr.Abdollah Sadjadian, EP2FM, who is in Iran. He reports that the Iranian PTT Adminstration has set up a station EP3PTT at their offices. This station is operated by some old time EP2s. The station is also operated by applicants who have passed the amateur radio exam (about 26 at present), but under supervision of the oldtimers. Mr. Jamshid Mansuri (EP2CN) and Mr Massod Adle (EP2ES) have devoted one to two afternoons per week to keep the station on fairly regular. Activity has been mainly on 20 meters. Khalil Ladjevardi, K6FCC (ex-EP2KL), has setup a Web page for EP (Iran) and it is as follows: http://www.qsl.net/k6fcc/AmateurRadioInIran.htm He also mentions a new Web page address and the latest information about amateur radio activity in EP-land is in process of being posted at: http://www.vtt.fi/ket/staff/komppa/ep.htm

FT5ZH QSLS (Special Mailing Procedures!). Lyon Dx Gang Association have announced the following important procedures in mailing for FT5ZH QSL cards:
1. All cards sent by bureau will be QSLed via the bureau.
2. All cards sent with sufficient postage will be returned direct, provided that the following new procedures are followed:

a) In order to speed up the return process, the postage and the envelopes will be standardized. The envelopes will be provided by the European Council, so PLEASE DO NOT SEND A RETURN ENVELOPE.

b) Instead, please send a printed address label with your QSL card. If you do not supply a label, then make sure that your COMPLETE and CORRECT mailing address is on your QSL card. If not, put it on a piece of paper ATTACHED to your card. If you have absolutely no way to produce a printed label, then the Lyon DX Gang will write your address manually on the envelope which will take longer for them to process.

c) Very important! All direct QSLs MUST be sent to the club address given below. Cards sent by mistake to the pilot stations will be forwarded via the BUREAU only, so this will be a very slow process. Here is the address: Radio Club de la Gendarmerie F6KDF, 292 route de Genas, F-69677 BRON CEDEX, France

FT5ZH log is NOW AVAILABLE at the following Web site:
http://perso.easynet.fr/~f5nod/ft5zhlog.html
Also, OPDX InterNet Subscribers will receive the FT5ZH expedition results (statistics) as an additional bulletin.

FW, WALLIS & FUTUNA ISLANDS. Cedric, HB9HFN, will be active as FW5FN next February/March (February 23rd-March 8th). His activity will mainly be CW on 160-10 meters. He has put up a home page where you can find more information (geography, schedules, material, logs, QSL, flight plan) about his DXpedition at: http://www.qsl.net/hb9hfn/pacific99.html

JT1A POST-CONTEST REPORT. A press release written by Martti, OH2BN, and provided by Tim, N4GN, announced the winners of the lucky-draw for three bottles of Mongolian vodka. Those eligible had made 6 band contacts

with JT1A during the CQWW CW Contest. The winners are: JA3YKC, JJ1VRO and ON5NT. The JT1A was a joint Finnish Mongolian operation. QSL via SCSDXT, Jouko Hayrynen, OH1RX. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

NEW PREFIX, VY0. Starting April 1, 1999, all VE8 stations within the new territory of NUNAVUT will change to the new VY0 prefix. Most of these stations (there are only 4 or so active) reside within CQ Zone 2. The new prefix will be permanently assigned to the territory of NUNAVUT, which comprises all of the Eastern Arctic. NUNAVUT (which means = Our Land = in Inuktituk) will be Canada's newest territory starting April 1st this year. The old VE8 prefix will be assigned to stations in the Western Arctic, Zone 1.

PACIFIC DXPEDITION. "The Daily DX" reports that two Hungarians, HA9RE and HA8IC, have announced that they are planning a DXpedition to several islands in the Pacific Ocean. Currently, plans are still being worked out, but they hope to activate West Kiribati (T30), East Kiribati (T32) and Banaba (T33) sometime between January and the middle of March. Operations will be on CW, SSB and RTTY with activity on all bands from 160-10 meters. More information/details is forthcoming soon.

QSL INFO AND NEWS.......
Bob, W7TSQ, reports that effective January 1, 1999, he will be QSL Manager for AH6PN/HR6. Also, Bob would like to remind all that the /HR6 is part of the callsign and all direct QSL requests will be answered directly. He states that he will not see the first log until mid February. Please remember to put a $0.33 stamp on the SASE. Cards without postage will be returned via bureau.

QSL Info Server Available Via The InterNet. To use the server, here are the simple instructions:
1) Send E-mail to qsl-info@datasync.com
2) Put the DX callsigns in the message body. Include only callsigns for best performance. Anything after the word "end" in the message body will not be looked up (useful if your E-mail signature contains a callsign).
3) Please don't use "reply" to send more callsigns to look up. Replies don't go to the robot server. Compose a new message instead.

Additions and corrections should go to the database maintainer:
Lothar, DL1SBF - packet radio address: DL1SBF @ DB0SDX.#BW.DEU.EU
E-mail: k9pes_ms@siiks.a1.bosch.de
Other comments, etc. to Ray, WQ5L rocker@datasync.com

Cesar, PY2YP, reports that he has received several ZZ2Z QSL requests and can not reply because he has run out of cards. He requests to please reapply to: Ron Lago (AC7DX), P.O. Box 25426, Eugene, OR 97402 U.S.A.

Many have been asking what the QSL route/address for XU7AAN is. There have been some reports that XU7AAN was operated by JH8CLU, but the QSL route is via JH8YZB at: Hokkaido-Contest-Club, P.O. Box 48, Tomakomai, 053-0000, JAPAN.

QSL Manager Luis, HB9CXZ, reports that he received the new QSLS for 4F3CV and HB5H just before Christmas (after a long-long wait). He states that he replied to all the QSL cards received direct and from the bureau (about 1500). He mentions also that he is waiting for QSLs from IK2GAO for the HB9RL and HB5RL operations. He feels that the cards should be received in a month.

John, K8YSE, reports that the QSL cards for FO0PAP and FO0MAC have not been printed yet. Please be patient and DO NOT RESEND CARDS.

QSL Manager change/update for BS7H, VK9XM, XZ1A and XZ1X. Steve, KU9C, announced this week that Kan, JA1BK, has asked him to pick up the QSL management chores for the following operations: BS7H 1995 operation, XZ1A 1995 operation, XZ1X 1995 operation, BS7H 1997 operation (Japan QSL requests only! All other requests via W4FRU.) and VK9XM. You can QSL any of the calls listed above via KU9C at this address:
Steve Wheatley KU9C, PO Box 5953, Parsippany, NJ 07054 USA
Any questions, feel free to contact Steve via:
E-mail - ku9c@ix.netcom.com
Phone - 973.829.1890
Fax - 973.644.5053

The VP8CRB DXpedition logs are on-line and can be found at:
http://no4j.com/nfdxa/logs/vp8crb.htm
Dave, NO4J, will be posting/updating the logs daily for the duration of Jan's (K4QD) stay. QSL info is also on this site.

Steve, CE3/NE4Z uses XR3Z during contests. All QSL requests for XR3Z should go to Steve via the CE bureau or direct to: Steve Sexton, Av. Larrain 7618, La Reina, Santiago, Chile

OH0AA cards should go to bureau or via OH0AA Call Book Address. OH2BVE is NOT the manager for OH0AA. OH0NC handles the cards in the OH0AA club station. The cards sent to OH2BVE will be returned to bureau system and forwarded to OH0AA.

Milan, OK2AP, reports the new OKDX Club Web page is now up and running. The Web page is designed especially for DXers with all kinds of info. The URL address is: http://www.okdxc.cz

T33, BANABA ISLAND. Just a quick reminder that Karl, DL1VU, is now active as T33VU. Some reports indicate that he will be active through January. Activity should be on all bands, but mainly on CW. Over the past weekend, he was heard on 10 and 17 meters CW.

T9 AND ZA (BOSNIA-HERZEGOVINA & ALBANIA) OPERATIONS. Daniel, YO2LDE, reports that he will make another trip to T9 and ZA to operate RTTY in February. Daniel hopes to stay in Albania for one week and in Bosnia-Herzegovina for two weeks. He also mentions that he is looking for

a little financial support for this operation from DXers. It would be greatly appreciated. QSL via YO2LDE, Daniel M. Vuescu, Zadei F3-1-7, RO-1700, Resita, Romania. Please don't send the QSLs cards via Bureau. He does have a QSL Manager for North American stations (USA, Canada, Mex., etc) which is KB5IPQ. Daniel also provides the following Web sites of interest for DXers:

The South-West DX Bulletin (weekly) with all news from around the World at: http://qsl.net/yo2lde/swdxnews.html

1998 and 1987 All QSL Managers listed in 1997 and 1998 at:
http://qsl.net/yo2lde/qsl97.html
http://qsl.net/yo2lde/qsl98.html

A list of all InterNet E-mail addresses and Home Pages of YO stations can be found at: http://qsl.net/yo2lde/adrese.html

TF7, ICELAND. Gulli/TF8GX, Manu/LX2LX and Norby/LX1NO will be active from Westman Island (EU-071) during the IOTA Contest 1999. Callsigns to be used are to be announced later. Activity before and after the contest, will be concentrated on the WARC bands and RTTY. For further inquiries, please send E-mail to: lx1no@bigfoot.com

VQ9, CHAGOS ISLAND (Update). Dale, W4QM, is now back on the air as VQ9QM as of December 29th. Dale had an interesting trip last week. As reported last week he was headed to the Persian Gulf on a ship only to be ordered back to VQ9-land (1000 miles out), and then they were ordered to return back to the Persian Gulf again. After heading back again, about 100 miles out, they were again ordered to return back to VQ9-land. (ed. Not much site seeing on this trip. More like a YO-YO ride.) Anyway, Dale has been very active on 10/12/20/30 meters CW at various times.

ZL9CI, CAMPBELL ISLAND DXPEDITION UPDATE. It has been reported that as of 0020z, January 1, 1999, the ship called "Braveheart" sailed with the ZL9CI team aboard. The team left from Wellington for a 7 day journey to Campbell Island. They feel it will take one day for setup, so start looking for them around the 9th. Don, N1DG, Pilot Station for ZL9CII, will keep us posted on the ZL9CI Web site: http://www.qsl.net/zl9ci
Here is a bit of news from the team: "Ron, ZL2TT, was scheduled to do the SSTV for us. As he is not making the trip and as we do not have the expertise to run SSTV, it will no longer be a featured mode on the expedition, sorry. All other plans stay intact including plans to upload logs daily to the Web page. Plan on at least a 24 hour delay to get the logs over Pacsat after operations commence. All logs will have a 24-36 hour delay in transmission."

Well, in my experience, CB is all but useless for any kind of meaningful communications. The truckers and off-roaders do use it for actual, useful purposes. Why not give the CB'ers more power capabilities on 11 meters so that it will be a more viable means of communications? The truckers and off-roaders will benefit and the public will benefit by having a better, no-license, communications alternative? Maybe increasing the legal power on CB to 10, 50 or even 100w would help make CB a better place to live....or not... OTOH, it could be a bad idea. Any thoughts?

Just my $0.02.

I agree. I guess we do not deserve a response.. After all this time,
I suspect the people at Newsline do not wish to respond.

Gee, I guess that few minutes of audio tape is REAL expensive...

(Especially when you consider all the replays around the country are
done at local volunteers expense and equipment.!!)

153. HELP: create QRZ web site info to QSL card label link

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-03 00:00:00 UTC
From: herndonNONONOSPAM@texas.net
Message-ID: <vBSj2.3972$hf.1213@news2.giganews.com>
Source record: 154131
Cross-posted to: rec.radio.amateur.misc,alt.ham-radio,alt.ham-radio.hf

I've figured it out how to paste information into Word 7.0a into Avery mail label forms to print out for QSL outgoing cards. My problem is to get USPS bar code information at the top of the labels, once the data is put into the label area.

I can do the envelope bar code stuff for each one, but this is a large amount of effort to go through to get a label to paste on a QSL card (not #10 envelope with new, higher postage).

Anyone have a technique or macro to do this?

Prefer email, because I don't often read this Usenet group, due to word wars going on, making it a very bad signal to noise ratio. <smirk>

Thanks from K5FNI,
Rick Herndon

Looking for a sweep generator. Must be 100-500MHz sweep..... let me know
what you have.
thanks,
Randy

158. Newbie question - questions....

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-03 00:00:00 UTC
From: Terry McCann <tmccann@en.com>
Message-ID: <zEVj2.1478$u47.45159512@news.en.com>
Source record: 154136

To start with I have always been interested in amateur radio. I am 43 now and I can remember , with fond memories, tinkering around with old CB's in the basement of my parents house. I think I had a droopy draws ant. fastened to a clothes post in the back yard. Still smell the solder... Anyway, it has always been a goal of mine to go for the general ticket but work or something always seemed to get in the way. I am bound and determined to achieve this goal in '99.

1st question. My wife and I will be moving sometime this year. What is a reasonably good antenna set up without going through the drill of a 60 foot mast in the back yard. What do people in apartments do? We own a house now but as stated we will be moving shortly and I think the neighborhood to which we will be moving would take a dim view of a large mast.

2nd question. There are a lot of different options open a general ticket. What are the best to explore? I don't think I would be into 2m.

3rd question. Brand names in used equipment? Best place to find these?

I guess I should look up a club in this area but with my work load and such I don't have a lot of extra time to attend formalized gatherings.

Thanks in advanced for any and all assistance.

Terry

Then whats to keep them from getting a 10 Meter Rig,Or eaven 2
Meters.Let them have the Children Band,They have Been
Bootleging on 11 Meters For Years,I Myself Bootleged on 11 Meters
Befor Becoming a Ham,Come on How many Hams Got Started on 11 Meters.
It.s Been going on for Over 25 Years.I can Rember Buying the Old
Crystal VFO's that gave the old 23 Chanel CB Almost the Whole 11
Meter Band Even Below 26.000 mhz.You know just between you and I
I hear better lanuage on CB than say 20 Meters,Why not go after
some on the so called Hams on 20 Meters.Let the Boys alone they
will Be 10 4 ing and good buding,Long after Many of our Ham bands
have been gave away to Commerical Business Etc. jdlj

I picked up a copy of the Jan '99 Popular Communications a week or so ago. The first thing I read was the "Tuning In" editorial. What a shock! Here was an article by the editor (Harold Ort) that was promoting the use of jamming devices in Japan for cells phones in a magazine called Popular *Communications*! "Hmm...how odd.", I thought to myself. Then, on page 42 the "Product Parade" column (also by Harold Ort), has an article about a quick clip belt holder for Cell phones, scanners, etc., with a photo of a cell phone on the holder. "What a hypocrit", I thought and put the magazine down. I won't be buying anymore copies of that rag.

What difference does that make to you, Burt? How does what these people
discuss on their weather list affect you or your family?

[by Burt]
<<<<
Should people think that a snowflake is more more important than human life be
left to think that?
>>>>
[by me]
Show me where ONE person on this NE WEATHER list (other than yourself) said
such a thing, and I will apologize to you on this and the other lists AND I
will meet you on the air and apologize to you there. Now, I'm not talking
about YOU writing something and say that *someone* send this to you, but sight
a list archive, or a name or list in DeJaNews or something where we can all
look it up. It will, of course, have to have been written BEFORE your
original *Re: Flames*, which made the list 98-12-29 07:32:36 EST.
==========

To which you replied;
++
First off we both know you would never apologize for anything to me no matter what I proved. If you look on ne.weather you will see where one fellow mentioned suicide because an expected snowfall did not materialize. Others have admitted they would miss a funeral to see a storm and far too mant cried because of a lack of snow.
++

Now, doing a search of NE.WEATHER in DeJaNews gets over 3300 matches listed as *recent*, and I haven't even tried *past* yet. Doing a search with AOL's search engine yields over 3600 matches. Perhaps, Burt, you can provide more information on your above posts. A date..., an author.....anything that will help narrow this down.

I am trying to prove you right, Burt, or are you too stupid to see that. But as I do these searches trying to prove you right, I keep coming across more and more people, in more and more unrelated groups, that all have the same opinion of you that I do. I will only speak for my self here, but we can have a show of hands, if you like.

My offer still stands.

I believe that we should anex 11 meters and stick them up above 440 MHZ
where they can do no wrong. Thats just my opinion I could be wrong.

> KU4UV
YES YES YES
I'm all for that! I think thought the independent truckers need a band
where they can do the trucker thing above 440 Mhz. That way there would
be no skip to QRM them. Line of sight is all they need. CBers arn't
supposed to talk to stations further then 150 miles so that would be the
way to go. I still don't understand what the FCC was thinking in 1958
when they opened the 11 meter band to the genral public. If that wasn't
stupid then what is. I mean its only human nature for a person to want
to talk to another person over 150 miles away if they here them. So
skipland is now born.

Mr. Fisher is bitter in general. Doing a little research, it is easy to find that it is not only people on ham radio list that share these thoughts about him, but people in weather lists, and people in divorce support lists. It seems that the only people that actually like him are his students, or are they simply sucking up for the grade?

Hmm...whats the problem??? Most (99%) of ham radios run on 12-14 VDC.
Your power supply (AC input) simply delivers DC therefore check the
output of your power supplies with a scope and see if any HF
ripple shows up. Chances are your PS is a switcher anyhow, and
won't pass any harmonics present in the 120 Vac integrated input.
As for a cheapo B&W TV, I ran one for many hours off a Triipplett
400w square Wave invertor without a hitch...The reasons are the
same as for the ham radios...A TV have a primary power supply
tranformer that first steps down (OR up) your AC, and then is run
through a supply with various DC rails where none of the original
input ac waveform passes.

>
It is about Lat: 29.79651 Lon: -95.49532 or 29deg 47'47"/95deg 29'43".
I got this by looking up your address on Yahoo maps and then comparing
the map to a map of Houston on the Tiger Map Server. This link will
take you to the map I used:

http://tiger.census.gov/cgi-bin/mapsurfer?&mlat=29.79651&mlon=-95.49532&msym=redpin&mlabel
=1502+Pech+Rd&murl=&lat=29.79651&lon=-95.49532&wid=0.025&ht=0.025

Accuracy: the lat/lon are with in 167 feet of the point marked on the
map.

This is a TS 530s. It has Tube finals. Pair of 6146s. High voltage supply etc. If it had solid state finals you would be correct in saying it should work on 12 volts DC. I wish it would. Paul N9EMX.

Hello All,

I own a Yaesu FT-847, and I LOVE it!!!!
It is the MOST owesome VHF\UHF rig ever!!!
DSP is great!!! Excellent for Satellites.
Also, it works great on HF.... Which I greatly enjoy!!!
I am trying to get other people's opinions on the FT-847.

What are your thoughts???
Anything is WELCOME!!!
Thanks & 73,

Mike KQ6MU

We (the hams) didn't want 11 meters back when it was stolen away. What
makes you think we want it now? Leave the CBers where they are. You will
not be able to get them off even if the FCC decrees it.

Remember Oris, back in the late 50s it was quite a trick to get a signal up on 460. Which is where the "class A" band was located, and basically still is. That fact plus the expense of a UHF radio back then was VERY prohibitive. The idea was to provide the "general public" radio communications, without the need for obtaining a amateur license (Class D). For several year's this worked just fine. We all know what happened in the 70s.

Yes of course ham radio is dying, even NASA knows it, that's why they carried yet another amateur satellite into space during the last mission. That's why the NorCal QRP club sold 2700 30m trancievers at $25 ea. Even the Russians know ham radio is dying, that's why they've been running SSTV from space and recently launched a commemorative Sputnik that transmitted messages recorded by students on 145.8215MHz

If your really looking for evidence of how the hobby is dying, look at the number of new kit mfg's there are, only 20 or so in the last 10 years. Clearly the people who wrote software like Hamcomm a PC based decoder for RTTY & morse could see the end comming, as well as a plethora of SSTV programs for amateur radio.

But if your are really not convinced, just look at the number of new rigs from Japan lately, dual and triple band VHF rigs, HT's with scanning capability, extended receive etc. Full featured rigs controlable from a computer, clearly the Japanese knew the hobby was dying.

What other evidence can you offer up Burt to show how ham radio is dying?

---------- Nat:

Those formulas drove me nuts. After carefully evaluating all the material
in those sections I resorted to a few wise decisions.

I chose not to do the calculations for the phase shift questions (a
calculation that I would be able to do well in all other areas of test).

Able to memorize a few testing areas where the formula only applies to about
three questions in the question pool.

Those formulas I needed to use to calculate I learned as a process on my
calculator. --- A series of steps to follow rather than trying to
understand the whole meaning of the formulas.

The forulas and further help are available by buying the ARRL book study guid.

To all radio amateurs

SB PROP ARL ARLP001
ARLP001 Propagation de K7VVV

WA4TTK has a new data file for his Solar Data Plotting Utility available at http://edge.net/~scraig/sol.htm. This has all the sunspot and solar flux data for the last ten years, through December 31, 1998. You can download Scott's freeware, or just update your data if you have fallen behind. The latest version of his plotting utility automatically sucks up the numbers from this weekly bulletin so it is easy to keep your data fresh.

With an updated data file covering a decade of solar observations, the beginning of the new year is a good time to look at some of the numbers and crunch them for some trends.

The average annual solar flux for 1990 through 1997 was 188, 205.2, 150.4, 109.5, 85.8, 77.1, 70.8, and 81, and for 1998 it was 117.9. We can see that the peak year for the last cycle was probably 1991 and the year of the quiet sun was 1996. The rise for 1998 indicates a good upward trend.

Here are some quarterly numbers for this year. The last quarter of 1997 had an average solar flux of 94.3. The average flux values for the four quarters of 1998 were 98.8, 107.8, 129.2, and 135.4. Monthly solar flux averages for May through December, 1998 were 106.7, 108.5, 114.1, 136, 137.7, 117.3, 138.8 and 150.1.

And what about last week? Solar activity was way up, with solar flux peaking at 184.4 on December 22. Solar flux values have not been this high in nearly six years, since February 9, 1993, in the last solar cycle. This was much higher than forecast in last week's bulletin, and exciting news for HF operators.

For this weekend, the solar flux for Saturday through Monday is forecast to be fairly high at 165 for all three days, and a moderate planetary A index of 8 for those days as well. This indicates

fairly stable geomagnetic conditions. Over the past week the most active days were December 26 and 29, when the planetary A index was 16. The quietest days were December 27 and 31, when the planetary A index was three and K indices were down to zero.

Over the next week look for the solar flux to stay above 150, dropping below that level around January 12. Solar flux should rise above 160 by January 18, and back to 180 around January 25. No big geomagnetic disruptions are predicted, but of course this is based only on what is known from the last solar rotation.

Have fun and good DX in 1999.

Sunspot Numbers for December 24 through 30 were 93, 84, 100, 156, 177, 136 and 186 with a mean of 133.1. 10.7 cm flux was 139.4, 144.4, 144.9, 166.8, 184.4, 182.8 and 179, with a mean of 163.1, and estimated planetary A indices were 3, 11, 16, 3, 5, 16 and 6, with a mean of 8.6.

The principle that Charles refers to is, I beleive, that if the feedline has a resistive termination you should be able to derive SWR from coefficient of reflection. It will have to be resistive at all frequencies however. This immediately rules out testing antennas.

The charger is just a plug-in AC adapter. Just follow the links on the radioshack website (product support or 'services' or something like that). Call the 800 number to order it. It will likely be rather expensive (for what it is). You may want to consider getting the specs on the AC/DC adapter (output voltage/current) and looking for something around the house, like a variable power supply, or something at walmart, that will do the same job. But be careful not to go too high up in voltage or you may fry the input zener in the charging circuit.

Then they're going to the wrong club. Our (university based) club
has plenty of young members (university aged, so mostly post-teen).
There are some "old salts" around as well, but they're all friendly
and helpful towards new members. The same goes for the people I've
talked to on the club's repeaters but never met in person.

How many of the 109 firms are still around today? How many of the 148 will be
around in 5 or 10 years? How many new ones will show up, only to be a flash in
the pan?

Hi,

Price reduced to bottom dollar... selling FT-900/at in pristine condition
for $725 plus shipping. Radio has built in tuner, keyer, and not a scratch.
Never mobile. '95 manufacture. sorry, no xtra filters or seperation cable.
.30-30 rx plus MARS/CAP. Works great and puts out around 110 watts.. Must
have prepaid money order on this one. includes hand mic, box, manuals,
orig. factory paperwork, reciept of orig. buyer from AES, etc.
thanks for the time!
Randy

i don't know if the trucking community is all that prevalent any more
either.

what with the new stuff they put on trucks these days for communications
plus things like cell radios...has CB been rendered obsolete?

Michael Brown wrote in message
<3729-368E0E45-9@newsd-111.bryant.webtv.net>...
10 Meters will always be like this as long as C.B.'s are manufactured
that are easy to modify, such as the RCI 2950 or many other rigs out
there, anyone with half a brain can modify these radios. Several years
ago, I called CQ on 10 meters one night and this guy came back to me
with a made-up callsign that didn't even sound close to being legit. I
asked him if he had a ham radio liscense, and he just started laughing
and said, "Well I better get off of here." I told him that I thought
that was a pretty wise move. What needs to happen in my opinion is for
the FCC to totally put an end to the manufacture of C.B. radios
altogether. Nobody short of the trucking communiy really uses C.B. for
anything, think about it folks. It seems to me like there are only a
handful of good companies still around that manufacture C.B.'s to begin
with, such as Uniden, Cobra, Midland, etc. I think if the C.B. band
became a relatively "dead" band, one day it could possibly be placed
back into the hands of the amateur community, call me crazy.

This is for the person or persons looking for one of those Handheld
ssb Cherokee AH100's... I believe I saw them at www.bills2way.com
for 190-something, with charger and battery... a far cry from the
499- that someone told you they cost. I dont know if they are still available
for that price.. but they were around xmas time. good luck.

Sounds like me too, was 43 when i got into ham radio after playing with cb's. I would at least go for an advanced ticket, well worth your and a lot more privileges on the bands. Antennae? I have a butternut vertical, ground mounted, about 26 feet in height, also a G5RV wire antennae, it is 102' feet long and about 35 feet in the air, mounted horizontally. Also have a 2 meter beam, it is smaller than a TV antennae. Icom, Yaesu, or Kenwood all make good radios, i have both Kenwood and Icom. The best thing to do is go to a ham radio store with a knowledgeable and compare them. The other is too look up your local club or go to a local radio store and meet people. Good luck and welcome to ham radio,
Gary AA3NP

I'm searching for the clinical term that defines the following behavior:

1)Thinks others are going to get "busted" by the FCC, yet his own personal misbehavior and radio law breaking FAR EXCEEDS any of his peers. He seems to think he's completely innocent and believes himself to be immune from prosecution.
2)Is critical of others appearance, such as homeliness and obesity....while he himself is no Tom Cruise, and has a striking resemblance to a beached whale.
3)Degrades other hams as "uneducated white trash", while he himself can't even put together ONE grammatically correct sentence on this newsgroup.
4)Has been known to use the word " I " an average of 20 times per transmission.
5)Calls others "racist" and "bigot", while he himself uses EVERY racial slur in the book.

Patient name: Richard Whiten
Patient callsign: WB2OTK

Need info for class paper at local university. Thanks.

You have to understand, when the Citizen's Band service was first developed sometime in the 40's or 50's, it was orginally placed in the UHF frequency range, then the FCC placed in in the 27 MHz band, and gave it 23 channels. Well, we now the rest, the band became crowed, and the FCC added an additional 17 channels to give everyone some breating room. That is what never should have happened, but apparently the FCC thought the amateur community wasn't fully using the 11 Meter band, so they gave it to the gfeneral public.

Source record: 154054

My brother has been a truck driver for over 30 years. He's mentioned on several occasions that the truckers don't use it nearly as much as before, but they DO use it... If for nothing else than to keep them awake by having conversations with other truckers traveling in the same general direction. Cell phones are only useful if you know the phone # of the guy in the truck that you want to talk to...and those roaming charges can get VERY expensive. However, cell phones are the preferred choice for breakdowns, emergencies, etc. CB is just for keeping awake and weigh station/bear reports these days. I doubt if an emergency call on CB channel 9 would EVER be answered.

Personally, I use it when I'm out four wheeling to keep in touch with the other vehicles in my group. It's proven to be an invaluable safety aid on MANY occasions.

IMHO, there's a valid use for CB, but it's minimal. Most of the Colorado Hummer Club and the national Hummer Club members have moved to the 152 Mhz radios to get better range and even the truckers seem to be putting together a push to move to radios that operate on more viable bands. Some are even becoming hams (legally or not, unfortunately), but until they all get together on one communications method, CB is the only "standard" they have.

Is is dying? Uh, maybe we should just call this, a, err, 'new phase.' I just hope ham radio lingers on through the next sunspot peak. Really, the clubs around here in the San Francisco East Bay seem pretty healthy, from my take on them.

As for the future, I'm actually pretty impressed, personally, by the 'Tapr-vision' of TCP/IP spread spectrum ham radio. I listened to a good hunk of the symposium stuff, and, by gum, it sure sounds like these guys know where they're going. Though the proof is going is going to be in the pudding, you know, and we'll see if this FHSS thing or whatever it's called is really going to work as advertised. This is only escape, I think, from the repeater grid-lock. You know, 10 Mhz of 70cm packed with private repeaters each with one guy sitting around waiting to tell anyone who, heaven forbid, says anything, "This is a closed repeater." Or maybe there's the open repeaters, with one person talking and another jamming.

In the alternate future where ham radio survives, I believe by 2010, we're going to have more users on spread spectrum/TCPIP than are on FM.

As for HF, I suspect we're going to head even more towards more of a 'radio-sport' kind of situation where traditional modes dominate, and the focus is on contests, and plain old dx-ing. Know what I mean? Like people still raced sailboats even after powerboats were invented. I think HF, and VHF propagation is interesting, in itself, in a way that the internet cannot be. Because, an antenna and a radio wave is an interface to the real, physical, world -- and that makes it complicated and subtle.

John,

I used to treat "lodgepole pine" poles commercially. We used to soak the part of the pole which was going to be in the ground with a heated (CAREFULLY, its damned near explosive) mixture of "creosote" 90%, kerosene 9%, and some type of fungicide/termiticide 1%. We'd heat it all up in a couple of 30 gallon drums (welded together end to end) and stick the poles in and let them soak about a week. We would then take them out, let them dry out (in the sun) and after a couple of weeks we'd paint them with molten roofing tar, wrap them with a coating of burlap (from burlap feed bags) and coat them with the roof tar again. I put up an antenna with one of these poles on the end farthest from the shack in 1962. It's still there today, but the top sags about 6 feet toward the house now. My dad uses the the (shortened by 6') ant for SWL'ing now. This is in Idaho, which has 4 seasons with a 95 degree summer. Untreated fence posts last about 4-6 years there.

Creosote should be available there. There is a huge creosote fence post treating company in Edmonton. I think soaking them in just kerosene and some wood treatment product. Here the lumber yards and home builders supply stores sell all of the above, including roof tar. Burlap (made from hemp fibres) may be a thing of the past, due to the insane plot to keep the worlds best natural fiber from displacing expensive petro-chem based fibers.

I think that for many old timers the ham radio they knew *is* dead. Those big beautiful boatanchors that glowed in the dark. The parts you could actually see and feel and solder in the radio. When you actually had to hunt DX. (no packet clusters) There was no such word as "kerchunk". Almost everyone you QSOed knew how their radio worked and frequently modified it to improve it and passed on the information. The demise of kit building (Heathkit) did signify the end for many, although many of us do keep our "Packards" around for old times sake. Don't get me wrong. Modern ham radio is alive and well. The new communicator generation can't be blamed for not working on their computer controlled solid state surface mount rig. Heck it takes an engineering degree just to figure out all the bells and whistles. I cringe when I hear some of the subject matter on the air these days, but everyone seems to be having fun so what's the harm. I've never gotten a report of drift or chirp on my modern $2500 radio. I guess that's progress, but also a little boring. In short: Ham radio is dead. Long live ham radio...

It is finally here.......After months spent enduring the garbage which has been spewed forth by the members of the flatus amateur radio team and the even more disgusting bunghole amateur radio foundation and their band of mealy mouthed, backstabbing, two faced lying malcontents. Decent law abiding amateur radio operators in Palm Beach County Florida have begun to take back their clubs and airwaves.

Fed up with the lies and innuendo which have caused considerable division amongst local ham radio operators and Palm Beach County Government. A cohesive effort to thwart the efforts of this virulent minority has come forward to stem the tide which is poisoning our hobby.

Recent elections in the West Palm Beach Amateur Radio Club sent a clear message to these groups that their brand of amateur radio guerilla politics are not welcome in Palm Beach.

The actions of W8WW, Joe Keller, W2QX, Steve Nichipor, W3UH, Andre Lavigna, W4UJ, Henry Felton, and KD4VBI, Sam Falco have caused the cessation of all traffic nets in the West Palm Beach Area. These same individuals have done serious damage to the long running West Palm beach Test sessions.

While this test team has been able to regroup and continue to operate, it is not without some damage to it's credibility. Membership in all of the major clubs and repeater groups in the area have suffered tremendously along with repeater traffic dropping to an all time low. Several hams who are currently under the employ of Palm Beach County Government and local municipalities have been the targets of investigations as a result of lies spewed forth by messrs. Keller, Nichipor and Lavigna.

As a result of these actions there has been a resurgence of decent amateur radio operators who have vowed to take up the fight against this insidious cancer which has plagued the hobby here in West Palm Beach. There is currently a loose confederation of hams who have begun to rally around this silent majority and move toward regaining control of ham radio, and sending forth the message that Joe Keller and his lying band of disgruntled malcontents don't speak for the the rest of us.

Keep tuned...more on the war to regain the hobby in West Palm Beach Coming soon.

In a message dated 98-12-31 15:02:23 EST, Scott Rosenfeld [NF3I] wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
CU on the bands. I started at 15 and am now 29 - best hobby in the
world because it can coexist and even mingle with everything else,
and give you a better understanding of how the world actually "works"
should you choose to pursue it.

Ever wonder how/why microwave ovens work?

We can actually experiment with resonant cavities and waveguides.

How about DSS dishes?

We can experiment with preamps, transmitters, and receivers and
converters.

How about shortwave propagation?

We can actually USE it, first hand.

How about TV transmitters?

We can BUILD them if we want.

When we see a young ham, we are seeing tomorrow's engineer or
physicist or computer scientist WHO CAN ACTUALLY SEE THE WORLD
IN A PRACTICAL WAY.
>>
And you know what? You can do all of the above without ever knowing 1
character of CW.

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
Think about what YOU have gotten out of ham radio. Try to
imagine, had you never gotten into it, how much less you'd
understand about

Physics
Electronics
Computers
Antennas

which, no matter how you want to see the world, are EVERYwhere!

Not to mention:

Psychology (ever been in a pileup?)
Perseverance (ever been in a pileup?)
Great ears (ever worked a really weak one?)

Friends all over the world
A new challenge every time you flip the radio on

Before you badmouth ham radio, think about what you've gotten from it without you EVEN KNOWING IT.

Ever gone somewhere and had lots of friends you knew or, maybe, had NEVER met in person, in advance of your trip, who'd be happy to invite you out to dinner?

Welcome to ham radio.

> Kevin
> KC0ESU
Kevin to make CB a better place would be to put it up above 440. You
have to take into consideration CB is over 4 million +. So To give those
idoits more power would be asking for a even bigger mess. Just think of
the interferance that they could really generate. Not to say the mess
that would occur when the band is open. I mean to tell you. Also I
wounder how many of those idoits would hurt themselves with that much
power. SO giving them 50 or 100 watts would be a grave error. Basicly
all they need is line of sight. The truckers would really gain from
that. SO GIVE THEM 25 WATTS OF AM AND 40 CHANNELS IN 220 OR 440 BAND.

I remeber my next door neighbor and I building antennas for our 27.125
Mhz walkie talkies and staying up all night talking back and fourth. I
also remeber Mrs Ingram given us a had time cause we didn't have a
license to talk on CB then in a 1 hour or so she would yell how about it
skipland this is the redbird in north east Maryland. Terry and I used to
drive the old bat crazy I bet she is dead now. I guess we were about 9
or 10 at the time.

>which we will be moving would take a dim view of a large mast.

I will assume that you are interested in HF (Short wave). You have
lots of options even if you don't put up a large mast (or tower).

1) a ground (or roof) mounted vertical antenna. These cover the 80m
though 10m bands (3.5 MHz - 30 MHz) and are about 30 feet high.

2) if you have a center suport and some horizontal distance you can
erect a dipole or inverted vee antenna. The overall length of such an
antenna is given by the formula 234 / frequency (MHz). The higher the
center the better, but 25 feet or more will work. Trees work great for
center suports.

>2nd question. There are a lot of different options open a general ticket.
>What are the best to explore? I don't think I would be into 2m.

That's really hard to say. What are your interests? Do you want to use
a computer on the radio or do you want to talk (voice) or send Morse
code? Do you want to communicate with other hams all around the world?
Do you want to compete in contests with other hams? Do you want to
just see if you can communicate with hams in as many countries as you
can, or do you just want to get on the radio and chat (rag chew) and
find out what's going on in other hams lives? Do you want to build
equipment? If so, do you want to build someone else's design or do you
want to design it youself?

>3rd question. Brand names in used equipment? Best place to find these?
Kenwood, Icom, Yaesu, TenTec. Drake and Collins are nice, but older.
You can find them listed in some newsgroups, but you need to be wary
in your dealings. Most of the posts are legit but there's always one
or two to mess things up. For getting started you may want to buy your
used equipment from a dealer. At least you'll know who you are dealing

with and most have checked out the equipment and back it with a 30 day
or so money back return. I've had good luck buying used equipment from
Amateur Electronic Supply (www.aesham.com).

Hello
I have a Dentron 160 10L HF amp, Kenwood TS 820, PK 232MBX ver 5.I,
D-104 mic, would like to trade this for a Kenwood TS 50 or TS 530 or TS
830 or a TS 930. The Amp needs tubes. The tubes that are in it are
572b's but the amp will take 811a's. The rig could have the receiver
gone over. I'm running The PK-232 TS 820 and the amp on 7.1010 Mhz
packet station. If you are interested drop me a line with your phone
number. My call is N3CND and I'm good in the call book.

Here's an interesting comparison made by someone on the ham radio history email list: The March 1957 issue of QST listed 109 unique firms in its Advertisers Index while the August 1998 Advertisers Index had 148. That is quite an increase in numbers for an industry claimed by many to be drying up.

"Blues Clues" flycat@juno.com wrote: "TX fingerprinting 87% +"

I don't think it's fair to the science of fingerprints to
use that term when analyzing a transmitter's spectral output.
The two most important characteristics of one's fingerprints
are persistence (meaning the ridge formations remain the same
from womb to grave, and from injury to healing), and uniqueness
(in the 100+ years the science has existed, no two of the billion-
plus finger impressions investigated have been observed to be
identical). I have never seen any evidence that a transmitter's
spectral output satisfies the two characteristics of persistence
and uniqueness.

(It's interesting to note that the FBI receives over 27,000
fingerprint cards per *day* from contributing agencies.)

Hello, Oleg

I'm using an SM-20 with my 756, and get good audio reports. I did some on-air comparisons with the stock hand-mic, and a couple other mics I had lying around here, and the SM-20 was a clear winner. But I do not have a SM-8 available for comparison. I don't think I would have spent that much money myself, but it was a Christmas present from my wife. Besides, it looks nice.

264. Re: GFCI Circuit Help!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-05 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <76s45s$69l@bgtnsc01.worldnet.att.net>
Source record: 154068

As you probably know, the GFCI circuitry compares the current in the hot and neutral. If they differ, it trips. In other words, if the current finds a path to ground other than by returning on the neutral, it will trip.

You probably have a leakage current somewhere in your circuit. Maybe moisture sensitive for example which could make it intermittent.

Also, you have to make sure you do not have this wired in a configuration where two circuits share the neutral (otherwide called an "Edison: circuit I believe. For example, take three-wire conductor which has black, red and white. It's perfectly legal to use the black as the hot for one circuit, the red as the hot for another and they can both share the neutral. But doing so will violate the GFCI because the neutral current will in some cases not be balanced with either one of the hots.

Hi,
I am SWL and searching downloadable sound examples of "communication sounds" like RTTY, weatherfax, SITOR, SSTV, ACARS etc (*.wav files or any other format). Found nothing at dejanews.
Thanks for any hints
Andreas

Lets think this thing Out,Say the FCC Gives them A Little
Space Above or Eaven on 440.Who's going to stop them From Transmiting
on 11 Meters,as there Propaly more CB Than Hams.OR Eaven Pepole.Then
they Have the Best of Both Worlds.This would have Worked,if It
was done at the Start of the CB Band instead of now.They gave the
CB'ers A Small Prrtion of 11 MEters.A Great DX Band when The Solar
Flux is High.And told them not to USe it for DX.But they Did and Dis
and Did.HEars My Prposal,Give them The Whole 11 Meter Band from
26.000 to 27.900 They Already Have it Anyway.And Stop Bitching
about the CB'ers and Clean up some of your Own Bands like 20 Meters

I get all my tube needs from Antique Electronics:

http://www.tubesandmore.com

They are guaranteed, they ship fast and you can order via the Internet with
credit card info.

Hope this helps.

I allmost forgot about the motorcycle batter and the Laf. Micro 924 and
whip antenna with a light genarator to recharge the battery. My Mother
thought that I was nuts to put that radio on a bike. Oh my God my bike
was a chopper too. In fact my dad had a fit when I gave
old Bill Kirkland and John Mcfadden 20 bucs for the chopper forks. I
almost forgot about that bike. I used to ride around and talk on the CB.
I geuss I was 13 or 14 then. LOL!

I am with you! I want 11 back too. It is a great DX band as well as a
great E-skip band. Maybe they should form a class of ticket like the
NOcode geek Opps I mean nocode Tech you know like a no code novice
and give them privalges on 11 meters with a 5 watt limit then let
general and above go there with legal limit and put CB radio in a small
AM window above 440. Then open the whole top half of 27 to the hams heck
open 26-29.6999 completely to hams. WOW What a blast that would be.
That would be to easy and would solve the problem. I have a way to
solve the Mexican illegals. Just anex Mexico. Then companies whould have
to conform to US law and It would be cheaper to patrol the hon. boarder
then the texas border.
TOO EASY
Oris

Jim Martin wrote: "S97.101d says 'No amateur operator shall willfully or maleciously interfer with or cause interference to any radio communication or signal.'"

And with having S97.101d in place, you're probably wondering why the FCC would tell me over the telephone that transmitting over an illegal operator on 10m is not intentional interference. It might be that the FCC, falling back on own their definitions of "communication" and "signal," feel that the unauthorized transmissions made by the illegals don't fall into either of those catagories. (I believe the definitions are in Part 1 of Title 47).

Think of it this way, Jim: Suppose my transmitter is set to 7010 kc but its emitting a harmonic on 14020. If you choose to transmit on 14020, are you interfering with a communication or signal?

What if my transmitter set on 7010 is now emitting key clicks over all of 40m? If you transmit on say, 7250, are you interfering with a communication or signal?

Each color TV set has an oscillator operating on 3579 kc. Hundreds of QRPers utilize these crystals to make two-transistor transmitters. Are these QRP folks interfering with a communication or signal when they operate over the color television's 3579 emission?

Again, IMO, I believe that the FCC does not consider the "unauthorized transmissions" (FCC words) on 10m as "communications" or "signals," according to their definition of these terms.

Jim Martin wrote: "I've always disagreed with this supposed FCC official whom I believe is a fictitious character to begin with."

You can easily varify the validity of my statement by doing exactly what I did: Call the FCC's 800 number and ask for someone with expertise in the Part 97 regulations. Present the same scenario as I did: "Suppose an unlicensed operator is transmitting on an amateur band. Now suppose that a licensed amateur attempts to begin a QSO with another ham on the same frequency as the unlicensed operator. Is that ham committing intentional interference?"

The response I received (twice) from the FCC was that it's impossible to interfere with an unauthroized transmission. The FCC man did not say "unauthorized signal" nor did he say "unauthorized communication." The FCC apparently does not consider these illegal transmissions as either a "signal" or "communication." (The definitions of these terms appear in Part 1, I believe.)

Like you, someone else doubted the FCC response. They made the call. They received a similar response.

Jim continued: "To me the keywords are ANY and SIGNAL."

Don't use your own definition of "signal," Jim. Use the FCC's.

Yes, I know RS at one time carried amateur gear but then stopped, why? I don't know but the real question is why did they start back up if ham radio is dying. I'll go way out on a limb here and guess that a multi-million dollar company didn't decide to start selling amateur gear because they thought the hobby was dying. :)

Frank wrote: "How long will it be before they start interfering
with HF aviation traffic?"

Todd answered: "Well, they already do...on 5550 USB."

Some years ago someone on rec.radio.cb posted a list of HF "pirate"
frequencies, and extended an invitation to join him and other
priates on these great "skip" channels. I almost swallowed my
tongue when I saw that his list included the high-seas Air Inc
aviation frequencies (trans-oceanic flights utilize these channels
to pass periodic position and WX reports to Air Inc; Air Inc in turn
coordinates the courses and altitudes of these planes so they're able
to keep proper distance from each other, avoiding collisions). When
I pointed out to the posted that his list included aviation frequencies
and that interfering with aircraft communictions might result in a
disaster, I was flamed to a crisp. He showed absolutely no concern.

I'm considering composing a proposal that the FCC require each and
every transmitter be manufactured so as to emit a digital burst
identifying its serial number. Sellers will be required to register
the transmitter and purchaser. If such a transmitter is used in an
unlawful manner, the registered owner will receive a NAL from the
FCC. If the transmitter changes ownership, the previous owner,
not wanting to be responsible for the on-the-air behaviour of the
new owner, will surely voluntarily send in a change-of-ownership
notice to the FCC; if he chooses not to, then he'll be the recipient
of the new owner's NALs.

Motor vehicles are required to be registered, so I don't see why
transmitters shouldn't also be registered.

Jeff KH6OO / 7

P.S. Homebuilt transmitters will of course be exempt. Maybe this
will bring back a resurgence of home-brewing within the amateur
ranks.

Hi,
I am looking for information on TenTec RX325 or SP325. A military
surplus store has a used but
working SP325 on sale for $325. Is this a fair price ? I am looking for
a communications RX to use with
CW QRP homebrew transmitters in the 20, 30 and 40 meter bands. Will the
SP 325 serve my purpose ?
Please send replies to kc5tqs@hotmail.com and post as well.
Thanks in advance for all replies.

Regards,
Jay Samuel

I have a new Yaesu FT-50. I performed the Mars/Cap mod and it worked but have been unable to perform the "Freeband" mod which opens the radio up even more. Apparently the radio has been changed. Anyone know the workaround or another mod?

Many have noticed the countless posting of adds by KB5MER trying to sell his $600 six meter amp without any success. Several of us have responded to him in a professional manor with serious questions about his amp and were greeted with smart ass comments and the like. He feels it necessary to post constantly to the newsgroups thinking that some fool will purchase this amp from him. He should realize by now that it's counterproductive at this point to constantly harass the good reader's of these newsgroups since we feel that he has no intentions of ever selling his merchandise. If he would have responded to my questions in an adult manor he probably would be shipping this amp to me right now. But, we know now that his intentions are to spam the newsgroups and not sell his merchandise.

If he truly is the "good ham" that he claims he is he will respond to people's questions and comments in an adult fashion and post his adds in a manor that is not considered spamming. A good ham wouldn't post several hundred posts and harass all the people that respond to his adds.

He is also listed in the news.admin.abuse list if anyone cares.

I noted this thread on rram and think that this post I made from rrap is relevant, so I will repost it here. My apologies to anyone who is reading it twice.

Carl R. Stevenson wrote:

> Uh ... reality check ... the Tech class (no-code VHF) is the fastest
> growing class in ham radio ... it's also virtually solely responsible
> for slowing what would have otherwise been a disastous plumet
> into merely a significant decline in the number of newcomers
> entering ham radio.

Uh... reality check... The Tech class is the fastest growing class in ham radio, but if the W5YI report from Nov 1, 1998 is accurate, I would not call a 0.3% decline in the number of amateurs "signficant." I realize that "Amateur Radio is doomed" is a popular thread here, but I am shocked at you for falling into the trap, Carl. :-)

As to the "otherwise disastrous plummet," the same stats show that from Sep 97 to Sep 98, the following changes occured in the numbers of hams:

Type lic 1997 1998 % change
Extra 75681 76660 +1.3
Advanced 113398 110939 -2.2
General 125414 122461 -2.4
Tech+ 148392 146492 -1.3
Tech 176978 188528 +6.5
Novice 81982 74304 -9.4
All but Tech 544867 530856 -2.6
All but Tech, 462885 456552 -1.4
and Nov
Ex, Adv, Gen 314493 310060 -1.4

I am very pleased to see the growth in two classes of license, the Tech and the Extra. The former generally indicates that people are entering ham radio, although people were entering ham radio before the creation of the Tech, so I don't know why you are drawing conclusions that they are only doing so because the Tech is no code. If the reasons are as flawed as the pronoucement that you made about the "signficant" decline and the disatrous plummet, they are suspect, IMHO. Discounting the Novice license, which is generally seen as no longer being a mainstream entry point into Amateur Radio, there was a 1.4% decline over the cited time period in the classes other than Tech, not a "disastrous plummet" by any stretch of the imagination. Did you not do the math before you

made the pronoucement? (I corrected some math errors in the calculation of percentages, so my numbers are a bit different than Fred's.)

> Without the Tech class, we'd be down by many 10's of thousands
> in numbers.

Well, no. Without the Tech license, we are down 14,000, discounting the Novice (no offense intended to any Novices, honest, but the Novice has not been the entry point of choice for quite some time, so I feel comfortable discarding the data under these circumstances !) we are down 6,333. Both figurs are a far cry from "many 10's of thousands.

One can probably infer all sorts of things from these data, not many of which would be correct. For example, over the same time period, the delta in the Extra and the delta in the Tech+ were equal and opposite. On one hand, this would imply to some that high-speed CW increases interest in HF Amateur Radio and that slow-speed CW has the opposite effect. Well, maybe, but not for the reasons that one might think, I would imagine. Okay, let's manipulate another number, the Tech+ declined -- does this tell us that learning Morse code decreases interest in Amateur Radio? If so, explain the increase in the Extra. Does it tell us that getting hams on HF causes a decrease in interest? If I look at the historical growth of Amateur Radio, instead of these recent date, I wouldn't draw that conclusion. My theory is that we are seeing the dropoff of those who lost interest in Amateur Radio and more of the 10-year licenses are starting to expire. I have offered this here before and you have disagreed, so... let's cite the same report.

Elsewhere, Fred says that nearly 20,000 amateurs who were eligible to renew their licenses in that same time period did not do so, which is, according to Maia, 38% of those *eligible* to renew. The numbers are a bit suspect because there are some more math errors and the totals don't add up and, especially telling that some error has been made is the stat that only 4 Tech licencees did not renew and that number is quite low. I have some doubts that this figure correctly accounts for all upgrades and vanity call changes, but, if we take it at face value (and it is probably reasonably accurate), then we can, appropriately, I believe, draw two conclusions: Much of the decline in our ranks is from people who lost interst in Amateur Radio (or died), if 38% REALLY aren't renewing and we only dropped 0.3%, then there are a LOT of newcomers; 2.8% of the total. Why, that is not only not a disastrous plummet, is not a significant decline, but is an actual positive number -- people are still entering ham radio, although not at the record pace they did right after the Tech no-code was introduced.

These data don't show it perfectly, but it appears that 62% of those that enter Amateur Radio (100% - 38%) stay with it and either renew or upgrade, to extrapolate from the data I do have in front of me and I believe I recall seeing other data that indicate that the many hams upgrade their licenses -- well, yeah, if we have just under 20,000 newcomers, but the Tech class increased by only 12,000, then 8,000 must have upgraded, just in this time period. I admit, that these last

analyses are not accurate, but involve a few, not unreasonable, extrapolations and assumptions.

Now, for all I know, especially with the math errors I found, these data could be faulty and there may be better data that shows a more serious decline in our numbers. I used them because they were sitting on my desk from the circulating copy of the W5YI report. If so, I hope that better numbers and a better analysis will be forthcoming.

Even if I am a bit off in these quick estimates from available data, those estimates are a lot more accurate than "significant decline" and "disastrous plummet." I realize that you feel that Amateur Radio is in deep trouble if the code test is not removed, and in the long run, you may or may not be right, but in the meantime, I think it is counterproductive to jump the gun and pronounce that your doom and gloom predictions about Amateur Radio are taking place. They may be; this could be the leading edge of a disturbing trend, but analysis of these data could just as easily result in a conclusion that this is a statistical bubble or minor shift in the interests of the US public. It could also be related to the 10-year expirations starting to catch up with us. I think that any decline should get our attention and that we should all take whatever steps are appropriate to try to reduce that decline, but, IMHO, blowing that decline up much bigger than it actually is should not be one of those steps.

As an engineer, you should know that it is important to actually do the analysis. The mischaracterization of a slight decline the numbers of Amateur Radio operators may serve to bolster your position wrt code testing, but I do not believe that it bolsters the Amateur Radio Service in any way. It does, IMHO, deepen divisions that do not need to exist and fosters distrust at a crucial time in Amateur Radio when we need to work together more than ever.

Not silly at all.

Could be one of two reasons. Take your pick.

Reason one. Could be that Jerry Garcia, Elvis, and Buddy Holly are still
out there playing.

Reason two. On the other hand, could be that the capacitors in power supply
are discharging. Capacitors are devices that store an electrical charge.
Big ones store lots of charge, small one store little bits of charge. When
you unplug the radio, the charge "bleeds" off the capacitor and supplies
enough voltage to the radio to let it operate for a few seconds.

In the broadcast field, the VSWR of the transmitting system including
the transmission line and antenna is currently tested using an RF sweep
generator connected to a VSWR RF bridge or a directional coupler or
a power splitter. Since the signal to be measured is very weak, an
amplifier is usually connected between the measuring device and a diode
detector. Professional consultants who contract this type of measurement
will also use a Network Analyzer or a spectrum analyzer with a tracking
generator. Regards!

Did you enjoy on nbc news tonite...A
feature abt senior citizens having to sell their homes and move to
apartments due to rising property taxes in the affluent ares in which
they live...well the first story was believeable as the people lived in
sudberry,mass where taxes have skyrocketed due to prox to boston...but
the second story showed a couple in ny state...modest ranch house in
nice area...both man and wife had to come out of retirement and go back
to work to pay taxes which now take 14 percent of their fixed
income...but they made one mistake...they show the man in his hobby
room...a wall of ham radios on one side and a wall of computers on the
other...and the gear were not old either

Now pull out your calculators and figger what he has tied up in that shack

WIMPER WIMPER SOB SOB
BuBbA FEELS for the OTs.

Before you go to all this trouble try sci.geo.satellite-nav it is a
pretty good source of information on geolocation.

If I remember right you have to replace the mics resistor with a 1K
resistor. I did the mod 3 years ago and it worked.

Jay,

Where is the store? Could you give me some contact information? It's a great receiver, especially the military version, and I've been hunting high and low for this unit for a couple of years now. I say go for it -- I've heard some very good things about this receiver.

: --
: T. Ivers
The newer units have have the firmware rewritten to eliminate the
band-free mode.
What are the first 2 characters of your serial #...probably 7L or later, I
suspect.
I have an older unit(serial # starting with 6M) and band-free works fine.
In fact, I can select any of the possible countries band plans(which is
not normally useful, but it can be sometimes).
BTW, as for the CMT issue-add 90.2 Mhz to the desired frequency, and you
should hear the desired signals only SLIGHTLY worse than if you tuned the
actual frequency.

324. HF Packet station for trade

Hello
I have a Dentron 160 10L HF amp, Kenwood TS 820, PK 232MBX ver 5.I,
D-104 mic, would like to trade this for a Kenwood TS 50 or TS 530 or TS
830 or a TS 930. The Amp needs tubes. The tubes that are in it are
572b's but the amp will take 811a's. The rig could have the receiver
gone over. I'm running The PK-232 TS 820 and the amp on 7.1010 Mhz
packet station. If you are interested drop me a line with your phone
number. My call is N3CND and I'm good in the call book.

J Samuel:
Fred Osterman's 1994 publication only gives the radio two stars (5 is tops) in it's value rating and prices it at about $300. Other than that, I don't know how good it was. Daniel Grundberg might know if RN ever looked at the radio.

329. ARRL Pres W6ROD's comments revisited, with translations.

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-06 00:00:00 UTC
From: CBRambo@W6RCeicilA.net
Message-ID: <76uvna$r5u$1@usenet43.supernews.com>
Source record: 153977
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Looks like the last thing the ARRL Board of Fools wants
is to listen and carry out the will of the membership. The
Board conducted surveys of the membership and then does
the complete opposite. It makes me so sick I could just
vomit. HEY ARRL, you want to save money? You can quit
having elections since you won't truthfuly represent
your membership anyway. ARRL will destroy a good thing
if it means more money in their pockets.

Rod Stafford, W6ROD was shoveling Bullshit when he wrote:

>Thanks for your input about the ARRL's licensing
>restructuring and testing proposal adopted by the
>ARRL Board of Directors a couple of weeks ago in
>Connecticut. Let me see if I can shed some light
>on some of the reasons for the proposed changes.

(Translation: We dont give a damn about your input, only ours.
Sorry you wasted time filling out our survey.)

>I am certain that some hams will find change itself
>to be very disconcerting. It is our nature to like
>things the way they are and the way they were. We're
>generally comfortable with that and not comfortable
>with change. In many instances, we would like to return
>to "the good old days" of ham radio. However, there
>are some very real reasons why amateur radio has to make
>some changes if it is to be around in the 21st century.

(Translation: We need to make getting licenses easy.)

>As amateur radio operators, we're slipping farther
>and farther behind on the technology power curve, and
>people take note of that. Take a look at the primary
>modes of communication we use: SSB, FM, CW, etc. Each
>of those modes of operation have been around 50, 60
>or 70 years or more.

(Translation: We couldn't think of any new modern modes that
would be popular, so we couldn't submit any ideas
with our proposal. Hope No one noticed.)

>I was traveling by airplane not long ago and the
>person sitting next to me was a retired electrical
>engineer.

(Translation: Your dues bought my plane ticket. League
money working hard for you.)

>As we chatted I told him about my involvement with
>amateur radio. He had a ham license about 45 years
>ago. He was amazed hams still use SSB, let alone CW.
>He wondered why the hams didn't use some of the more
>"modern" modes of communications.

(Translation: Not surprising, they won't use modern modes eihther.
We know most Techs haven't and won't try
satellite or even packet!)

>This is a typical reaction. We have to change people's
>perception of ham radio being a pursuit involving 70 year
>old communication techniques. One of the ways to help
>change that perception is to modernize our approach to
>CW.

(Translation: We can heap Bullshit on the issue and say CW
strangled the institution of modern modes, and
CW is blocking technology.)

>We're not eliminating it, we're simply trying to put it
>in its proper perspective as we move into a new century.

(Translation: Are we bold enough to propose the total
elimination Of CW? No, but our proposed new
easy licenses will still please thousands
Techs, CBer's and other non-hams. We'll gain
their favor, and memberships.)

>CW will be around for a very long time as one of the
>modes of communication for amateurs. However, as
>an examination element, it carries much more weight than it
>should at the present time.

(Translation: We're losing membership dollars because many
potential members reject learning CW and won't
join us unless they can have HF for free. We
hear their cry.)

>proper perspective in the examination context as we try
>to bring amateur radio into the current technological
>environment.

(Translation: Hope we can fool our grass roots support, old timers,
and pro-code League members with this Anti-CW Bullshit
membership drive technology rhetoric.)

>I don't think there are many people who see CW as the
>future of amateur radio. If they do, in my opinion they
>are looking backwards, not to the future of ham radio.

(Translation: Pro-coders are backwards and their arguments
interfere with our membership drive.)

>And, as I mentioned, we're not eliminating CW. There
>will be plenty of people operating CW just as they have
>for years.

(Translation: We want to eliminate CW, but our life members
would die of shock. We'll call for the total
elimination of CW in our next proposal.

>Most non-hams think of ham radio as a hobby. And as a
>matter of fact, most hams think of amateur radio as a hobby.
>Sure, the League tries to stress the emergency communications
>and the public service aspects of amateur radio to those that
>are unaware of that role and people outside of ham radio do
>have some understanding of that role of amateur radio. It is
>certainly one of the first things I tell people about amateur
>radio if they have no acquaintance with the amateur service.
>However, the bottom line is we're viewed as a hobby.

(Translation: Maybe we should mix in some truth with the Bullshit.)

>The point is, we have some very valuable spectrum that is
>available to us for hobby purposes, and yes, even for our
>public service activities. It has become more and more
>difficult in recent years to justify retaining our spectrum
>from commercial interests who make some very good arguments
>as to why they should be allowed to use our spectrum for
>endeavors that will generate jobs, used advanced telecommunications
>techniques and put the spectrum to use for commercial purposes,
>not just for hobby purposes.

(Translation: Hope the commerical companies seeking spectrum
will believe us when we say ham radio will get
more technological and that we're not just
spreading more bullshit.)

>Even considering the perception that what we do is a "hobby,"
>we can counter some of that perception that we're "a dying breed"
>clinging to old technologies when we can show that amateur radio
>is a vital, growing activity. One only has to look at the statistics
>in the last few years to find that to be untrue. In recent years
>the average age of a active ham has crept up to nearly 60 years old.
>The growth rate of new hams coming into the service is at an
>all-time low of less than 2%. That doesn't even keep up with the
>"loss rate" of people who die or simply leave amateur radio for
>various reasons. The argument that we need to retain spectrum for
>the growth of amateur radio in the face of dwindling numbers is an
>unconvincing one to anyone, like the FCC and commercial interests,
>who takes a moment to look at the numbers.

(Translation: If we don't get new hams we're going to have to
swallow a decrease in our salaries. We can all

have raises when all those CBer's come on board
with the new easier licenses!)

>Taking these factors into consideration, the perception of ham
>radio is one of an aging group of hobbyists who use "less than
>state-of-the-art" communication techniques. We may not like that
>perception but that is what it is in many circles of the
>communications industry.

(Translation: Guess improvements in transmitter & receiver design
and DSP don't count as state-of-the-art if the
transceiver is sending CW!)

>The changes proposed by the League are not the total solution to
>the problem. We still have to make an effort to move into more
>advanced communication techniques in the near future. We need to
>take advantage of some of the more cutting edge modes of digital
>communication to allow for more efficient use of the spectrum.
>The Board of Directors is aware that merely restructuring license
>classes and modernizing the CW testing requirements is not the
>whole answer.

(Translation: If we must destroy ham radio to save it, then we'll
do it! Our jobs are at stake!)

>The League is going to have to take the lead in promoting
>technological advances within amateur radio even if it is just
>stressing the idea that amateurs put to use in amateur radio some
>of the techniques used by the commercial services.

(Translation: We can't promote technological advances now because
that darned CW mode keeps getting in the way.)

>And it's not just the League that needs a different mindset to get
>us into the next century with a vital amateur radio. For example,
>we might persuade repeater coordinators to give priority to
>sanctioning repeaters that are going to be using advanced digital
>modes rather than the 50 year old narrow band FM mode.

(Translation: Hmmm, We still can't figure out how to get hams to
accept the current new modes. We'll just say we're
working on it.)

>We might even persuade radio manufacturers to market HF radios that
>use other modes than CW and SSB as the primary modes of communication
>below 30 MHz. There are digital techniques that can be applied to
>the amateur service that would make more efficient use of the
>spectrum and minimize the interference potential between stations.

(Translation: We know a CW signal takes less bandwidth than other
modes, but we'll throw out this bullshit that there
might be other modes that are more spectrum efficient
than CW and see if anyone buys it!)

>I suppose the bottom line is we in amateur radio have to start
>thinking about the future and where we want amateur radio to be
>in the future.

(Translation: If our ham bands sound like CB channel 19, who cares?
At least we'll have more members.)

>Changes within ham radio have been suggested for quite a number of
>years. The pressure for change has been building. The FCC has had
>a continuing stream of proposals from individual amateurs to make
>significant changes over the last ten years or so. The League, for
>various reasons, has resisted such change, myself included. However,
>I think the proposal the League recently adopted will move us as
>amateurs in the direction we need to be going.

(Translation: Just send in a FCC 610 form for a Ham license. No
test required!)

>I also have to make a comment about the "motives" of the members of
>the Board in making such a proposal. Some have said the move was
>to make sure more radios were sold. Some have said it was to
>attract more members to the League. I can state without any
>hesitation that the Board acted in the best interests of amateur
>radio and for no other reason. Most all of the members of the Board
>have been amateurs for 35 years or so and some even much longer.
>These are not people who want to see amateur radio be hurt in
>any way. They don't spend 30 or 40 hours a week working on amateur
>radio matters for anything other than the benefit of amateur radio.

(Translation: We're concerned about our pocket books, and are as
crazy as Wayne Green.)

>I don't think there is anyone on the Board who cares how many radios
>Yaesu, Icom or Kenwood sell. Those companies are involved in other
>commercial activities and the amateur radio segment of their business
>is not large to begin with in the context of their entire commercial
>enterprise. If one or more of those companies should leave the
>amateur radio market, some other company will fill the void and market
>amateur radios. Of course, that assumes there is an amateur radio
>service.

(Translation: They'll pay us lots of Dollars to advertise in QST.)

>The League would certainly like to have more of the amateurs as
>members.

(Translation: But CBer's are just as acceptable.)

>I certainly don't dispute that. But that doesn't mean it
>will benefit any person on the Board if the League has additional
>members because we are volunteers to begin with. We don't get paid
>and we certainly don't get any bonuses if additional members join
>the organization. It actually means the League can provide more in
>the way of services to the members more than anything else.

(Translation: Our easy license proposal will make thousands of CBer's
feel welcome.

>The changes proposed by the Board are needed. Other changes along
>the lines that I mentioned are also needed for the amateur service
>to continue to be a growing, valuable service.

(Translation: More mindless Bullshit! We haven't a clue.)

>I would hope that you would consider these factors in assessing
>the need for and the effect of the League's proposal. There's no
>reason the changes are being suggested other than they are needed.

(Translation: With our proposal ham radio as we now know it will
be dead in five years and our ham bands will sound
like CB.

>I have resisted engaging in any debate about the pros and cons of
>CW and how it is or is not a filter for "quality" amateurs getting
>on the HF bands. There are plenty of people who will spend hours
>and hours debating that subject. I don't. Not only that, it misses
>the whole point of why the Board suggested the changes it did. If
>you have an urge to do that, I can suggest some internet newsgroups
>where that debate has been raging for years and with no satisfactory
>conclusion I might add.

(Translation: I won't argue with the hams who want the best for
ham radio, they always win!)

>Incidentally, I have drafted this response to send to a number of
>individuals who have written or e-mailed me on the subject of the
>restructuring and testing proposal so if a ham friend says he
>received the same response or it appears in electronic form
>somewhere, that is the reason.
>
>73, Rod Stafford W6ROD

(Translation: Send me your E-mail address and I'll pile this
Bullshit on you too!)

Har De Har, I suppose all the bootleggers/freebanders/QRMers/Jammers/hi-power CBers/etc are just too stupid to be able to build or buy some type of home-brewed gear and thwart your little scheme, ignoring of course the hundreds of thousands if not millions of units already out there that will still be usable for the next umpteen years. Maybe we could also make one register to buy RF power transistors or transmitting tubes as they might be used illegally?? <grin>

Don't quit your day job.

One thing to be careful about is the regulation. Almost all plug-in power supplies are linear mode and unregulated. Thus, an adapter rated at 12V 3A will usually be at 15-16V or so when only 100ma is drawn. But if it is rated 12V 100ma, it will be closer to 12V output when drawing the rated 100ma. 16V will likely fry the input zener and cause the nicads to vent, so the other person who cautioned about looking for the current rating is correct: Watch out for the current rating. But if you have a voltage regulated supply, then there should be no problem, no matter what the rated current is (except that it may charge more quickly, so watch out for overcharge).

Former Radio Amateur sentenced in Peterborough Ontario (99-01-05)

The following information courtesy Industry Canada:

On December 22, 1998, Christopher Watson of Peterborough (former radio amateur) entered pleas of guilty to the second and third counts :

Count 2:

And further that Christopher Watson on or between September 13th, 1996 and April 27th, 1998, in the City of Peterborough, and elsewhere in the Province of Ontario did unlawfully and without lawful excuse interfere with radiocommunication by interfering with link repeater systems contrary to the provisions of section 9(1)(a) of the Radiocommunication Act, R.S.C. 1985 Chapter 4-2, as mended and did thereby commit an offence under section 10(1)(a) of the said Act.

Count 3:

And further that Christopher Watson between January 1st, 1998 and April 27th, 1998, in the City of Peterborough, and elsewhere in the Province of Ontario, did unlawfully and without lawful excuse send false and fraudulent messages and calls on the radiocommunication system of the Ministry of Transportation contrary to the provisions of sections 9(1)(a) and 9(1)(b) of the Radiocommunication Act, R.S.C. 1985 Chapter 4-2, as amended, and did thereby commit an offence under section 10(1)(a) of the said Act.

The sentense imposed was a $500.00 fine and 3 years probation. The terms of the probation include that he is to keep the peace and be of good behaviour and not to posess any radio apparatus that is capable of transmitting any messages, tones, communications of any description except for ordinary household telephone equipment (the latter not including cellular telephones).

Any radio equipment in the possession of the Crown to be forfeited to the Crown.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! .....

>From the Editor's Desk: Hello, everyone! I hope everybody had a great holiday season. We look forward to another series of fun and informative EMCOMM bulletins and ACS Newsletters that will continue to bring all of us in emergency response just a little closer together. If you have any questions or comments, or have something you believe might be of interest to the group, please send it our way. Our EMCOMM Bulletins and ACS Newsletters are designed for you; we literally can't do this without all of you.

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....

Greetings all (again)
Special Attention System Administrators & Communications Sys. Admins
In August 1999 an issue is going to arise which *may* effect your Computer Systems OR Communications Systems. Midnight 8/23/99 GMT, the GPS (Global Positioning System) will reset to all zeros. This is called GPS Rollover. Silmultcast Communications Systems and some Syncronous Networks will be effected by this. Much like Y2K, when the GPS reads all zeros it is uncertain how systems will act.

Motorola's Simultcast Digital Trunking System is one system which WILL be effected by the rollover. The syncronization needed for Simultcast is provided by GPS and is input via a T1 (or E1 for Europeans) from the telephone company. While there is a back-up "clocking" mechanism in the system, it is not considered as reliable. Motorola does have a Firmware upgade availbale to deal with the problem. If you need this upgrade, then I hope your system is still under warranty, because it is rather expensive.

I am not familiar with Simultcast systems provided by other vendors, but your Sys. Admins and/or Communications Sys Admins should be made aware of the GPS issue, regardless of vendor.

More information can be found at the US Coast Gaurd Navigation Center Page:

Might mention in your next newsletter that the Jan-Feb '98 issue of 9-1-1 Magazine might be of interest to any of your readers in the disaster management field - among other stories on USAR, Swiftwater Rescue, and Public Safety Outsourcing, the issue focuses on disaster management and preparation via a feature story by Gunnar Kuepper of Emertgency and Disaster Management, Inc and a number of stories illustrating how products like GIS Mapping, Lotus Notes, Tabletop exercises and the like can benefit disaster planning and response.

Randall Larson Editor, 9-1-1 Magazine
.....

Current Events:

OES Report on Disaster Losses

The state Office of Emergency Service reported today that disasters losses totaled more than $50 billion in California from 1991 through 1998.

A spokesman says one of Gov. Pete Wilson's first actions when he took office in 1991 was a proclamation of a state of emergency due to a severe freeze.

Now, as he prepares to leave office, Wilson has issued a similar proclamation related to the current freeze. The OES says 271 lives were lost to the proclaimed emergencies -- earthquakes, fires severe weather, floods and civil unrest -- that have occurred during Wilson's administration. He has proclaimed 16 disasters that resulted in presidential disaster declarations, and eight other incidents as state-level disasters. Every county in the state has been included in at least some of the declarations.

Major disasters included the 1991 East Bay Hills fire.

Robert W. Sanford WB6NYC

From: Generadio@aol.com
Dave:

Please note the first Major Winter Storm that covered the St. Louis/metro area. Being the ESDA Coordinator for the Village of Freeburg and the EC for the St. Clair County ARES, we were kept pretty busy monitoring and coordinating "what ifs" during this first 7-15" snowfall of the year.

As the news media reported, the year's first major Winter Storm entered the area early on New Years Day with a combination of Snow, Freezing Rain, Sleet, and Rain accompanied by 20-35 MPH winds. The Freeburg ESDA office was following the storm before it struck and continued monitoring its progression across the area via radar updates and office weather instrument readings.

The National Weather Service offices throughout the midwest had seen the development of the low pressure system intensify as it dropped out of the Rockies and into the Texas panhandle area. On New Years Eve, the storm system was slowly gaining strength and then a wind shift and a drop in the barometric pressure occured early on New Years day to indicate that the storm center was now rapidly moving ENE.

Freeburg ESDA Coordinator Kramer contacted the Freeburg Fire Department Chief Lee Smith, to confirm their lists of personnel that had 4 x 4 and/or snowmobiles in the event the snow depth and/or ice accumulation would require the coordination of communications and manpower to potential medical emergencies. This operation was performed during the 1982 snow storm and part of the Freeburg ESDA Emergency Operations Plan (EOP).

The Amateur Radio Emergency Service (ARES) was also placed on "standby" with the potential use of amateur radio communication assignments to emergency vehicle assignments throughtout the Village and possibly the County. Local Village radio communications were maintained with the Department of Public Works Director Dittlemann and ESDA Coordinator Kramer in an effort to advise of current radar snow/ice plottings, as well as any changes in the "severe thunderstorm and tornado" Watch areas that came as close as central Arkansas at 2 AM on Saturday morning!

The Village was at the "center" of the low pressure intense storm system by Saturday afternoon as the barometric pressure dropped to 29.51" and this is when the sun broke through the thin cloud cover and the counterclockwise circulation "pulled" the main mositure area to the Northeast. Wind chill factors by Saturday evening were read in the ESDA office's weather instrumentation to levels of -18 degrees!

Submitted by Eugene Kramer, Coordinator
Freeburg ESDA

EMC165 Proclamation Example
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC165 Proclamation Example For Release 1/4/99

Many communications officials and volunteers work with the results of a proclamation of an emergency, but sometimes we really never get a chance to read one. In most instances the chief purpose is to obtain outside aid, financial and physical. Here is an example:

PROCLAMATION OF EXISTENCE OF A LOCAL EMERGENCY and REQUEST TO GOVERNOR TO PROCLAIM A STATE OF EMERGENCY

WHEREAS, County Code Section No. 3.79 of the County of Santa Lusia empowers the Director of Emergency Services to proclaim the existence or threatened existence of a local emergency when said county is affected or likely to be affected by a public calamity; and

WHEREAS, the Board of Supervisors has been requested by the Director of Emergency Services to ratify the proclamation of said local emergency;

WHEREAS, the Director of Emergency Services of the County of Santa Luisa does hereby find:

That conditions of extreme peril to the safety of persons and property have arisen in the County of Santa Luisa due to rainstorms, wind, and flooding conditions commencing on or about the xxx day of xxxxx, 19xx; and

That the aforesaid conditions of extreme peril warrant and necessitate the proclamation of the existence of a local emergency;

HOW THEREFORE, IT IS HEREBY PROCLAIMED that a local emergency now exists throughout said county; and

IT IS FURTHER PROCLAIMED AND ORDERED that during the existence of said local emergency the powers, functions, and duties of the Director of Emergency Services and the emergency organization of the County shall be those prescribed by state law, by ordinances, by resolutions of this County, and by the County of Santa Luisa Emergency plan as approved by the Board of Supervisors on xxx(month) 25, 19xx.

WHEREAS, it has now been found that local sources are unable to cope with the effects of said emergency;

NOW, Therefore, IT IS HEREBY DECLARED AND ORDERED that a copy of this declaration be forwarded to the Governor of xxxxxx(state) with the request to proclaim the County of Santa Luisa to be in a state of emergency; and further that the Governor request a presidential Declaration.

IT IS FURTHER ORDERED that a copy of this declaration be forwarded to the State Director of the Office of Emergency

Services

XXXX XXXXXXX, Sheriff, Director of Emergency Services County of Santa Luisa, Dated: xxxxxxx 0900 hours --- To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- For training assistance contact the ACS Training Officer at the web site or send an E-mail to David_Larton@oes.ca.gov _ For bulletin ideas, suggestions and comments E-mail to cary.mangum@macnexus.org or Cary_Mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for some bulletins. For earlier ones: ftp.ucsd.edu/hamradio/races EOM
.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

Yo! Bubba,

Would you have the geltlemen in question sell his gear to pay taxes?
Perhaps when you are an OT and at tax time you will have to sell your cb to
pay taxes. I doubt taxes on your dump could be very much, so tell me, does
the Department of Human Resources include enough in your welfare check to pay
it?

Jim-

I think the original premise was that an SWR Bridge was on order, and an alternate method was needed. Now, we have gone so far as to design a TDR, only to realize that it gives results that are only meaningful for a resistive load.

Since we have taken this approach, let's go a step further. Lets build the reflectometer portion of of the bridge in order to derive a voltage related to reflected power, which will be fed to the oscilloscope's vertical input. Now, let's take the oscilloscope's horizontal timebase "ramp" and drive a VCO that will cover the frequency range of interest. Using an open circuit on the Co-Ax, adjust the vertical axis of the oscilloscope for full scale. Using a good 50 Ohm load, verify that the reflectometer output is zero. If the horizontal axis can be calibrated for frequency, then we now have an "FDR"!

For Sale:

3 HT-600 vhf radios. Band split is 146 - ? (not sure of the top end).
6 channels.
1 P200 vhf radio - same specs as above.
3 1-hour chargers
1 slow charger
1 "RIB" box
1 cable for programing HT-600's/P200's etc.
1 cable for programing Maxtrac/Maratrac etc.
8 or 9 batteries, some just fair, some good.
Some extra cases, fronts, etc.
Sorry, no software...

Two of the radios have DTMF fronts. As I had an extra P200 case and
one of the HT-600 cases was not the best, I put it in the new P200 case.
All 4 radios work great with no problems. I currently have them on a
couple of ham freq's and public service freq's.
Can have programmed to your needs.
$875.00 includes shipping.
Please E-mail me if interested.

Alan N&#65533;NLB

Huh? For the same data rate, Morse code is less spectrally efficient
than many modes. Especially when decoded by people, who need
somewhat more than the theoretical minimum bandwidth to decode it.

Isn't it time we put this myth out of its misery?

SB QST @ ARL $ARLB001
ARLB001 Field Services, Educational Activities join forces

ZCZC AG01
QST de W1AW
ARRL Bulletin 1 ARLB001
From ARRL Headquarters
Newington CT January 6, 1999
To all radio amateurs

SB QST ARL ARLB001
ARLB001 Field Services, Educational Activities join forces

The sound of moving furniture, books, and equipment punctuated the holiday season at League headquarters as two ARRL departments prepared to merge into one entity. Effective January 4, the Field Services and Educational Activities departments consolidated to become the Field and Educational Services Department.

ARRL Executive Vice President David Sumner, K1ZZ, explained that the new department brings together staff members with similar missions and functions--primarily supporting ARRL volunteers who, in turn, support ARRL objectives and promote ham radio on a local and regional level. Working within a single department, Sumner said, HQ staffers could more easily share expertise, ideas, and resources. The move also was designed to reduce expenses in the face of a decline in both ARRL membership and overall Amateur Radio licensing and activity over the past year or so.

''The primary reason is efficiency,'' Field Services Manager Rick Palm, K1CE, explained in a letter to ARRL section managers. Palm will continue as the main contact person for section managers. He will focus on representing the League to the outside agencies it serves and on promoting and supporting the field organization.

Former Educational Activities Department Manager Rosalie White, WA1STO, has assumed the title of Educational Services Manager. She will oversee day-to-day operation of the combined department and will continue as the primary staff contact for Amateur Radio in space issues. ''We expect the greater efficiency of the combined departments to benefit our members by putting related resources in the same place,'' White said of the move.

To accommodate the change, employees from the former Educational Activities Department moved into quarters adjacent to the former

Field Services Department, trading places with the ARRL Book Team headed by Joel Kleinman, N1BKE. Now that the two departments are in the same location, staff members have begun to settle in and work as a team. Telephone and e-mail addresses for individual staff members remain the same.

ARRL Bulletin 2 ARLB002
From ARRL Headquarters
Newington CT January 6, 1999
To all radio amateurs

SB QST ARL ARLB002
ARLB002 K9JF appointed Northwestern Division Vice Director

James E. Fenstermaker, K9JF, of Vancouver, Washington, is the new Northwestern Division Vice Director. ARRL President Rod Stafford, W6ROD, announced the appointment January 6, following the recommendation of Northwestern Division Director Greg Milnes, W7AGQ, and certification of eligibility by the Election Committee.

Fenstermaker, 53, fills the position left vacant when Milnes, the former vice director, succeeded Mary Lou Brown, NM7N, as director. Brown died suddenly December 3. Fenstermaker's term expires January 1, 2001.

A ham since 1959, Fenstermaker was first licensed as KN9TZH. A DX enthusiast, he's also operated as DL5JF, OJ0SUF, and VP2V/K9JF. He's on the DXCC Honor Roll with 354 countries, 5BWAZ, 5BDXCC, and 160 Meter DXCC, as well as numerous contest honors. He's past president of the Clark County Amateur Radio Club and the Willamette Valley DX Club.

On the professional side, Fenstermaker is director of business services for the Parkrose School District in Portland, Oregon. He's a graduate of Anderson University and Indiana University and holds an accounting certificate from Portland State University.

Fenstermaker hopes to attend his first ARRL Board meeting in Houston, Texas, January 15-16. Members may contact him via e-mail at jfenster@pacifier.com.

I am assuming this is a radio that uses AC current.

The radio has a power supply which does several things. It steps the voltage down, it changes the voltage from AC to DC, it regulates it, and lastly, it filters it. The power supply has capacitors that filter out the AC component and just allow DC. What these capacitors do is store an electrical charge, somewhat like a battery, and then release it. When you unplug your radio, these filter capacitors still maintain a charge of electricity on them just long enough to make the radio play for a few seconds.

361. IC775DSP owners-HELP

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-06 00:00:00 UTC
From: (unknown)
Message-ID: <77111b$a5c$1@samsara0.mindspring.com>
Source record: 154009
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,alt.ham-radio.hf,alt.ham-radio.mods

I'm currently trying to decide on a new radio to purchase. I've given consideration to the ICOM IC775DSP. In my search for information I've uncovered some information on faults that this radio has, and am looking for someone who owns this particular model to give me some feedback. The "undesireables" are as follows:

***

The power control circuit in IC-x75 is an ALC circuit. ALC circuits suffers from several drawbacks:

slow reaction time due to time constants

insufficient regulation due to low feed-back factor

These factors gives the problem that if the average power has been set to a low value (e.g. for driving a
HPA), peak power can still be in the order of 3-4 dB higher. This leads to either considerable side band
distortion or a low average power output.

***
ICOM has chosen to remove the PBT in the later models, and replace it with a "data level adjustment".
This change removes the possibility to profit from the PBT in case of QRM or to use the PBT as a cheap
CW-filter.

Furthermore the two extra IF-mixings is done with only a minimum of filtering, making the receiver very
susceptible to spurious IF breakthrough. This is often heard as high-pitch tones or as a high IF noise
level.

***
Splitting into RX- and TX paths

Problem:

This is a general transceiver problem. If you want to use the transceiver as part of a bigger setup (i.e.
with external PA & preamp or with a transverter), it is convenient to have separate access to the RX and
the TX of the transceiver. Otherwise you need two coaxial switches every time you add a new
accessory. With split RX/TX paths you only need one switch - at the

antenna. Furthermore split RX/TX
paths eliminates the need for a change-over sequencer.

***
In these transceivers ICOM has chosen to shift the CW passband up 200
Hz compared to the SSB
passband. This makes it more difficult to copy SSB signals in CW mode.

***
Squelching is nice to have in FM mode, but it doesn't really work for
SSB, where you will be looking for
weak signals. Therefore you have to adjust the squelch level every
time you change mode.

***
For some modes of weak signal communication, it can be desireable to
have a very fast AGC (e.g.
meteor bursts with a sharp rise and a long weak "tail"). The standard
fast AGC has a time constant of
about 2 secs (!), which also means that a noise pulse can mute you for
quite some time.

Note: Never use the noise blanker when receiving high speed CW (Meteor
Scatter). The noise blanker
mistakes the high speed keying for noise pulses, and will seriously
corrupt the signal.

***
The RF GAIN function is different in FM and in SSB/CW modes. In FM
mode the RF GAIN controls a
PIN-diode at the input of the preamp. In SSB/CW the RF GAIN simply
activates the IF AGC.

These were located on a "mods page"
if you care to review them in full text, along with the "fixes", go
to: http://home1.inet.tele.dk/ehh/mods/index.htm
click on the *ICOM* followed by the *775* links.
True, all of the above problems appear to have a remedy, but not with
out having to go thru the radio and do an alignment afterwards. I
don't feel comfortable with doing this, personally. Thanks for your
comments in advance, even the flames, I guess.

73, Mike

Message-ID: <915750262.206156@cs1.sdd.hp.com>
Source record: 153866

Terry OM,

As a CW user for 43 years, I would recommend no software for learning
Morse Code. Use of software, tapes, etc; tends to make the a fun process
into a very boring one. Learn the letters and numbers and punctuation and
sending properly using a hand key and oscillator. Then just listen to real
contacts on the air with a receiver. Think of Morse characters whenever you
read anything, street signs, license plates, while driving, etc etc, and
sound them out aloud. The way to learn CW as just another language is to
use it, use it, use it, until it is automatic.
That is what worked well for me, and was the process described by ARRL
booklets of the 50's. Ain't really nothin' new.

73 and GL,

Don, W6JL
CW, CW mobile

Not me. I always just put a piece of black electrical tape across the VCR
clock. Then I couldn't see it blink. Does a low tech solution count??

375. Which radio to buy?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-07 00:00:00 UTC
From: DLoG <dloggins@mindspring.com>
Message-ID: <36956C97.5092@mindspring.com>
Source record: 153874

I'm looking to purchase a mobile with at least 50W. The mobiles I'm looking at are:
2 Meter - Icom IC-2100H, Yaesu FT-2500
Dual-Band 2m/70cm - Kenwood TM-G707A, Icom IC-207H, Yaesu FT-8500
I'm leaning more toward the 2 meter because I don't think I will use 70cm much, but I like the detachable face on the Dual-Bands.
Can someone please give me some suggestions on which is the best radio?
Thank You, Danny KG4BDF

>radio...

Things are what you make of them.

I have a car but I STILL like to walk. If I need to go somewhere
in a hurry, at least I have the OPTION of taking the car.

I rarely use the DX clusters because it seems like cheating to this
30 year old old timer. Sure, I CAN check them out, but I certainly
don't have to. They ruin the surprise for me.

Just because you have something doesn't mean you have to use it.

I still build kits and yes, they DO drift. Stopping this drift is
quite the learning experience in and of itself.

Nobody makes anyone buy any $2500 radio, you know.

<<When you unplug a playing radio, why does it continue to play for
a couple of seconds?>>

There is a Capacitor in the power supply.
A capacitor stores electricity.
Hence: Your discharging the capacitor when you unplug the radio.
One other thing.... Please do not unplug ANYTHING while it's still turned on.
You can cause damage by arcing (the flash when you unplug it).

I am using Windows 98 but not for packet. Nothing beats good old DOS
(am using version 6.20) Set up your computer for dual boot and use
your good old DOS program with DOS operating system. That is REAL
DOS. Windows 98 DOS is only an attempt to run some old DOS programs.
Some of them do not work properly in Windows 98 DOS.
Good luck you will not need because it works fine.

73 and Happy New Year 1999.

390. 14.300/3950 1999 Predictions!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-07 00:00:00 UTC
From: dx302man@aol.com
Message-ID: <19990107054532.00853.00009546@ng-fi1.aol.com>
Source record: 153931

Here are a few projections from our staff:

1. Several Liberty Net members will leave the 3950 group because of personal differneces

2. The Liberty Net will cease operation around June, due to the lack of support and the results of #1 above

3. K5ZU will elected "Jammer of the Year 1999"

14.300/14.313 predictions for 1999!

1. Porkbutt will be arrested on his outstanding felony warrents. He will serve up to 10 years on other Federal Charges.

2. KV4FZ will be fully vindicated and his license will be renewed.

3. Art Bell will join the B.A.R.F/Stumpjumpers! And will have KV4FZ as a guest!

Enjoy!
"Where's that big ol' DX302MAN?"
"I want to hear him listen tough"

Dear CBRambo,

Please take your Morse code rhetoric back to CB land. This is a Satellite newsgroup. Morse code, while useful, is not the issue for this newsgroup. Keeping the US Amateur VHF & UHF frequency allocations which these birds operate on is.

KC8FRJ
Christopher Cox

P.S. Congratulations, your mindless banter is working, the number of licensed amateurs in the US is down in 1998. The FCC will just auction of the hobby's frequency's following it's demise.

Since when does having a Ham Radio license have anything to do with
technical knowledge?
This was true long time ago before the publishing of answers dumbing down of
tests and flashcards.
Many extras, advanced and other class licensees come to me to get
"technical" stuff done.
Be it as simple as to plug in filters for the radio, fix the amplifiers
with a simple blown fuse) or make pach cables.
Heck they do not even know how to run the features that are on the radios
that they own. This reminds me of people who buy a VCR and the clock is
still blinking after years of operation because they have no idea how to
program it. APPLIANCE OPERATORS that what they are.

Wake up people the sad truth is.... a Ham Radio license does NOT
automatically mean that the person is technically inclined. Tech or all the
way to extra anyone who can memorize simple things can do it.

John

397. FS - what is it?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-07 00:00:00 UTC
From: mark beutler <mbeutler@tds.net>
Message-ID: <3694C6F2.6104B290@tds.net>
Source record: 153938

Have noticed that many (the majority) of people posting stuff for sale may post an item by brand and model, then price or just model and price. I, for one don't always recognize what that item is by just the model, especially, since there have been hundreds of model number changes over the years. (or it has not been made in 40 years)

Suggestion: If you really want to sell the item, why not give a short description of what it is? I imagine that a lot more people might take interest if they know what they are looking at.

For example: "FS 901DM $350 plus shipping" (and this is typical)

I'm sure there are a number of people that know what that is and what it

is worth. A lot more do not. Too bad for the seller, since that is a fine old Yaesu HF band only transceiver that was one of the best of the breed at the time. (and is still a great rig for someone on a budget) Also, how many people are going to realize it has tube finals? Yah, I know, they can hunt it up on the internet. Personally, I figure if the seller can't take the time to say something about the unit other than "it's a 9 out of 10", why should I take the time to go find out what it is? I'd rather deal with someone who sounds like they know something about the rig and aren't just dumping equipment they bought cheap from a

widow or estate sale.

How about: "FS - Yaesu 901DM hf transceiver. rx ham bands only. covers 10-160 inc warc bands. optional 250Hz CW filter. tube finals."

If you were taking the item to a hamfest to sell, wouldn't you take the time to shine it up? What's the big deal about taking an extra 11 seconds to tell what the item is in an email?

Ok. Soapbox now put away. <g>

I built the Baycom modem from scratch and it cost about $20, there are a couple of companys that were selling kits, Ramsey was one, do a web search for "Baycom" the software is free. Hooked it up to an HT and ran Packet. I'm glad I didn't sink much money into it as my interest in Packet faded quickly.

Hi John,
It is very simple. Keep in your mind what supply voltage going across PTT key.
Only 3 wires from mic is using - red(mic audio), green(PTT line) and black(mic ground), its connects to pin 1,5,7of 8 pins female connector respectively(for IC-756 etc.)
Please, send any questions and comments to my E-mail: icho@softhome.net

If your computer has a 16-bit ISA bus sound card, you can run PC-FlexNet for an investment of three dollars or so, for parts to build a PTT interface which works from a COM port. You end up with a DSP TNC with characteristics superior to most commercially available TNC's today. So, it's the "best" and the least expensive, all at the same time.

For more info, go to my URL below and push the "FlexNet" button. Good luck!

John-

According to the Amateur Electronics Supply catalog, both Diamond and Comet make a duplexer that seems to meet your frequency requirements. They may not be small enough, and surgery may be required to replace RG-58 cables with something smaller like RG-174. I doubt you could remove the guts and put them into your own enclosure, but it may be worth investigating.

If your transmitter is very low powered and control is exercised from a close distance, then you may not need the amount of isolation such a duplexer would provide. Perhaps a simple high pass (series C, shunt L)/low pass (series L, shunt C) filter arrangement would suffice.

If power is low enough, one company that makes small filters, is Mini-Circuits of Brooklyn, New York (http://www.minicircuits.com/). Their phone number is (718) 934-4500.

energy is stored in the power supply to help regulate the power supplied to the radio to prevent power glitches or brief high power demands from the receiver from interfering with the operation of the radio.

the devices that do this job are capacitors. if this is a modern electronically controlled radio, it's probably better to turn it off with the power switch first to let the microprocessor go to sleep.

> thanks.....de n6aap.....

Remove the detatchable face and the bottom cover. Look at the pcb that is vertical behind the the front of the radio. There will be 5 sets of solder pads numbered 0-whatever. There will be 2 chip resistors on the first two pads, the rest are empty. Remove the resistor on the first pad (the one closest to the grounding spring-should be #0). Make sure if either of the green wires have been cut, that they are reconnected and insulated. Do a reset on the radio.

The new range should be
VHF 136-173.995TX 118-174RX
UHF 410-469.995TX 300-470 RX.

This is directly from the Kenwood Supplementary Info sheet ASI-0031 TM-V7A Beyond MARS Modification.

What a GAS is THIS GUY FOR REAL or WHAT ?
HAWDY HAW HAW...

Hello to the FT-847 group....

If these eight little holes bug you, here is a way to make them
appear finished off. If your not going to use this rig mobile,
then locating and modifying the screws to fill the holes may be
of interest to you. It takes a bit of time but the end result is
worth it!!

Order the screws from Yaesu for the FT-736, but be sure they
are the back and side screws, that hold the top and bottom panels
of the FT-736R. Part numbers are U20306007 and they are called
"Binding Head Screws". These screws are flat headed not tapered head
as the other 847 screws. Yaesu does have some problems determining
that there are indeed 2 different size screws for the FT-736R panels,
so be sure you tell them that you want the larger of the two,(same part
numbers!!)...then, trim the screws about 1/8 inch in overall length
as if you don't they will bottom out and will damage the inner
aluminum housing. If you use a grinder the heat may destroy the finish on
the new screws and you may want to repaint with gloss black Krylon paint.
Install the 8 screws and WALLAH! the holes will go unnoticed.

What a beautiful radio and filling the holes, kinda finishes off
the Yaesu FT-847 cosmetically.

Blubber WONDERS if he has PLUGS IN HIS EARS AND NOSE to make his HEAD look
finished off ?

Yupsir, ARRL membership BUILDS COURAGE. It helps you DO THE RIGHT THING. Reed on and see a DECENT HAM. Only one PROBLEM Bubba sees - why did the idiot cut off the guy who later ASSAULTED him ? Who is the CAUSE here- the assaulter or the cutter offer ? Buubba thinks they both met their match in each other.

A California ham was instrumental in helping police to nab an angry motorist who had seriously injured another motorist after being cut off on the freeway in mid-December.

According to an account in The Orange County Register, the angry driver followed the other driver for miles "before confronting him on a busy city street, shoving him under an accelerating big rig, and kicking him even after he had been run over." The account says that the angry driver and his two co-workers drove off. But they were caught later in the morning when Ed Greany, KB6DOL, of Corona, heard a broadcast description of the vehicle and then saw the men pass by. He notified police via ham radio, and they arrested Richard Snyder, 28 and two others on suspicion of attempted murder.

The newspaper said Snyder had a string of previous convictions, and his license had been suspended. The injured motorist was reported in serious condition.

According to the FCC database, the Greany household includes three hams: Roberta Greany, KC6AEP, and Michael Greany, KE6RDT. All are ARRL members.- thanks to Charlie Clifford Jr, W6QMY

426. IC-706MKII Microphones - Which ones will work?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-08 00:00:00 UTC
From: "Kevin S. Beebe" <kbeebe@divide.net>
Message-ID: <775nvk$5pt$1@news-2.csn.net>
Source record: 153818

Hi all,

I have an ICOM IC-706MKII radio which comes with a tiny little mic with no touch-tone pad. I've checked the Ham shops and they always suggest the ICOM HM-77a mic which is roughly the same physical size but has the touch-tone pad on the back with tiny little buttons. What I had in mind was something like what the ICOM IC-2100H comes with. I believe the model for the 2100H mic is HM-98a (??). It has a larger keypad and appears to have backlit buttons. That's what I really need since A) I tend to fat-finger the little tiny buttons on the HM-77 and b) I use it as a mobile and can't see the buttons on the HM-77a at night. I may have those model #'s wrong (no catalog here at work), but you get the idea.

Bottom line - Will the mic that is shipped with the 2100H work with the 706MKII?

Thanks and 73 de KC0ESU

Kevin

But Jones, that's one of the main arguments for retaining the code
requirement, that CW is so much more efficient than SSB.

The myth that we are "putting to rest for good" is that Morse code
is more "spectrally efficient" than any other mode. You could have
a Morse code to PSK31 converter for transmitting and a PSK31 to
Morse code converter for receiving and occupy 10% of the bandwidth
of 50wpm CW. :-)

ISS HAM GEAR INCHES CLOSER TO SPACE

The first Amateur Radio gear to be used on the International Space Station has moved a bit closer to its rocket ride into space. Although the inauguration of Amateur Radio aboard the International Space Station--ARISS--is at least a year away, the so-called Phase 1 ham gear is on a tight proveout and delivery schedule and is due at Kennedy Space Center in Florida by January 20.

Delays in the ISS program have put off the first crew deployment until next January. The first crew will consist of US astronaut William M. Shepherd, as the expedition commander. Shepherd is studying for his ham ticket. Accompanying him will be Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR. All three have previous space flight experience. The crew has been training for their launch on a Soyuz vehicle and a planned five-month mission on the ISS.

The interim ISS ham gear package will consist of Ericsson 2-meter and 70-cm hand-held transceivers set up for FM voice and packet operation, plus power supplies, cables, and accessories. Ericsson donated the commercial transceivers for the project, while the Italian ARISS team is providing the external antennas.

At this point, the equipment and accessories have been checked out in an end-to-end integration. Additionally, the transceivers have undergone EMI testing to ensure that they will not cause problems for other ISS onboard equipment. The radios also still must be programmed and labeled in accordance with NASA procedures and protocols for space flight. AMSAT members who happen to work for NASA at Goddard Space Flight Center have been doing the EMI testing.

Preparing to carry Amateur Radio gear for use aboard the ISS involves careful attention to detail all along the way. Crew safety is the primary consideration, but cost and crew time--and aggravation--also are important. "Because of the high cost of space travel, it's critical that hardware be thoroughly tested and documented," said Will Marchant, KC6ROL, AMSAT's human spaceflight hardware manager. "Flight crews frustrated by buggy hardware are also less likely to want to participate in Amateur Radio operations."

The qualification process also requires multiple versions of the same equipment. In this case, six complete hardware systems will be fabricated and configured. The complement includes one flight system, a flight spare, systems for training both in the US and in Russia, one for development and testing, and one spare.

ARRL Educational Services Manager Rosalie White, WA1STO, a member of the Space Amateur Radio EXperiment (SAREX) Working Group, said she was pleased that NASA was taking no chances during the qualification testing of the ham gear. "I think it's great that they're taking the time to do a detailed examination," she said.

Getting Amateur Radio a permanent berth in space aboard the ISS has involved efforts in several countries. The primary players include the US, Russia, the UK, France, Germany, Italy, Canada, and Japan. "The ARISS team is truly an international, democratic, organization and is cooperating to provide human spaceflight Amateur Radio operations to the entire ham community well into the next decade," said Marchant.

Amateur Radio has been manifested aboard the ISS as "necessary crew equipment." The cost of providing just the interim Phase 1 amateur gear for use aboard the ISS is expected to exceed $60,000. The total cost of putting Amateur Radio aboard the ISS is expected to approach $700,000, with funds

coming from the ARRL and AMSAT as well as from NASA.

Still unclear at this point are the actual frequencies and the call signs the crew will use from the ISS. The ultimate ISS ham radio complement--Phase 3--will include equipment to operate from HF through the microwave bands with SSB, CW, FM, packet, ATV, compressed ATV, and SSTV capabilities. The German team will supply a digitalker and full duplex repeater. Once aboard the ISS, Amateur Radio will serve as an educational tool through worldwide school contacts and as an outreach to the general public.

FIELD SERVICES, EDUCATIONAL ACTIVITIES JOIN FORCES

The sound of moving furniture, books, and equipment punctuated the holiday season at League headquarters as two ARRL departments prepared to merge into one entity. Effective January 4, the Field Services and Educational Activities departments consolidated to become Field and Educational Services (F&ES).

ARRL Executive Vice President David Sumner, K1ZZ, explained that the new department brings together staff members with similar missions and functions--primarily supporting ARRL volunteers who, in turn, support ARRL objectives and promote ham radio on a local and regional level. Working within a single department, Sumner said, HQ staffers could more easily share expertise, ideas, and resources. The move also was designed to reduce expenses in the face of a decline in both ARRL membership and overall Amateur Radio licensing and activity over the past year or so.

"The primary reason is efficiency," Field Services Manager Rick Palm, K1CE, explained in a letter to ARRL section managers. Palm will continue as the main contact person for section managers. He will focus on representing the League to the outside agencies it serves and on promoting and supporting the field organization.

Former Educational Activities Department Manager Rosalie White, WA1STO, has assumed the title of Educational Services Manager. She will oversee day-to-day operation of the combined department and will continue as the primary staff contact for Amateur Radio in space issues. "We expect the greater efficiency of the combined departments to benefit our members by putting related resources in the same place," White said of the move.

To accommodate the change, employees from the former Educational Activities Department moved into quarters adjacent to the former Field Services Department, trading places with the ARRL Book Team headed by Joel Kleinman, N1BKE. Now that the two departments are in the same location, staff members have begun to settle in and work as a team. Telephone and e-mail addresses for individual staff members remain the same.

SOUTH AFRICA TO LAUNCH FIRST SATELLITE JANUARY 14

South Africa will launch its first satellite, SUNSAT, January 14 from Vandenberg Air Force Base in California. The satellite will carry an Amateur Radio package, a high-resolution imager, precision attitude control, and school experiments as well as other payloads, including NASA experiments.

SUNSAT was built by students at the University of Stellenbosch, and its name is an acronym for Stellenbosch UNniversity SATellite.

Professor Garth W. Milne, ZR1AFH, heads the SUNSAT team, which has been in the US for several weeks preparing the satellite for launch aboard a Delta II rocket. The launch had been planned for today, but it was rescheduled.

SUNSAT will piggyback on the Advanced Research and Global Observation Satellite (ARGOS) built by Boeing. The ARGOS carries nine high-tech experiments that Boeing says "will demonstrate next-generation satellite technology."

Members of the Satellite Amateur Radio Club will be involved in control and monitoring of the satellite immediately after it's deployed. Eric Lemmon, WB6FLY, and Paul Fee, N6YCC, both of SARC, are on the Boeing Delta II launch crew. Lemmon says it's a matter of history repeating itself. "The Satellite Amateur Radio Club was founded more than 30 years ago for the express purpose of supporting the launch of OSCAR-1, the first Amateur Radio satellite," he said.

The satellite will have digital store-and-forward capability on VHF or UHF. Telemetry beacons will be on 436.25 or 436.30 MHz. SUNSAT also will have a voice store-and-forward capability that will be used for school demonstrations, according to SUNSAT team member Jan Koekemoer. He says the satellite carries two VHF and two UHF transmit and receive systems to maximize flexibility.

For more information on SUNSAT, visit http://sunsat.ee.sun.ac.za.

The launch will be carried live on shortwave and on various Amateur Radio frequencies by ZS6SRL. The shortwave broadcast will air January 14 1000 until 1130 UTC. on 31 meters (9525 kHz), 16 meters, (17870 kHz), and 13 meters (21530 kHz). The transmission will carry background interviews and live coverage from the launch site. QSL to SARL, PO Box 1942, Hillcrest 3650 South Africa; e-mail sarlnews@intekom.co.za.

ARRL DROPS SPRING VHF/UHF SPRINTS

The VHF/UHF Spring Sprints--traditionally held during April and May--have been dropped from the ARRL contest schedule. ARRL Contest Branch Manager Dan Henderson, N1ND, cites a lack of participation for the change. "Participation in the VHF/UHF Spring Sprints has never reached the level of a healthy national event," he said. "In 1998 only 200 individuals submitted logs spread across the seven frequency bands covered by the Sprints."

Henderson said budgetary constraints were another factor. "With the soaring costs and limited space available in QST and NCJ, the 1998 Sprint results were moved and made available to all on ARRLWeb,"" Henderson said. "We hate to drop the contest and would be willing to work with another group who would like to pick up sponsorship and running the sprints." But he said the League could not justify a decision to continue to devote staff time to a small event when it already sponsors several other more significant VHF/UHF events.

Many VHF/UHF events remain on the ARRL Contest schedule. These include the January VHF Sweepstakes, the June VHF QSO party, the August UHF Contest, and the September VHF QSO Party, plus two 10 GHz And Up weekends in August and September and the popular EME contest weekends each fall. Also, Field Day offers opportunities for VHF/UHF participation, Henderson pointed out.

For more information contact, Dan Henderson, N1ND, ARRL, 225 Main St, Newington, CT 06111; tel 860-594-0232; e-mail n1nd@arrl.org.

K9JF APPOINTED NORTHWESTERN DIVISION VICE DIRECTOR

James E. Fenstermaker, K9JF, of Vancouver, Washington, is the new Northwestern Division Vice Director. ARRL President Rod Stafford, W6ROD, announced the appointment January 6, following the recommendation of Northwestern Division Director Greg Milnes, W7AGQ, and certification of eligibility by the Election Committee.

Fenstermaker, 53, fills the position left vacant when Milnes, the former vice director, succeeded Mary Lou Brown, NM7N, as director. Brown died suddenly December 3. Fenstermaker's term expires January 1, 2001.

"I am excited to have the opportunity to serve the US Amateur Radio community as the Northwestern Division Vice Director," Fenstermaker said.

A ham since 1959, Fenstermaker was first licensed as KN9TZH. A DX enthusiast, he's also operated as DL5JF, OJ0SUF, and VP2V/K9JF. He's on the DXCC Honor Roll with 354 countries, 5BWAZ, 5BDXCC, and 160 Meter DXCC, as well as numerous contest honors. He's past president of the Clark County Amateur Radio Club and the Willamette Valley DX Club.

On the professional side, Fenstermaker is director of business services for the Parkrose School District in Portland, Oregon. He's a graduate of Anderson University and Indiana University and holds an accounting certificate from Portland State University.

Fenstermaker hopes to attend his first ARRL Board meeting in Houston, Texas, January 15-16. Members may contact him via e-mail at k9jf@arrl.org.

HAM BALLONIST TO SIT OUT ADVENTURE HE PLANNED

Bob Martin, KC5LHL, of Albuquerque, New Mexico, will sit out an around-the-world balloon attempt that he was instrumental in planning. Martin, a TV science reporter and helicopter pilot, said this week that he will stay behind when the Team ReMax balloon leaves Earth. The team had planned to make some use of Amateur Radio during its effort to circle the planet.

Unlike previous attempts, the Team ReMax balloon will travel near the outer edges of the earth's atmosphere at an altitude of approximately 24 miles. Martin told reporters that he originally felt the team could fly the mission safely with three people aboard. However, it was later determined that the balloon will need to carry additional ballast aboard to safely reach its cruising altitude, so one of the three crew members had to remain behind. Martin, who has worked on the project for more than a decade, elected to be the one.

The launch from Australia has been delayed by weather and technical problems. Still planning to make the attempt are Denver real estate developer Dave Liniger and Australian co-pilot John Wallington. The team has until approximately January 20 to take advantage of the right wind patterns. The voyagers will ride in a pressurized capsule suspended beneath the huge balloon. The crew is equipped with spacesuits from Russia. The trip is expected to take up to three weeks.

For more information on the flight, see http://www.remax.com.

HAM HELPS NAB ROAD-RAGE SUSPECT

A California ham was instrumental in helping police to nab an angry motorist who had seriously injured another motorist after being cut off on the freeway in mid-December.

According to an account in The Orange County Register, the angry driver followed the other driver for miles "before confronting him on a busy city street, shoving him under an accelerating big rig, and kicking him even after he had been run over." The account says that the angry driver and his two co-workers drove off. But they were caught later in the morning when Ed Greany, KB6DOL, of Corona, heard a broadcast description of the vehicle and then saw the men pass by. He notified police via ham radio, and they arrested Richard Snyder, 28 and two others on suspicion of attempted murder.

The newspaper said Snyder had a string of previous convictions, and his license had been suspended. The injured motorist was reported in serious condition.

According to the FCC database, the Greany household includes three hams: Roberta Greany, KC6AEP, and Michael Greany, KE6RDT. All are ARRL members.--thanks to Charlie Clifford Jr, W6QMY

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down this week--no surprise, since on one day the previous week the solar flux reached a new high for the current cycle. But the drop in solar was quicker than expected. Our last bulletin projected flux values above 150 until January 12, but January 4-7 flux values were 146.9, 136.5, 125.8, and 115.1. This represents a drop in flux values of nearly 70 points in a little over a week.

For this weekend, the projected flux values for January 8-10 are 115, 120 and 120, with a planetary A index of 12, 12 and 8. At least while solar activity has been dropping, there haven't been any disturbed days from solar flares or coronal holes.

Beyond this weekend look for a rising solar flux, going above 130 by January 16 and to 150 around January 20. Conditions are currently expected to peak around January 24 or 25 with solar flux under 155. This will be 27 days, or one complete rotation of the sun after the recent high in solar flux for this cycle.

This week had some interesting VHF news. N5JHV in New Mexico worked several VK2 stations on 6 meters on January 2 after a long opening to the west coast of Mexico. On the same day CO2OJ worked a number of US stations on the same band.

Sunspot numbers for December 24 through 30 were 93, 84, 100, 156, 177, 136, and 186, with a mean of 133.1. The 10.7-cm flux was 139.4, 144.4, 144.9, 166.8, 184.4, 182.8, and 179, with a mean of 163.1. The estimated planetary A indices were 3, 11, 16, 3, 5, 16 and 6, with a mean of 8.6.

Sunspot numbers for December 31 through January 6 were 135, 121, 107, 113, 94, 87 and 70 with a mean of 103.9. The 10.7-cm flux was 174.6, 167.2, 160.1, 154.5, 146.9, 136.5 and 125.8, with a mean of 152.2. The estimated planetary A indices were 3, 5, 7, 4, 7, 8 and 9, with a mean of 6.1.

Here are some path projections to Japan for the JA International DX CW Contest:

From Seattle: Check 80 meters around 0600-1800 UTC, with best conditions around 0830-1000 UTC. 40 meters should be good from 0600-1900 UTC. Check 20 meters from 2100-0130 UTC, and 15 meters from 2230-0030 UTC. The best bet for 10 meters is 2300-2330 UTC.

From Los Angeles: Check 80 meters around 0700-1600 UTC, 40 meters at 0530-1700, 20 meters at 2100-0300 UTC, 15 meters from 2200-0130 UTC, and 10 meters around 2230-0030 UTC.

From the mid-US: 80 meters looks good from 0730-1430 UTC, 40 meters around 0630-1530 UTC, 20 meters from 2100-0030 UTC, and 10 and 15 meters around 2230 UTC.

From Texas: 80 meters should open 0730-1400 UTC, 40 meters around 0700-1500 UTC, 20 meters at 2100-0100 UTC, and 15 meters around 2200-2330 UTC.

From Ohio: check 80 meters at 0700-1400 UTC, 40 meters at 0630-1500 UTC, 20 meters around 1530-1730 UTC and 2100-2300 UTC, and 15 meters around 2200 UTC.

From Boston: 80 meters should be open 0730-1300 UTC, 40 meters at 2030-2300 UTC and 0630-1430 UTC, and 20 meters around 1530-1700 UTC and 2100-2200 UTC.

IN BRIEF:

* This weekend on the radio: The Japan International DX Contest (CW), Meet The Novices and Technicians Day, Hunting Lions in the Air Contest, the QRP ARCI Winter Fireside SSB Sprint, and the North American QSO Party (CW) all are on tap for this weekend. Just ahead: The North American QSO Party (SSB) is January 15-17. See January 1999 QST, page 84, for details.

* Correction: The story "Educators 'Go the Grant Route' to Fund School Ham Stations, Programs" in The ARRL Letter, Vol 17, No 49 (Dec 11, 1998), misstated the location of Pajaro Middle School. The school is in Monterey County, California.

* Vanity update: The FCC in Gettysburg is working its way through the last of the 1998 vanity applications. The FCC reported January 8 that it had processed applications received through December 18. In the latest processing run, it granted 210 applications and shunted another 205 into the work-in-process or WIPs stack. The FCC says it received 1465 vanity applications during December.--FCC

* FCC assigns RM number to ARRL petition: The FCC has assigned a rulemaking petition ("RM") number to the League's petition for low-frequency allocations at 136 kHz and 160-190 kHz. The number is RM-9404. Those commenting on the petition should refer to this number when filing comments with the FCC. Among those commenting to date is Texas Instruments, which markets RF identification products such as the Mobil SpeedPass that operate in the 121-134.2 kHz range.

* Thomas departs ARRL: Brad Thomas, KC1EX, has resigned as ARRL Advertising Manager to accept a new position with another publisher. Thomas had served as the League's advertising manager for nine years and was a familiar face at hamfests and conventions across the US. We wish him good luck in his future endeavors.

* JY1 completes cancer treatment: Jordan's King Hussein, JY1, left Minnesota's Mayo Clinic December 29 after months of cancer treatment. Jordanian officials said the treatments for the 63-year-old monarch were successful. Hussein was expected to spend a few days at his home in the DC suburbs before flying to London. Press accounts indicate that Hussein underwent six rounds of chemotherapy since last summer to treat non-Hodgkins lymphoma, a cancer of the lymphatic glands. Hussein took time from his treatments to help engineer the Wye Plantation agreement between Israel and the Palestinians. JY1 has been heard on the air several times during his stay in the US, mostly on 20 meters.--Newark Star Ledger/This Week in Amateur Radio via The Hudson Loop

* New video includes 1935 ARRL HQ tour: Nostalgia buffs will certainly enjoy watching a 1935 tour of ARRL Headquarters--narrated by retired ARRL staffer George Hart, W1NJM, and included in the latest League video, Volume 9: Amateur Radio History. Also included are segments produced by the Antique Wireless Association about the early days of Amateur Radio. Relive the 1921 transatlantic tests and see 1BCG--one of the earliest Amateur Radio stations. Maj Edwin Howard Armstrong, inventor and Amateur Radio pioneer, is depicted in slides with a commentary. All videos are $12. To order, contact Margie Bourgoin, KB1DCO, 860-594-0267, e-mail mbourgoin@arrl.org, or write her at ARRL EAD, 225 Main St, Newington CT 06111.

* QST Cover Plaque Award: Joel Thurtell, K8PSV, is the winner of the November 1998 QST Cover Plaque Award for his article "Zenith's 'One-and-Only' Ham Receiver." Congratulations, Joel!

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

433. FS: Colorado Big Gun QTH

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-08 00:00:00 UTC
From: Stan Huntting <stan@sni.net>
Message-ID: <775shv$8pc$1@news-2.csn.net>
Source record: 153825
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.swap

In 1991 I realized a dream as old as my novice ticket: a station with a big gun antenna! I've had a ball with it but now I'm ready to realize another dream: to retire to live in the mountains. My Boulder, Colorado QTH will soon be listed for sale with my favorite realtor. But first, I want to spread the word of this rare opportunity.

Obtaining the permit for a tower in Boulder County is about as difficult as making DXCC Honor Roll. But I have just such a tower: 87' of Rohn 55G and mast, HyGain HDR300 rotator and a 10-element Tennadyne Log-Periodic. The tower permit stays with the site. And, the site is something else.

This QTH sits on the high ground between Boulder and Boulder Reservoir with commanding views in all directions. But, the signal radiated from this site defies simple analysis-it is a big gun antenna on a big gun QTH!

The house will sell quickly when listed. It's a comfortable and spacious home, on a acre of pastoral splendor within minutes of downtown Boulder. Hardwood floors, HW heat, passive solar, two offices, heated shop, unfinished basement...

Until it's listed, as a concession to an early buyer, I will include the tower & antenna with the property. Asking price is TBD but will be in the $500K range. Qualified buyers are urged to contact me directly. Pass the word. 73,

Stan Huntting, KW7KW

Well..... OTOH, you could just learn the code. What a plus! Then you could move up from just a listener to a participant. Now, *that* would be real fun!

It's nice that the alleged bad guys were caught by the cops.

However, Mr. Greany's use of ham radio here seems to me to be an incidental, almost trivial, aspect of the story. Surely he or any member of the public could've notified them just as efficiently by cellular phone or other common carrier. It's like noting that Greany was driving his Chevrolet Caprice when he witnessed the incident & called it in. Noteworthy if you're a Chevy enthusiast, I suppose, but otherwise inconsequential and certainly no inferences may be drawn about Chevrolet Caprice owners from such an insignificant sample.

442. .Help needed with archives of the ham-ant mailing list

<<
Subj: Help needed with archives of the ham-ant mailing list
Date: 99-01-08 18:45:25 EST
From: brian@ucsd.edu

If you have a mirror or other collection of the archives of the ham-ant
mailing list digest that were kept at UCSD, I'd like to hear from you.

A disk failure early today brought to our attention a problem with
the mail list archives AND their recent backups. Both are unreadable.

I am attempting to restore the archives from older backups, but there
is a high probability that I won't be able to do so.

If you have a collection of the digests, and are willing to
them to me, please e-mail me a short note describing what
you have and in what form it is stored. I'll contact you to
arrange the actual transfer.

I appreciate your help very much.

443. Mobile HF Ant. impedance?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-08 00:00:00 UTC
From: Ken Barker <kenbNOSPAM@tyler.net>
Message-ID: <7765so$1k5$1@remarQ.com>
Source record: 153835

Dumb beginner question: It has been so long since I have gone HF mobile I have
forgotten the characteristic impedance for a center-loaded HF whip. Can't decide whether I should use RG58 or RG59 cable. ARRL handbook not much help.

I will be using some old Hustler antennas with switchable resonators for 80 thru 10.

Can't find the company that makes Hustler on the web. Anybody know what happened to it?? Or where I can find info on these antennas?

Ken K5OFC

Good mobile antennas vary from about 10 ohms to about 50 ohms. Use 50 ohm coax
and capacitive/inductive/unun matching on the lower bands (75m and 40m).

January 8, 1999
Target: rec.radio.amateur.*

This newsletter is available online at http://www.qsl.net/w8mmq/ and is updated weekly. There is also an archive of past newsletters available from this website.

Welcome to the W8MMQ Wire, for January 8, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: the VHF/UHF Spring Sprints are no more; ARRL petition gets rulemaking number; ham radio numbers declining; upcoming contest information; and much more!

THE VHF/UHF SPRING SPRINTS ARE NO MORE
Citing a lack of interest, the American Radio Relay League has decided to drop the VHF/UHF Spring Sprints from its contest schedule. The contests were held each year during April and May.

Dan Henderson, N1ND, the ARRL Contest Branch Manager, says that only about 200 people submitted logs for the 1998 VHF/UHF Spring Sprint.

Henderson said that the League would be willing to work with another group or organization that would like to pick up sponsorship of the contest, but that the "League could not justify a decision to continue to devote staff time to a small event when it already sponsors several other more significant VHF/UHF events."

W8MMQ/KC8KFZ (Information taken from the ARRL Letter, 1/8/99)

ARRL PETITION GETS RULEMAKING NUMBER
The Federal Communications Commission has assigned a rulemaking number (RM number) to the ARRL petition for low-frequency (LF) allocations at 136 and 160 to 190-kHz.

The ARRL has announced that the petition has been designated RM-9404.

On November 3, 1998, the ARRL announced that it had filed the petition. It requests the Commission to create the two LF amateur allocations for the purpose of "experimentation with equipment, antennas, and propagation phenomena in a small segment of the radio spectrum that has not been available to the Amateur Service for many years."

Comments on RM-9404 should be directed to the FCC, at 1919 M Street NW, Washington, DC 20554. The FCC can also be emailed at fccinfo@fcc.gov.

For more information on the ARRL, and this petition, visit their web site at http://www.arrl.org.

W8MMQ/KC8KFZ (Information taken from the W1AW Bulletin, 11/3/98)

JY1 COMPLETES CANCER TREATMENT
Jordan's King Hussein, JY1, left Minnesota's Mayo Clinic December 29 after months of cancer treatment. Jordanian officials said the treatments for the 63-year-old monarch were successful.

Hussein was expected to spend a few days at his home in the DC suburbs before flying to London. Press accounts indicate that Hussein underwent six rounds of chemotherapy since last summer to treat non-Hodgkins lymphoma, a cancer of the lymphatic glands. Hussein took time from his treatments to help engineer the Wye Plantation agreement between Israel and the Palestinians.

JY1 has been heard on the air several times during his stay in the US, mostly on 20 meters.

Taken from the ARRL Letter, 1/8/99

HAM RADIO NUMBERS DECLINING
The numbers for 1998 are in, the trend is downward and the outlook is not very good for the future of Amateur Radio. This is the gist of recently released FCC figures on the number of Amateur Radio operators licensed by the agency. And if the figures hold, 1998 will have been the first year of actual decline of the total number of United States radio amateurs in the past two decades.

A year ago there was a total of 719,331 licensed radio amateurs listed in the FCC's database. Twelve months later that figure has dropped to 718,241. That's a drop of 1090 hams or a .2% annual rate of attrition. And while it might not seem very significant, 1090 is more hams lost in the United states than are licensed in some other nations.

Looking at the percentage rates gives even more reason for alarm. Since 1992 when the annual growth rate was a healthy 8.4% a year the trend has been steadily downward. In 1993 it had dropped to 7.3%. By 1994 to 6.7%. 1996 had the most dramatic drop to a minuscule .8% growth and now as we begin 1999 we are into negative numbers.

And negative numbers means that the ham radio bands are more vulnerable to attack from the corporate raiders in the telecommunications industry. These are people who envision millions of dollars of profit by evicting hams from the bands above 50 MHZ and having that valuable spectrum reallocated to their use.

It also means that the government itself might begin to think in terms of the millions or billions of dollars that it might garner by auctioning off some of our bands.

Finally, on another level it means that there will be less interest by companies in introducing new equipment. As any manufacturer will tell you, it makes no sense to put money into research for new products for a market that may soon die away.

Taken from Amateur Radio Newsline, 1/1/99

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The North American QSO Party, CW portion, sponsored by the National Contest Journal, will run from 1800-Z on January 9 through 0600-Z on January 10. Operate CW mode only!

The Michiana Valley Hamfest Association will be hosting the South Bend, Indiana hamfest, on January 10, 1999. For more information, contact Bob Denniston, KA9WNR, at 219/291-0252.

DX REPORT
From the Ivory Coast, I2AOX and IK2CHZ will be active from the 12th to the 25th of January from TU5IJ's QTH. They will be on 10 through to 80 metres and possibly 160 metres and the WARC bands, using CW and SSB.

From Chagos Island, VQ9QM will be on the air until March on the HF bands, including 160 metres. This counts as AF-006 for the RSGB Islands On The Air award programme.

And from Banaba Island, T33VU is now active. This counts as OC-018 for IOTA.

The DX news reports listed above came from the weekly RSGB DX News Sheet, editied by Chris Page, G4BUE.

Taken from the Radio Society of Great Britain

FCC-WATCH: RECENT COMMISSION ACTIONS
The FCC has issued a second warning to owners of radio antenna towers. This, after an ambulance helicopter nearly hit a radio tower in Florida, that was not lit.

The Commission requires towers above 200 feet to be properly lit, to avoid such incidents.

Information gathered from the FCC Daily Digest, 1/5/99

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://www.qsl.net/w8mmq/. An archive of past newsletters is now available from the web site.

Information from the following sources was used in the production of this newsletter: Amateur Radio Newsline, the ARRL Letter, the FCC Daily Digest,

the RSGB web site, and other published reports.

The Motorola HT-220 Page has been updated.

See http://www.batnet.com/mfwright/HT220.html

This website features the Motorola HT220 handheld with information
including model tables, frequency conversions, parts and accessories,
manual numbers, tech tips and stories.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever
produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that
had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....
From the Editor's Desk:
From all our us here in the State ACS Training Unit, the warmest of wishes for a safe and joyous holiday season. We've had a great year, and have had the privledge of meeting (in person or in cyberspace) dozens of great people who have had an interest in emergency services, and who have been kind enough to share their thoughts with us in this Newsletter. To all of you who are truly first responders...Happy Holidays!
Stay safe, everybody-- see you next week! Dave Larton, Editor

Please Welcome:

.....

>From the Mailbag:

From: Ben_Green/OES@oes.ca.gov
On January 1, 2000 equipment with embedded microprocessor chips that are not Year 2000 Problem compliant may malfunction. To prepare for this and correct the problem the California State Department of Information Technology (DOIT) is coordinating a project to identify all state equipment in every agency that contain embedded chips.

As Program Manger for the Auxiliary Communications Service(ACS), I was tasked to solicit written assurances that all amateur radio equipment in our possession is Y2K compatible. Commercal radio equipment is being addressed by the California Department of General Services, Telecommunications Division. State OES has several models of Amateur Radio product which have embedded components. We also have some software and other accessories which may be affected by this problem. I sent letters to several manufacturers requesting they send me written confirmation either attesting that all models and accessories are, are not, or do not know if they are, Y2K compliant. So far only Kenwood and Yaesu have answered my requests.

The following is from Kenwood Corporation.
"Kenwood Communications Products are Year 2000 Compliant All Kenwood Commications product manufactured by and for Kenwood Communications Corporation are not effected by the advent of the year 2000. The term "product" is herein defined as all individual Kenwood products inclusive of internal microprocessors, operational software (a.k.a; "firmware"), programming software, any of the data files produced, stored or processed by the programming software, and any enhancements, upgrades, customization, modifications, maintenance and the like of the aforementioned. Kenwood products do not process, provide, receive or exchange in any manner 'date data' information*. Therefore by reason of the advent of the calendar year 2000 and beyond, including leap years, Kenwood products will not cause date data information corruption, be corrupted by date data information, whether true or erroneous, or operate adversely in performance or functionally. Kenwood products are hereby certified as 'Year 2000 Compatible, Compliant and Ready'.
*Note: Some Kenwood radio programming software (model numbers: 'KGP-xxD") provide on-screen real time emulation of the personal computers internal calendar date and time claock. This emulation also appears on the software hardcopy printouts at the time of printout. This emulation is entirely a function of the computer used and not that of the Kenwood software or radio products."

>From Yaesu USA I received virtually the same information...."all Yaesu Radio Communications hardware and software meet the criteria for the year 2000." Information from DGS-Telecomm

indicates that all radio manufacturers products are Y2K compatible as we have suspected. Our efforts will continue to maintain the highest levels of support to the Amateur Radio community in areas such as this Y2K Problem.

Ben J. Green
Telecommunications Coordinator
California State Office of Emergency Services
ACS Program

(Regarding last week's EMCOMM Bulletin by Cary Mangum concerning email practices):

From: David Coursey <david@coursey.com>

Hi Dave:
I get 100 or so e-mail messages a day and distribute a newsletter via e-mail to about 2,500 readers, so I know all about e-mail formatting headaches. But the solution isn't just dumbing down the mail you send so that every possible client can read it. That is certainly important for some messages, but recipients should be encouraged to upgrade their mail reading software, too.

It looks like the world is moving toward HTML as a standard way of preparing both word processing documents and mail for electronic distribution. This allows richer communication, and in Microsoft's case makes possible a "round-trip" from Microsoft Word 2000 to HTML and back with no loss in graphic richness.

While encouraging people to make their outgoing mail as palatable to clients as possible, I'd also encourage people who get garbaged e-mail to consider whether their software might be contributing to the problem. You can get new Microsoft and Netscape mail clients for free. .....

Current Events:

From: "Kitchell Brown" <kitbrown@jps.net>

Dave,
We in the San Francisco ACS had been considering staging a surprise drill. Well, careful of what you ask for, you just might get it ! This one came to us courtesy of P G & E. As the ACS Chief for San Francisco, I prepared an "After-Action" report for SF OES. I've extracted a few items from that report that I thought might be of interest. For those not familiar with the event, I start here with a summary prepared by our Liaison to the Neighborhood Emergency Response Team (NERT) group, Bob Jacklevich, KF6PFV.

The electric power failed in San Francisco at approximately 08:17 on December 8, 1998 due to a Pacific Gas and Electric

power grid failure. The source of the failure was determined to be caused by the failure to remove two grounding rods after maintenance had been performed on a transmission unit located in the PG & E facility in San Mateo, California. The over draw on the grid caused the two P G & E power generating facilities located in San Francisco to shut down. Power was lost in many locations on the Peninsula as well as in San Francisco. San Francisco was without power for approximately 6 hours. Portions of the City regained power beginning around 12 noon. The entire traffic light system was out of service, along with Muni and BART. Those city emergency facilities with generators switched over to them.

Summary In response to the official activation of ACS by OES at 10:06, operation of our ECC commenced at 10:33. It was then fully staffed by approximately 11:00. No specific operational directives were received from OES, therefore ACS maintained operational readiness with traffic consisting of taking unsolicited field reports of electrical power status and traffic conditions. At about 13:00 a debriefing session was held. Operation of the ECC was terminated at 13:30.

Operation from the ECC was primarily conducted by way of two Amateur Radio repeater systems: The system put into operation for ACS earlier this year at the City site on Twin Peaks (WA6GG) and the system operated by the Bell Telephone Pioneers that operates from downtown San Francisco (N6TP). Several of the operators at the ECC are also licensed as "REACT" operators and limited operations occurred on this system. Unfortunately, I do not have a record of that operation.

Overall Operation I kept our operation somewhat informal. Most of the early traffic were inquiries from ACS members about where to respond. Since this was an ECC-only activation, they were mostly advised to stand by on the radio. Later on, unsolicited reports of field conditions were reported and, as appropriate, reported to OES. This I felt was in keeping with our perceived level of activation and need. As there was little superfluous traffic on the channels, I did not see the need for a disciplined net control. However, in retrospect, I believe that we missed the opportunity to exercise proper communications protocol. Our Logistics Chief, Bill Cereske, KE6AZK, stated , " As predicted in the past, many emergent volunteers came up on the air. They needed, and will need in the future, leadership from the ACS volunteers. ACS needs to maintain firm control of the nets, and keep traffic focused on the mission."

Who should respond? We recognized that our planning to date has been primarily in response to a significant earthquake. In such an event, our "Mobilization Plan" calls for ACS members to report to their pre-assigned assignments at either the ECC or

their ERD station (Note: Ham, and in some places REACT, equipment is in place at the 10 major Emergency Response District fire stations). We now recognize that we must develop a plan for other types and levels of events. The ACS Chief called for a "volunteers" for this event instead of requesting that people go to their mobilization assignments.

Were the appropriate communications systems external to the ECC facility utilized ? Those channels listed above under "Summary" above were effectively and appropriately utilized. Both systems are known to have reliable emergency power. However only the Twin Peaks repeater is under control of ACS. Current plans call for its use as the City-wide command staff channel or other high priority use. We can not be sure that ACS will have use of any other system during an emergency. Note:The SF ACS communications plan employs the use of simplex channels wherever possible.

Security The following quote from Desmond Crisis, KC6VHG, our Training Chief, who was the first to arrive at the ECC, summarizes the ACS position well: "At the time I arrived on scene, the Sheriff's Security contingent had not yet arrived and I was able to proceed directly to the radio room without encountering security. Not long afterwards deputies arrived and security of the site became very tight. ACS members should be aware that even after they get onto the complex, they must wear their badges or they will be scrutinized. Members should ALWAYS carry their identification with them, even if they do not necessarily carry their vest." I noted that all ACS operators arrived at the ECC with their badges and vests, even though some had come from their work locations. This indicated to me that these people are prepared at all times.

We had previously known that we had some concerns and about activation and mobilization, but kept saying that we would address them. Now, not to expose our "dirty laundry" here, but to alert other groups that may have the same types of problems: In our report to OES I wrote: What mechanism is in place for mobilization notification to all affect personnel ? It is intended that a combination of pagers, telephone tree notification, and radio contact be employed. However our telephone tree is so grossly out of date to be useless and there are up to 4 radio systems that have been employed as contact points. Had this been a more serious and faster evolving emergency, I believe our initial effectiveness could have been significantly impaired. We need to fix our telephone tree and establish a primary radio contact point.

We here in San Francisco enjoy enthusiastic support from City government. At the conclusion of ACS involvement, I spoke personally with our Mayor, Willie Brown. As he had done on

several occasions in the past, he expressed his gratitude for
our participation. He considers ACS to be an essential part of
the City's emergency plan.

Kitchell (Kit) Brown, WB6QVU
Chief, San Francisco ACS

From: "Robert W. Sanford" <rsanford@pipeline.com>

Hey Dave,
The American Red Cross is celebrating the 12 days of giving by
collecting the blood it knows will be needed over the holidays.
A spokeswoman says donations of blood decrease but the need
often increases at the end of the year.

She says 300 units of blood must be collected daily to meet the
needs of the 40 hospital served by the Armerican Red Cross in
the San Francisco Bay area.

Anyone who visits a Red Cross blood center in the region between
now and Jan. 8 will eceive a free T-shirt and their name will be
added to a Tree of Giving.

Donating blood takes just an hour -- and saves lives. Call
1-800 GIVE LIFE to schedule an appointment near you.

>From Microsoft:

Microsoft recently identified several minor Year 2000 issues
with Microsoft Windows 98. While these issues can result in the
incorrect display of Year 2000 dates under certain conditions,
they pose no risk of data loss or other serious loss of
functionality. In fact, most of our customers will never run
into these issues in their normal daily use of their computer.
However, we have addressed these issues with the Microsoft
Windows 98 Year 2000 Update, and we recommend customers obtain
it and install it wh en possible. We apologize for any
inconvenience.

At Microsoft, we are committed to rigorous testing of our
products. As Microsoft Windows continues to evolve and we
develop new updated versions and service packs, we will continue
to test and retest our products to assure quality and Year 2000
functionality. Should we encounter any Year 2000-related
issues as a result of these tests, we will continue to provide
our valued customers with updated information.

To read more about the Year 2000 issues we have identified,
please access our web site at:
http://www.microsoft.com/windows98/highlights/Win98Y2K.asp or
http://www.microsoft.com/year2000

To obtain the free Windows 98 Year 2000 Update, you can do any
of the following:

Download from the Windows Update site on the Internet at
http://windowsupdate.microsoft.com/
Order it on CD by accessing the Windows 98 web site at
http://www.microsoft.com/windows98/highlights/Win98Y2K.asp
Order it on CD by calling 800.363.2896.

Microsoft takes Year 2000 issues seriously, and we know you do
as well. Microsoft is committed to offering customers a rich,
safe computing experience, and developers have been working
around the clock to isolate and address these issues.

The Microsoft Windows 98 Team

This week's EMCOMM Bulletin:

EMC163 Attachment Botches 1/2
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC163 Attachment Botches to Email 1/2 Release 12/21/98

Query: Why do some users get clean attachments to their Email messages while others trash an attachment as unreadable?

Answer: First let's define an attachment. It a file from your computer that is sent separate from, but with, the Email message. That is, it is not within the text of the message, but "attached" for sending purposes. The success of attachment can vary because of several aspects: (1) your understanding of this subject; (2) the ability of your software to handle attachments: (3) the type of attachment; (4) the software the recipient has, since he/she must have software that can 'handle' the attachment you send.

Typically an attachment is a binary file. A binary file is any file that contains non-textual data. Examples of binary files are applications and images. These include: Word processing documents (MS Word, WordPerfect), JPG image files, GIF image files, execution program files (PC), and other "data" type files that are not pure ASCII, such as compressed files. (Refer to bulletin EMC162 for more about ASCII aspects, ASCII being text.)

The problems that are encountered when trying to view attachments are usually created by an incompatibility between Email software and the methods that they use to encode and/or compress files. This is usually the case when different platforms are used since the "default" methods are usually different. As an example, Macs normally use one method of encoding files, while the DOS/Window computers use something else. Since most Email programs will automatically encode attachments, the user needs to understand what that software is capable of doing by the way of encoding. In the newer Email programs there is often a selection for default encoding that allows the user to choose what method they need to use for a particular recipient. Those with this option can learn how to achieve successful transmission of attachments by conducting tests with the intended receiving party to verify that they are able to decode the attachment. Once the computer user grasps the fundamentals of which option achieves which purpose, sending attachments becomes second nature. Fortunately, ever improving software makes this process easier as more of us learn these aspects of intercommunication between people.

(Continues, next bulletin, EMC164.)

To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

I never said otherwise. I said your proposal wreaks.

Not to mention the administrative bureaucracy it would create.

Our cable company has municipal court proceedings televised on local access.
During traffic court one day, a man with his fifth DUI was before the judge.
The judge said that if it were up to him, he'd permanently revoke his
driver's license. However, the judge said that he had an *obligation* to get
him sobered and on the road legally, and suspended his license for two years.

Speak for yourself, Lloyd.

If you REALLY want to know where CBCRYBABY has wandered off to, I suggest you email him a copy of your post.

On second thought, you'd better not send CBCRYBABY email; ol' Drewsy might accuse you of harassment or something like that, which of course could result in his usual lawsuit threats.

"Where's all the RADIO CRYBABIES?"
"I wanna hear 'em TALK TOUGH!"

Drew will be back as soon as he gets
bored . . . but under a different screen name, of course. CBCRYBABY pulled the
same stunt about two years ago when he was posting his useless crap in
rec.radio.scanner and rec.radio.cb as "MNMANIAC." Now that "CBRAMBO's" cover
has been blown and nearly everyone in this NG has discovered his identity,
it's time for DJ Drew to go on hiatus for awhile. Drew's posts under his new
screen name won't be hard to spot; just look for Eric Oyen's name in the
subject line and his usual bogus lawsuit threats.
An AOL member cannot change his or her spots, just their screen name.

This being my 3rd cycle, I have noticed many more CB'ers on 10 meters
than on the previous ones. Personally, I believe it is due to the new
breed of "export" radios that are readily available.

I have actually had to politely ask them to bug off. Some do, some
don't. It would sure be nice if these companies were made to comply
with the law.

The ones I have heard have exhibited little if any technical
knowledge. In fact, based on the way they behave on the radio, IQ's
are somewhere between their shoe size and their age.

Just my observation.

>Transmitting, just like driving a vehicle, is a privilege, not a right.

Possibly ture depending of course an one personal feeling
about govenment and human rights, however wether or not one agrees
that tranmiting in some from or fashion is a right or previlege, you
do not address the point. It would be a new and serious addition to
goverment police powers. One I might add that I see NO grounds to
support as legal in Constitution of the US.

In addition it is samll from registing tranmitters to
receiviers as well. I certainly don't the Government to gain that
power.

PSK31 should put it to rest for good. 50wpm in a bandwidth of 32Hz
with a 6dB advantage over CW at the same maximum power level. Only
a PC/SB required in addition to the transceiver - no external TNC
box required.

What a stupid analogy. What does driving an auto have to do with operating a radio. Are you sober now to understand that when you know someone is operating a vehicle without a license that you report it to the Police and they take action unlike the FCC which takes no action. Also by running someone off the road you can cause injury and possible death where calling CQ on a station that doesn't belong there will not cause death or injury.
TRY AGAIN>>>>>and sober up first....

Hi Cecil,
Just a little different analogy don't you think? So in other words we're
supposed to let the freebanders use 10m? The freebander is using frequencies
allocated to licensed amateurs, he does NOT belong there. Amateurs do.
Since freebanders aren't licensed to use 10m I see no problem with chaseing
them off. They are breaking the rules.

73,
Tom

I don't know anyone who works CW because it's efficient. I work it because it's fun. This is a hobby, not a business. Why are we so worried about efficiency?

BTW I probably won't be using PSK31 since my typing ability is very poor. So CW would be faster for me. See the human still limits the machines efficiency. Boy I'm sure glad the ham test doesn't include typing.....there's your cue Cecil, go for it!!

I am not sure how many geese read this newsgroup. Maybe you should've posted in rec.birds ? :-)

In any event, what is wrong with Burt's observation ? It seems to be on-topic to the ne.weather newsgroup. It questions the
status quo, and provokes thought and discussion. (That may be what bothers a ham, now that I think about it for a bit).

If you are looking for actions which are improper or out-of-place in a newsgroup, I might suggest that
reposting a commercial advertisemment for Audio BookClub off of DejaNews (as you did in your original post) could be construed as
demonstrating little interest in your own netiquette. However, since your main intent seemed to be denigrating Burt Fisher, I
guess I can understand how you may have overlooked it in your haste.

One obvious one is that efficient modes allow more people to communicate in
the same bandwidth. To me it is a highly curious attitude which would seem
to limit hams to modes that basically don't work very well...

> BTW I probably won't be using PSK31 since my typing ability is very poor. So

Could it be that you are just too lazy to learn to type? :)

One good thing about having computers around is the concept of "buffering".
You don't need to type at 40wpm. The computer buffers your typing up, and
then sends them in a burst. Great idea that.

Mark

But what exactly is this? The "SSB Compandored" part makes me think
you are talking about NBVM (narrow band voice modulation) that got a lot
of hype one year and then faded into oblivion. It compressed both
amplitude and frequency, before going into the audio input of your
transmitter, and at the other end it expanded them again by taking audio
out of the receiver. It was not a traditionaly amateur experiment, since a
couple of people "invented" it, and worked up all the details, and then
released it to the public as a finished product. It must have been i[n
QST in 78/79. It was on the cover, and the article was a "gosh aren't
these great inventors" piece, with a technical article to follow. I don't
think I saw the technical article. The details were in the 1979 ARRL
Handbook, I think the only time it was there and one of the few places to
look for information about it since the whole idea sank pretty much into
oblivion shortly afterwards.

But I'm not sure what you'd be looking for a CQ article for when it's an
"ARRL project".

The only other thing I can think of is ACSSB (Audio Compandored
Single Sideband) that compressed the audio signal on transmit and expanded
it on receive. Basically the amplitude compandoring used in NBVM, and a
concept that had really been around before that. But ACSSB added a pilot
carrier for technical reasons. There's a small bit in the 1986 ARRL
Handbook, and the same bit is also in the 1993 Handbook (the two most
recent Handbooks I have).

It does mention a QST article in QEX for July 1982, "On SSB Radio
Communications" by J.S. Belrose.

I didn't know there was an "ARRL Project" for this, and again, even if
there was why would it be described in CQ?

`Did you only get a blank board? Does it have anything written on it?
Any date at least? If the board is populated, what are the IC's? What
about their date codes?

What exactly did the seller tell you about this board?

Daniel Hicks, Jr. wrote

:HAM RADIO NUMBERS DECLINING
:The numbers for 1998 are in, the trend is downward and the outlook is not
:very good for the future of Amateur Radio. This is the gist of recently
:released FCC figures on the number of Amateur Radio operators licensed by
:the agency. And if the figures hold, 1998 will have been the first year of
:actual decline of the total number of United States radio amateurs in the
:past two decades.
:
:A year ago there was a total of 719,331 licensed radio amateurs listed in
:the FCC's database. Twelve months later that figure has dropped to 718,241.
:That's a drop of 1090 hams or a .2% annual rate of attrition. And while it
:might not seem very significant, 1090 is more hams lost in the United
states
:than are licensed in some other nations.

This is bogus! Since, we have a 10 year license the FCC is carrying approximately 200,000 hams on the books that are either inactive or silent key and wont renew. Ten years before there was an increase of 3.2% (double the average increase) so the number of expirations is now coming due (considering grace period) was double.

:Looking at the percentage rates gives even more reason for alarm. Since
1992
:when the annual growth rate was a healthy 8.4% a year the trend has been
:steadily downward. In 1993 it had dropped to 7.3%. By 1994 to 6.7%. 1996
had
:the most dramatic drop to a minuscule .8% growth and now as we begin 1999
we
:are into negative numbers.

It alarms me that the annual growth rate for those years are even being considered in this 'analysis'. The years with those inflated increases 1989-1994 had NO as in ZERO expirations so comparing to those years to now is 'apples to oranges'.

:And negative numbers means that the ham radio bands are more vulnerable to
:attack from the corporate raiders in the telecommunications industry. These
:are people who envision millions of dollars of profit by evicting hams from
:the bands above 50 MHZ and having that valuable spectrum reallocated to
:their use.
:
:It also means that the government itself might begin to think in terms of
:the millions or billions of dollars that it might garner by auctioning off

:some of our bands.
:
:Finally, on another level it means that there will be less interest by
:companies in introducing new equipment. As any manufacturer will tell you,
:it makes no sense to put money into research for new products for a market
:that may soon die away.

They would not say that, they would not leave until there is no market. They would work harder to capture market share in a 'shrinking market' but it seems to me they are concerned with an international market which is not shrinking nor is ours. The 1090 'fictitious' hams that the FCC doesn't have on their 'new' set of books are of *NO* consequence to the manufacturers.

The GE works fine but you might need a preamp to equal the sensitivity of the Hamtronics. The GE stuff can be found for lots less than the Hamtronics. I have been using GE Mastr II for a number of years on 2 meters and it works fine. Have set one of the 120 watt mobiles at about 90 to 100 watts and put a fan on the PA. One net ran about 3 hours without a letup and no problems at all.

Have not tried the Motorola stuff, but bet the price would be cheeper than the Hamtronics for the smae power level jsut as the GE.

Look on the internet for some sites on the conversion of the comercial stuff. There is a recommendation of a certain type of GE for the 440 band.

I remember a little about this board. I attended a seminar at the ARRL Midwest Convention back about 1986. I remember them saying that a number of project "kits" had been given to a number of people for experimentation and testing. Sounds like this guy got ahold of one of the blank boards without the rest of the parts or documentation. Since ARRL was the source for these kits, I would suggest getting ahold of someone there connected with QEX. They will have the back articles on Amplitude Compandored Single Side Band (ASCSSB). You are right about the pilot carrier. The whole thing flopped because without the pilot carrier, there was no reference point from which the receiver could reconstruct the signal. I you are going to transmit a reference (pilot) carrier, you defeat the whole purpose of ASCSSB (saving bandwidth). The only way they could get it to work without the carrier was to work only on precise preset "channels" with little or no tolorance for deviation in frequency.

Hope this helps whomever. Please don't flame me if I got some parts of this wrong, it's been 10 - 12 years since I dealt with this one.

Wayne , KEï¿½BZ

Well you can put 4 CW QSO's (or more if you push it) in the space of one SSB QSO so it is efficient. But again that's not the reason most use CW. In fact I would go so far to say bandwidth efficiency is the last thing most hams worry about. They work their various modes because they like to. They enjoy what that mode has to offer for them. In short it's fun.

>Mark:
>One good thing about having computers around is the concept of "buffering".

In real time communications, a buffer wouldn't help slow typing, unless the other guy doesn't mind reading a magazine between transmissions. SISO (slow in, slow out) applies to any size buffer...

> crazy as Wayne Green.)

(At this point, I'm not sure who I'm addressing, so I'll just address the
comments, not the commentor).

The ARRL BOD has only one thing on it's collective mind when it
comes to the restructuring of the Amateur Licensing system: The
bottom line. Keeping the ARRL financially flush is their first and only
concern. Sure, they wish no harm to the ARS, but if the ARRL goes
down the crapper financially, they lose their allegedly volunteer
"jobs," the travel, the perks, the status, prestige, etc. etc., not to
mention the paid personnel at League HQ. I'm sure there's plenty
about the financial organization of the ARRL that we don't know
about, or even suspect.

Obviously, the only way to achieve their goal is to ensure that the
ARS keeps growing, or at least doesn't suffer severe losses. They
figure a significant percentage of licensed hams will always be
ARRL members. If they could suddenly double the number of
licensed hams, through give-away licensing, they should see a
significant increase in League membership, and they're probably
right.

>
>>I don't think there is anyone on the Board who cares how many radios
>>Yaesu, Icom or Kenwood sell.

They damn well do care! Advertising revenue from the big equipment
manufacturers is what's keeping QST, and the League itself, afloat.
Give-away licensing, the kind the League is hoping the FCC gives them,

will go a long way toward helping meet that objective.

>Those companies are involved in other
>>commercial activities and the amateur radio segment of their business

>>the organization. It actually means the League can provide more in
>>the way of services to the members more than anything else.
>
>(Translation: Our easy license proposal will make thousands of CBer's
> feel welcome.

I suspect that there are some financial considerations being given to
ARRL Board members which, when added up, equals being "paid" to
perform their services. I, for one, couldn't afford to serve on the ARRL
BOD without being adequately compensated. I'm sure every ARRL
official above Section Manager is getting their palm greased, somehow.
Generous travel/expense accounts, at the very least.

>>The changes proposed by the Board are needed. Other changes along
>>the lines that I mentioned are also needed for the amateur service
>>to continue to be a growing, valuable service.

The only "changes" we need are to get rid of the Novice and Tech Plus,
make a few refinements to the procedure for written testing, and go with
5 WPM General, 12/13 WPM Advanced, and 20 WPM Extra -- with
the Extra "phone" segments given away to the Advanced class so the
20 WPM code test has no phone privileges at stake. This is a fair,
generous, and adequate change. Going beyond this would do the
kind of "harm" to the ARS that us "PCA's" seek to avoid.

There has been a precedence set that says that federal permission to have a tower structure, as per part 97 defining antennas, supercedes local zoning codes. If anyone needs help with this, the ARRL has some good legal guys for members. Although I don't recommend joining ARRL for any other reason.

531. FS: Alinco DR-M06 6-meter FM transceiver

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-10 00:00:00 UTC
From: Bill Dorsey <xyz123@lila.com>
Message-ID: <369940D2.FD92C5A0@lila.com>
Source record: 153666
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have an Alinco DR-M06 6-meter FM transceiver for sale. It receives 40-60MHz, and puts 10 watts out from 50-54MHz (it can also transmit out of band, but the specs are only guaranteed in the ham band). I have the original box and documentation. The radio is in excellent condition -- I have barely used it. I'm selling it because I bought an Icom 706 which makes it redundant. I bought the radio new around a year ago for $300 and I'm asking $200 (plus shipping) for it.

>
> sda
The last I heard, the 5 WPM test is also sent at 18 WPM character
speed. Why? As an operator gains speed and proficiency, he just
shortens the dead space between characters to obtain overall speeds
higher than 5 WPM. This way, the characters sound the same, from 5 to
18 WPM.

It works! - Tom K4AKC

Actually I have the equipment now to operate AM, FM, SSB, RTTY, Packet, and Pactor. But it's a personal choice not to use them and use CW exclusively. When all the OF CW op's are dead in 20 to 30 years, and I have no one else to talk to, then maybe I'll think of changing...

It will work better horizontal and high.

> Does the ribbon (ladder / open) line radiate? should it be vertical?
> horizontal? or it doesn't matter (should I bury it?)

The ladder-line doesn't radiate if your dipole currents are
balanced. Dipoles tend to have balanced currents. However, to
avoid feedline radiation, one needs a 1:1 choke/balun at the
coax/ladder-line junction.

> Or any info about the G5RV would be nice

Follow the G5RV link on my web page.

I used to work for a company that had the Motorola programmable VHF radios. I think they were 16 channel 5 watt, but any of the programmable ones will do. I was able to take it to the shop were it was purchased and have it set up on the local 34/94 repeater and 146.520. It worked very well. The only consideration is the antenna. Motorola's antennas only have a certain band width, so it would be better for the radio if your business freq. fell within the same bandwidth as the amateur freq. you want to use.

> I have no URL but somebody will
> 73 KO6JQ

Why does any one have to INCREASE his speed???
Start learning it in high speed, like : say 30 WPM
in that speed you get a sound a tune a medoly a
whatever you want to call it and you learn CW as a language
not as math 3X- =O.
How do you increase from 5WPM to 8WPM? are you learning it twice?
My nephew strted learning CW at 30 WPM and in a couple weeks
he could recognize a dossen caracters AT ANY SPEED.
Later he developed an interest in coin collection and i suggested
he become a millioner instead of a ham.

On Fri, 8 Jan 1999 00:06:58 +0100 , fox/mulder@usa.net (Fox Mulder/X-Files) wrotf:

>PLEASE IF ANYONE GOT SERVICE MANUAL FOR ICOM IC-211 RADIO CONTACT ME
>AT
>
>fox/mulder@usa.net
>
>
>
>URGENTLY NEEDED .!!!
Icom NEVER published a IC-211 service manual so you will not find one anywhere. You will need to use the owners manual and schematic for service along with a knowledge of electronics and how circuits operate.

Gary

You guys just can't get past the "efficiency" myth. That
is, you assume that the average ham will adopt it just
because it is spectrally efficient.

Only after conditions on HF get so bad that operation is
like it was in the 50's on HF AM will hams embrace the
"Spectrally efficient" modes en masse. Only those who
experienced it can appreciate the mass of hetrodynes on a
busy 75 meter AM phone band. Until then, few will be
interested beyond those who become interested in ANY new
technology.

Sorry, Pal that's just the way it is, has been and will be.
RTTY was available long ago, and certainly is "spectrally
efficient". But you know how widespread it has <not> been
all along.

SB DX @ WW $OPDX.391
Ohio/Penn DX Bulletin No. 391

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 391
BID: $OPDX.391
January 11, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & Golist, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K3TEJ, KN4UG, W4DC, NC6J, N6HR, N7YA, K8EP, K8YSE, KU9C, C6AFV, CT1EEN, F5NOD, F6AJA & Les Nouvelles DX, G4BUE & DX News Sheet, HK8RPV, IV3NVN, JI3DST, ON6KZ, PS7KM, SV7DMU, VE6TP, VE7ARS and VK4AAR for the following DX information.

2U0, GUERNSEY. The "DX News Sheet" reports that Colin, 2U0ARE, (a novice operator) is often active between 1430-1600z on 10130-10135 kHz.

9M6, EAST MALAYSIA. Ed, K8EP, informs OPDX that he will be active from 9M6AAC station at the Hillview Gardens Resort from January 29th through February 1st. Operations will be on CW and SSB, with some activity in the 160M CQ Contest. QSL via N2OO.

ATTENTION PREFIX HUNTERS. Look for the station OA464QV to be active to commemorate the 464th anniversary of Lima, Peru. Operator Cesar, OA4QV, will be active until January 31st. QSL via OA3QV.

C6, BAHAMAS. Don, KN4UG, will operate from Great Abaco Island (IOTA NA-080) as KN4UG/C6A now until January 19th. He will also be active in the SSB portion of the NA QSO Party January 17-18th. QSL via the Bureau or direct to: Don Namm, 103 Birkhaven Drive, Cary, North Carolina 27511. Check out Don's Web site at: http://www.qsl.net/kn4ug

C6, BAHAMAS. John/K3TEJ and Edward/WA3WSJ will be here from February 16-23rd. Their activity will be on 160-10 meters, including the WARC bands. They will also be in the ARRL CW DX Contest using the callsign C6AKW. QSL via K3TEJ.

FT5W, CROZET ISLAND. Gilles/F5AGL is now signing FT5WH and has been reported active mainly on 20 meters (14180 kHz) around 1915z. Reports indicate that he can be active on 40/20/15/10 meters for the moment, but he doesn't have an amplifier at the present. QSL via F6KDF: Radio Club de la Gendarmerie, 292 route de Genas, 69677 Bron Cedex, France. SPECIAL

NOTE: Please don't send QSLs for FT5ZH and FT5WH in the same envelope. You must send 2 different mailings (one for each station).

FK8, NEW CALEDONIA. The "LNDX" reports that Philippe, ex-TU2FH, has received the callsign FK8VHU. He will stay there until August, 1999. He was heard this past week around 0000z on 10 meters (around 28500 kHz).

FT5Z, AMSTERDAM. The "DX News Sheet" reports that Michael, FT5ZJ, is now active and was heard on 14122 kHz between 1700-1800z. Hopefully someone can ask him to move up the band. He will be stationed on the island for a year with the army. QSL via F2YT.

FY, FRENCH GUYANA. The French DX bulletin "Les Nouvelles DX" (LNDX) reports that Christian, F6BEN, has received the callsign FY5DG and is active on 20 and 40 meters. The length of his stay is unknown.

HD1DX MOJANDA DXPEDITION. Look for several Ecuadorians to operate from Laguna Mojanda Grande beginning on Saturday, January 30th at 1500z. This operation will last until 1500z, Sunday, January 31st. Activity is expected to be on 40/20/17/15/10 meters. The following information received was a little confusing: "Laguna Mojanda Grande is located within the crater of Mojanda Volcano, located in spurs of Volcano Fuya-Fuya to 3,800 meters on the level of the sea." QSL via HC6DC, Rodrigo Camacho.

IOTA NEWS.......
The "LNDX" reports that Jean Marc, F5SGI, will be F5SGI/P from Noirmoutier Island (IOTA EU-064) from February 20-26th. He will be active mostly on CW.

RARE IOTA. Hillar, N6HR, reports that the Western Washington DX Club and the Island County ARC (WA) will be operating from the rare Tatoosh Island (NA-169) in the July, 1999 IOTA Contest. Tatoosh Island belongs to the Makah Indian Nation and is located off Cape Flaherty at the western tip of Olympic Peninsula (WA). For more info, contact N6HR at: hraamat@whidbey.net

NEW IOTA. Sam, CT1EEN, informs OPDX that he will be in Australia September/October 1999, using the special callsign VK6EEN. During his stay, he states that he will be one of a TEAM (consisting of 12 to 16 operators) for a DXpedition to Rowley Shoals (VK9-99, IOTA OC-New). There may be another possible island in VK6-Land activated.

AS-041. Look for Oki Island (Shimane-Ken) to be activate by Yuji/ JA3CMY, Fumio/JE4CIL and Takeshi/JI3DST between March 20th (0700z) through December 21st (2200z). Activity will be on 80/75/40/20/17/ 15/12/10 meters with operation on CW/SSB/SSTV. QSL via the following"
JA3CMY - Yuki Iwata, 3-13-3 Kaneda-Cho Moriguchi-City,
Osaka 570-0011 Japan
JE4CIL - Fumio Suzuki, P.O.Box 3 Hamamura Ketaka-Cho,
Ketaka-Gun Tottori 689-0331 Japan
JI3DST - Takeshi Funaki, 2-18-26 Hannan-Cho Abeno-Ku,
Osaka-City Osaka 545-0021 Japan

E-Mail - MXK00027@nifty.ne.jp

J47, GREECE (Special Event). George, SV7DMU, informs OPDX that the "Radio DX Group of Thrace" (in SV7-land) will activate the special event station J47XCF from the February 8-21th. The station is active to commemorate the "Carnival Festival of City Xanthi" in North East Greece. For more details, check the home page of "Radio DX Group of Thrace" at: http://members.xoom.com/georgexanthi/dxgroup.htm

J7, DOMINICA. Members of the "Foundation for Amateur International Radio Services" (FAIRS) will be active again from here on February 12-22nd. Look for operartors Gay/KD4GMV (YL op) and her husband David/KK4WW; Kay/KF4EKH (YL op) and her husband Don/KE4UGF; Bill/W4WX and Larry/N4VA to sign as J79GMV, J79WW, J79EKH and J79UGF. Operations will be on CW/SSB and RTTY. Suggested frequencies are: 7180, 7240, 14190, 14240, 18130, 21350, 28380 and 50125 kHz. QSL via operator's instructions.

KG4, GUANTANAMAO BAY. Don, W4ZYT, will once again be active from here, February 16-23rd, as KG4ZK. Also, look for him to be active as KG4DZ in the upcoming ARRL CW Contest. QSL KG4ZK via home call and KG4DZ via W4SD.

PACIFIC TRIP. Simon, IV3NVN, reports to OPDX that from February 16-20th, he will be in Honolulu and probably active as KH6/IV3NVN. From February 21st to March 3rd, Simon will be active as KH4/IV3NVN from Midway Island. His activity will be on SSB and CW. His equipment includes the following: Yaesu FT-890, maybe a linear from Sommerkamp FL-2277B, a 5 element Log-periodic by TITANEX (for 10/12/15/17/20 meters), a home made vertical for 30/40/80 meters and maybe an inverted L for 160 meters. If Simon can find a 6 meters rig, he will also be active on this band. His QSL Manager will be Flavio IV3TMV, direct or via Bureau.

PY0S, ST.PETER & ST. PAUL ROCKS DXPEDITION CANCELLED. Karl, PS7KM (NDXG Coordinator), informed OPDX that the DXpedition to St Peter & St Paul Rocks (PY0S) scheduled for the first week of March was cancelled due to low budget. All donations received to cover expenses for the trip will be returned to sponsors as soon as possible. Karl and the "NATAL DX Group" would like to thank all, directly or indirectly, for their valuable help one more time.

QSL INFO AND NEWS....
QSL Manager Fritz, DL7VROI, who has just returned from his EA8 operation, reports that the QSL cards for the 8Q7IO and 8Q7IQ operation (October 19th-November 5th) should be received within the next week from the printers'. He does mention to us that he is the QSL Manager for the EA8 activity by him (DL7VRO) and only the following DL stations: DL1YFF, DL7AU, DL7IO, DL7UBA and DL7VRO.

It has been reported to OPDX that QSLs for Gyuri, HA5JI, no longer go to Bob, W9XY. Bob used to be the QSL Manager because Gyuri was strapped for time, but Gyuri is home more now so he asks that all QSLs be sent direct to HA5JI.

Bernie, W3UR (editor of "THE DAILY DX") reports that the A61AJ logs are now available on the InterNet at:
http://www.dailydx.com/a61aj_search.html
Bernie has printed the labels for all QSL card requests received before December 29th. He is in the process of attaching labels to the color photo QSL cards and will have all U.S. cards in the mail before the January 10th postal increase. Most of the U.S. cards will go in the mail Monday morning. He adds that the foreign mail will follow very quickly afterwards and Bureau cards are OK (However, he will only answer them in bulk once a year and that will be sometime in the summer). Also, A61AJ does have a Web page, which has some older pictures at: http://www.a61aj.com
For those who may be interested, Boris, T93Y, has posted pictures of the recent A61AJ CQWW CW DX Contest on his home page at:
http://www.qsl.net/t93y/a61aj/

The "Checkered Turtle" QSL cards for the October, 1998 J3A CQWW SSB Contest are now being sent out. The QSL Manager for that international team effort led by Harry/J37K and Gill/J39AL is Ron Hasselbrock, WA8LOW.

Alan, VK4AAR, reports to OPDX that he has been asked by Sara, VU3RSB, to take on his QSL management. AIan mentions that he guesses he will be able to handle earlier QSOs also. Please, QSL to VK4AAR DIRECT.

NEED A QSL MANAGER? Alan, VK4AAR, states he will be happy to take on the job. If you have an E-mail address, Alan can turn cards around very fast but the old fashioned method of mailing the log is OK too. If interested, contact Alan by E-mail or postal as per the following addresses:
VK4AAR's E-mail - almee@halenet.com.au
New Postal Address - Alan Roocroft, PO Box 421, Gatton 4343, Australia

Scott, VE7ARS, QSL Manager for the XM7P (RCMP 125 Ann Station) that was on Trutch Island (IOTA NA-181), states all the QSLs for this event have been sent out. Some cards went out blank to stations which was an error. Some operators were wondering what to do. Scot states that they have fixed the problem, and that they will re-issue all those blank cards. THERE is NO NEED FOR STATIONS TO SEND ANOTHER QSL OR MORE POSTAGE. Any station that QSLed direct will receive a card direct with the QSL info on it. Scot regrets the mix-up, but this stuff happens from time to time. Any station wishing to confirm QSL status for XM7P can send an E-mail messsage to: ve7ars@sfu.ve7cc.ampr.org

Bob Chambers, NC6J, reports that after ten years of handling the QSL Manager job for KC4AAA, he has decided to turn the job over to Larry, K1IED. Bob states Larry is more than capable and is in touch with the people at the South Pole on a daily basis. He will handle all prior and future QSL cards.

Jacky, F5OIU, has been informed that he is no longer the QSL Manager for MU0ASP or MJ0ASP. At this date Jacky has received only a few pages of the logs and no QSLs. Effective as of the 1st of January, please

QSL via the operator F5SHQ.

NEW BELGIUM BUREAU ADDRESS. Peter, ON6KZ, reports that QSL cards for ON stations should now be sent via the new address: Federation Radio Amateurs - Belgium, P.O.Box 1630, B-1000 Brussels 1, Belgium.

JUST ANOTHER REMINDER. Coly, 3W5FM (aka UA0FM), has a new address for direct QSLs: P.O. Box 37, Vladimir, 600000, Russia.

SAN ANDRES 1999 DXPEDITION. The Woodbridge Wireless (WWI) from Woodbridge, Virginia is pleased to announce its 4th DXpedition. This DXpedition will be to San Andres Island (HK0, NA 033) and will coincide with the 1999 ARRL DX Phone Contest. Their callsign is yet to be assigned (it may turn out to be HK0/W4DC). They plan to operate from March 2-9th, including the contest, when two transmitters will be on the air. Operations before and after the contest will emphasize RTTY, CW, and WARC bands. All contest QSOs will be confirmed automatically with a photo QSL via the bureau. You can send an SASE to W4DC if you need one quicker, or for QSOs outside the contest. The TEAM SAN ANDRES members are W4DC, K5OF, AA3KX, WB4ZNH, WN4FVU (if you need a YL contact), N2PP, and WZ8P. Check out their Home Page for the latest news and log checking at:
http://www.pwcweb.com/wwi/DXpedition
Questions and comments before and after the Dxpedition should be directed to Denis, W4DC (catalanode@navsea.navy.mil). During the operation, please contact Mike, KA4RRU (ka4rru@erols.com).

SILENT KEY. OPDX was informed that Philip Dawkins became a Silent Key on December 30th. His callsign was C6ACN. OPDX sends our deepest sympathy to the family.

T2, TUVALU. Mar/DL3DXX, Falk/DK7YY, Manfred/DK1BT, Tom/DL2OAP and Uli/DL8OBQ are now active as T20FW until January 14th. Please refer to OPDX.388 for more details. QSL via DK7YY.

V3, BELIZE. Art/NN7A and Mike/NG7S will be active January 31st through February 6th as V31JZ and V31RL. They will operate from Turneffe Island. Their activity will be mainly CW, but there will be some SSB. QSL via their home callsigns.

XJ1, CANADA. Look for Nova Scotia amateur radio stations to use the XJ1 prefix now until November 27th. This is to commemorate the 150th Anniversary of the Pony Express between Halifax and Victoria Beach.

ZD8, ASCENSION ISLAND. "The 59(9) DXReport" states that Jim/N6TJ and Glenn/K6NA will be active as ZD8Z and ZD8A, February 2-10th. QSL ZD8Z via VE3HO and ZD8A via K6NA.

ZL9, CAMPBELL ISLANDS. The ZL9CI team with ten operators and six stations is very active on the bands now. Just a little reminder that the operators have permit restrictions. They are limited to the hours of daylight only on the island, and the operators have to leave the island between 1030 and 1600z (weather permitting). QSL via ZL2HU. Operation should last until January 25th. On-line logs are available with updated information on this

operation at the Web site: http://www.qsl.net/zl9ci
OPDX InterNet Subscribers will receive all the latest press releases by

There's actually a good reason for requesting people keep conversations in appropriate groups. It helps those who want to find a conversation actually be able to find it. That's why the heirarchy of newsgroups exists.

In article <7783akot1@news.inficad.com>, user@default.com says...

Icom did not have a service manual for the IC211. What is the problem
that you are running into on the unit. The last one that I picked up and
I have 2 was purchased for $25. The biggest problem that I have run into
is poor solder joints and feed throughs, in the most miserable of places
to get to. Let me know if I can help.
Thanks Paul.

552. Re: Dagwood & Blondie Bootleg Radio Movie Title?

no, but if you search for Penny Singleton (she was a doll when she was young
!) as I once did you'll find the filmography - a complete listing of their
movies. I remember the one you're talking about.

I've got a tech ticket, and would like to upgrade, but ....

First, I just don't have the desire to learn the code; second after SWL'ing for 30 years I've heard the content and participants of conversations I monitor degrade to all new lows so there's not much of anyone I would care to talk to; third - the rampant unlicensed low brows who seem to be dominating all bands but especially 2 meter (thanks Radio Shack).

As I Private Pilot I certainly have the drive and intelligence to complete the study needed to upgrade, but so far it's just not worth the time, considering the jammers and such who are on the air in total violation. Otherwise, I would relish the challenge.

What is with you losers who jam, obstruct, or otherwise disrupt the liberty net and similar nets ?

What are you a bunch of Bill Clintons and James Carvilles ? No one has a right to an opinion but yours ?

I listen to both sides but I'm sicked and tired of the Clinton communists tring to censor opposing views.

It's gotten so bad I'm considering gettin on the band and jamming EVERYTHING else and see how you like it. Since the FCC's not enforcing maybe we all should jam the rednecks and hillbillies, who don't have licenses anyway.

You 3950 jammers are pathetic losers supporting a coward, liar, perjuror and adulterer and god knows what else. You've put yourself in the same group as Carville, Larry Flynt, Maxine Waters and Barney Fag. What a crew !

557. Re: NO CODE = NO HAM.

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-10 00:00:00 UTC
From: PR <progers@pivot.net>
Message-ID: <3698e893.0@newsfeed1.cybertours.com>
Source record: 153730

In theory I agree with the idea that the code filters out the "undesirables" assuring that hams have a certain level of ability.

However, I will gladly trade the code for more technical and relevant questions in the exam which would achieve the same goal and more, and would eliminate the need to waste hours learning something I do not need and will never use.

They don't require you take your drivers test in a manual transmission car anymore, and they should drop the code requirements immediately. It's obsolete.

All the code does is restrain people like me from upgrading, while the ones you're so concerned about go on the air without a license anyway.

If I had my way, you'd be required to present your license to buy ANY ham radio transmitter / transcievers. This would fix the problem in a big way.

The way I look at it is if a person is looking in the amateur news groups they will ask about the stuff they think they may be interested in purchasing.. If I were shopping for something I know nothing about I ask questions most hams will. Feel free to ask the poster will be happy to answer I am sure. In my case I have a lot of stuff I want don't want to move and it is easier to post to the list then get an query than to write an oration for each item. they are only good for a day at a time so why post a long post each time..

I plan a long distance move very soon
thanks for reading

wrote in rec.radio.amateur.misc:

: I have the HTX-202 and the radio shack speaker mike for it. The mike
: can't drive the HT at the proper level. Any ideas? Oh, I know, the HT
: only cost me $100, I had a discount coupon.

The modulation level is adjusted by RV1, which is near the bottom of
the r.f. board.

There is no separate adjustment for an external microphone, so you
will want to adjust for a reasonable compromise between the internal
and the external mic if you use both.

FWIW, I have a RS speaker mic myself and have not had reports that its
level is low compared to the internal mic. If it is new you might try
to get an exchange at your RS store.

I found a new in the box Cushcraft R3 vertical antenna. However, the box had been opened and the instructions are missing. Would appreciate any leads on where to get the assembly instructions or at least a picture of the R3 antenna. Already looked on the Cushcraft web-site. Thanks for reading this post. Rick

CW as conventionally practiced is by no means "efficient". I presume that the reason that you say 4 CW QSOs can fit in the same bandwidth as 1 SSB signal because typically 500hz wide filters are used for CW, and often a sloppy 500hz wide filter at that. That's probably true, but it is also meaningless, because any talk about efficiency has to include a discussion of rate. If we take a 20wpm rate as "typical", we find the total information transferred by your four CW QSOs is around 80wpm. A person speaking generally does quite a bit better than that.

CW isn't as bandwidth efficient as it could be either. The recommended pulse shaping that humans seem to like for easy decoding are actually a bit too square, and present rather high odd harmonics. I noticed this quite clearly while working on my Morse code machine decoder. Signals which were judged "pretty difficult" by a couple of Morse experts I know have third and even fifth order harmonics which show up pretty clearly in an FFT. If CW signals where shaped for minimum spectral width (say by a cosine) they sound very "soft" and are hard to find the start and stops to elements.

Somewhere back in the archives this was all hashed out quantitatively.

> >Mark:
> >One good thing about having computers around is the concept of "buffering".

> other guy doesn't mind reading a magazine between transmissions. SISO (slow
> in, slow out) applies to any size buffer...

Again, you miss the point: while you are typing, you aren't tying up the frequency with your 2wpm typing. That gives the opportunity to allow others to use the frequency. Frequency re-use is the key to actually making better use of the frequencies we have.

Mark

Hi Dave,
You do not quote your Bus Freq but from what I remember it is
normally way outside the nominal 2m band so there is no way that you can
use your 2m rig unless you significantly modify it. I suspect that the
cost would not be worthwhile.

All the best

The ladderline is a part of the antenna system and will, to some degree, radiate. Depending on the frequency involved. The G5RV is basically a 3/4 wave 20 meter antenna. And works BEST on 20 meters. No, you can not bury your ladderline as it will detune the entire system. You should keep the ladderline as vertical as possible and away from any sort of metal.

Here in the colonies we're allowed to anonymously act like jerks. ISP's will not release the perps info unless they have a court order so that won't help you much if you were thinking of direct mail or in person retaliation, which is the only reason you probably would want it. Otherwise you should just lower yourself like the rest of us and attack back. ISP's may cancel your account if they get enough complaints, but "poison pen remarks" don't usually get it. In fact they are a Usenet trademark...

>Mark:
>CW as conventionally practiced is by no means "efficient".

Who cares? CW is fun. That's its only modern day purpose. BUT...

CW is more *bandwidth* (number of hams per amount of bandspace) efficient than the predominate modes SSB or FM. But so what? Nobodys going to switch modes because of that. People use modes because they *like* them.

>any talk about efficiency has to include a discussion of
>rate.

Why? Who cares? This is not a for profit business, this is a hobby. Humans conversing for fun. No timeclock. You think I should send faster than normal on CW to make my throughput greater for better efficiency? I should go on SSB for even more even more throughput? What a joke. How about speed speaking classes for hams?

>CW isn't as bandwidth efficient as it could be either. The recommended
pulse
>shaping that humans seem to like for easy decoding are actually a bit too
>square, and present rather high odd harmonics. I noticed this quite clearly
>while working on my Morse code machine decoder.

I know, your not Mark. Your Mark's computer trying to dehumanize ham radio so that the machines can take over. Well you won't win. CW will save the day, right Dick?

I repeat: CW *is* very bandwidth efficient. BUT...

that is no argument for *keeping* or *stopping* the code test. (Is that why you want to argue the point?) No matter to me how it comes out though, as I'll just continue to enjoy my low throughput human traditional mode of CW....

>We can fit five+ PSK31 QSOs running at 50wpm in the same bandwidth as 1 CW
>signal.
>73, Cecil, W6RCA

Big whup. I was comparing to the common modes of SSB and FM.
I repeat: CW is more bandwidth efficient (Possible hams per khz) than SSB.
I repeat: Who cares.
I repeat: Most use CW for fun, not efficiency.
I repeat: It has no bearing on keeping or stopping the code test.
I repeat: I won't be using PSK31 anytime soon.

Something new: Did I miss anything??

I was just informed, much to my dismay that the code test I will be taking
for 13wpm is actually sent at 18wpm for the characters and 13wpm for
the spaces in between the letters. Why??

This doesn't seem fair I guess.

So, what is the 5wpm test sent at? 10wpm?

sda

as a private pilot myself included, we should destroy ham radio by
keeping saying no code = no ham. moreover, the free bands will be
avaialble for aviation if we so desire.

>the spaces in between the letters. Why??

This method is known as the "Farnsworth" method and is actually easier to copy. Each character is sent at 18 wpm, but the spacing is such that they only come at a 13 wpm rate. The characters are more easily recognizable at the faster rate, and the additional space between them make each one more distinct. I'm surprised no one mentioned this method to you before. Just practice with this method, and you should have no problem.

> Hugh Jass

Just my two-cents worth:
to become proficient at morse code -

(1) learn the morse characters

(2) Get a HF rig, listen in on the 40 meter novice band, and copy the
slow ones

(3) Pass the 5 WPM test, and start making contacts and don't worry
about speed. Strive to send good code. Smooth and steady. Don't
worry about speed.

(4) Make a few contacts each night - don't worry about speed

If you can do the above, your code copying speed will increase without
your realizing it. Go ahead and get yourself a HF rig. You ARE going
to need one, aren't you? I bought a good used one for around $250 and
stayed on 40 meters CW with a hand key, and went from novice all the
way up. I listened to the tapes one time, put them away, and started
listening on the air.

I think the people who have the most difficulty with morse code are the
ones that only want to upgrade their license and don't plan on using the
code. They are missing out on a lot.

Good luck!
Tom K4AKC

601. 2-meter use as business Also?

Newsgroup: rec.radio.amateur.misc

-----BEGIN PGP SIGNED MESSAGE-----

Patricia Gibbons, WA6UBE replies:

The HOT sectors are:

1:PCS-band cellular,

2:NexTel Communications,(Nextel is buying up the older 800 MHz
SMR-Trunked systems and converting them to networked digital
systems for regional radio coverage in a
"sort-of-like cellular-phone" system.

3:Motorola's new "Iridium" world-wide phone system utilizing
low-earth-orbit satellites and hand-held phones that go anywhere.

4:With more standardization of the new 700 MHz Public-Safety radio band,
expect to see more products and infrastructure, and equipment for
interoperability with State and Federal Agencies.

5:Police Mobile Data (we have swapped out all of our lower-speed
Motorola KDT480 terminals (4.8 KB) in favor of ruggedized laptop PC's
in
our police cars, and the newer VRM600 mobile radio modems operating
at 19.2 KB.

6:More use of devices that incorporate 2-way paging, and e-mail
in portable devices that replace the ubiquitious pocket pager.

7:More use by the public-at-large of monitor and alert receivers
that are compliant with the new "Emergency Alert System" (EAS)
standard that is now replacing the old EBS System. These devices
will be more relied-upon by the public in order for residents
in local and regional areas to receive emergency broadcasts and
information from Federal, State, and local agencies.

8:Expect to see more "cross-over between technologies"
such as:

GPS in Police cars for Automatic Vehicle Location (AVL), tracking
and dispatch.

Fingerprints and photos sent directly to Police cars in the
field from dispatch centers, and with more advancements in
internet security, a closer connection between Public safety
mobile units (both Fire and Police) and the internet as the
net becomes a more integral part of a public-safety
communications infrastructure.

Moving the internet to more remote locations via both satellite and
HF radio techniques, such as commercial maritime use of the internet
for fishing, commerce, and messaging.

"Radio maintenance technicians will overlap with ISD/IT/computer techs
as the boundaries between the two technologies blur, forcing both
fields
to cross-train in order to be competitive in the job market." --My own
quote

Looking for the FIF-232C or the W1GEE interface cable Model LCU-3Y1 for Yaesu (FIF-232C Compatible)

Help with PK232 to FT990 hook-up:

The way that the Din plug looks in the book based on the diagram is that the little indent is on the botton that would
mean the narrow part is on the top. When you look at the back of rig it sahow the other way. When I hook it up based on the book. The rig keys ups but does not send Rtty correctly. I have wired like the following.

If you go by the FT990 Manual I wired the following: (Narrow part of plug on top)

Din Plug: Pin 3 goes to Red Pin 5 of PK232
Din Plug: Pin 2 goes to Green Pin 1 of PK232
Din Plug: Pin 1: goes to White Pin 2 of PK232

Symtoms: RIG Keys up and Receives great, But no RTTY.

If I wire the plug based on the back of the rig(FT990, Wide part of plug on top)

Wired the same as above

Symtoms: Rig stays in transmit mode

Any input would be appreciated muchly.

73, Tom - N1ZPC

It is technically possible to "out band" amateur gear, but it is illegal to use non-Type Accepted equipment on the business bands. It is legal to go the other way, however. You can have amateur frequencies programmed into your business band radio. The upside of this is that 1) you're legal, 2) the business band radio is probably better built, IE rugged, and suffers less IMD. The downside is that some of the bells and whistles of ham rigs won't be available, IE scanning, VFO style operating, etc.

If you just need a few repeater and simplex frequencies, reprogramming the business band radio is the way to go. If what you really want is a scanner that happens to be able to transmit, then a ham rig is what you want, but don't transmit out of the ham band unless it is an immediate threat to life situation.

Forgetting to bring your business band radio doesn't count as an emergency, and trying to save a few bucks doesn't count as an emergency either. The times when you could legally use a ham rig on business frequencies are so rare that you're generally just fooling yourself if you think this would be useful.

No, just old. Looks like the last year it was made was 1991 for the 8640B. I doubt I can find a manual for one here (we do disk & laser printer stuff here), but I'll look around.

It is pretty straightforward, 0.5 to 612 MHz (with option 002 it can be doubled and go to 1024 MHz, look on the serial number label for option info, probably). Built in freq counter, can do AM or FM modulation. This info is from my 1991 HP catalog, list price was a mere $14,600 (+ $1255 for option 002). The service manual is listed as part number 08640-90215, operator manual looks like it has part number 08640-90208. I don't know if you can still order them though.

The HP 8640A is a commercial signal generator - no doubt used by the
military too.

IIRC the 8640A is a free-running device, the 8640B is a phase locked version
using a tuning motor and varicap to drive the cavity tuned oscillator. The
basic frequency coverage is 256-512MHz with some overlap at the ends. For
frequencies down to 1 MHz the 256-512MHz output is divided by 2^n before the
output amplifier. I think that there was a frequency doubler to increase the
range to 1024MHz

IIRC the instrument was manufactured in the early '80's and was (and still
is) a pretty good signal generator - particularly for those who can drive an
instrument that doesn't have a key-pad.

Good points, Gary, all of them. And certainly, when the technology is available, there is no reason to resort to something as basic, and as simple as CW.
However, when technology fails, and it WILL fail, simpler alternatives are require to continue the communicative process.

Your arguments about the receptive centers and data processing ability of the brain are strong. But then fail to take into account the adaptability of a disciplined mind to required circumstances. And your claim that the weakest link in any communicative chain is the operator has its own merit. However, the strongest link in any communicative chain can also be the operator, overcoming even the limitations of technology, and failure.

When the technology has failed, as it will, and as it always has, there will still be, as there have always been, circumstances when communications must get through despite the QRM. A qualified operator with a straight key can still do it, in less bandwidth than other options to digital, and spectrally frugal emissions. A qualified operator can still overcome, with training, practice and experience, with his highly adaptable brain, with simple switch on, switch off keying, using simple text, and abbreviated codes, without need for digital adaptations, without need for templates, without need for conversions, and all the hardware that is required to display text...and do it in a few tens of hertz, positively and certainly.....he can do it efficiently, when failure is not an option.

The one thing that history has proven to us, is that time and again, new development, and progress will bring us forward from a primitive age. And no one is suggesting that that should not happen. Not even in ham radio. The argument that manufacturing technology has passed ham radio by, is well made. So it is with all amateur pursuits. But what is not so apparent, is that magic of ham radio is, as it has always been, the development of adaptations to contemporary thinking to achieve communications possible within limited budgets, and with limited resources. And do it with efficiency measured not in technological terms, but in terms of the amalgam of Human adaptability AND technology. CW is the essence of that amalgam.
Your detailed and technical post was very informative, and made very good points.. However it does not account for the ability of the human mind to ignore the limitations placed on it by the hardwiring of evolution. Or the perception of same. And training and experience have demonstrated this time and again. Your argument assumes limitations that are at best voluntary. And can be voluntarily overcome.

90% of the human brain may indeed be visually dominant. That means 10% of this complex and magnificently adaptive device can be focused on any of the other senses, trained in discrimination of detail, and applied with

staggering vigor. Your argument here, about the immutable hardwiring of evolution is not only nonsense, it is openly controverted by the existent of visually impaired superstars in their fields. How can one with 90% of his/her brain disconnected from its primary purpose hope to have a fulfilled life? When you get that one by the National Federation of the Blind, let me know.

But your argument is fatally flawed in one major regard that is never addressed in this newsgroup. Technology is definitely an alternative to bucolic brute force. A rifle will bring venison to a table better than a club. To be sure. But that assumes that the rifle will always be there. Or that the powder will always be dry, or that the firing pin will remain intact. But, again, what happens when the rifle is not there? What happens when the cell phone doesn't work? What happens when the keyboard develops a bad chip? What happens when the modulation transformer developes an open primary? What happens when the technology isn't there?
Commitment, training, and experience can overcome mountains and even physical adversities. Beethoven comes to mind. Edison, Ray Charles, Terry Fox, who ran across the continent after a leg amputation. And even the lowly and incompetent weak link, the CW operator. Who, armed only with has visually committed brain, can still manage to pull off a solid and clear communication in less than 35hz by something so sophisticated as tapping two wires together. When the technology isn't there....CW still is. It is a foundation. It is a basic form of communication. It is a form of communication that is technically stripped to its bare minima, relying on the richly sophisticated adaptability of the operator to make meaningful communication, inan aural medium.

If you wish to make an argument for efficiency, then CW is the one.
Wider bandwith than some, to be sure, but capable with lower baudrates of transmitting a wide range of information. No templates, no frames, no packets, no conversions. Only an operator, his brain and a key. At least two of these things are found at each end of all communications.

Efficiency.

No, when technology fails, we *repair the fault* and proceed on as before.
That's what separates us from the users of Type Accepted radios. We
are permitted and encouraged to raise the lid, they are forbidden to do
so.

When and why will it fial. and then if it fail some how, gow
is that that CW will left able to run? In addition how does neding
Morse Code testing result in the ARS suddenly being unable to to
process CW signal

<snip>
> When the technology has failed, as it will, and as it always has,

When has it failed.
>there will still be, as there have always been, circumstances when

If there were some massive breakdown, then Bandwidth would
become an irleavnt considertion since IF technolgy breaks down then
MORE band width will become avalable because there will be fewer
possible users of it.

>and spectrally frugal emissions. A qualified operator can still overcome, with
>training, practice and experience, with his highly adaptable brain, with
>simple switch on, switch off keying, using simple text, and abbreviated codes,
>without need for digital adaptations, without need for templates, without need

Indeed lets conceed this point fro prupose of discussion, why
does every ham need to be tested on Morse Code in order for the ARS to
utilze these virutes? The ONLY this would happen is to add that in
the event that Code testing is drop to assume that Morse Code use
CAN'T compete for the attention of the operators in the ARS.

>for conversions, and all the hardware that is required to display text...and do
>it in a few tens of hertz, positively and certainly.....he can do it
>efficiently, when failure is not an option.

Gee when is this goiong to happen? A situation that will
cuase all non CW based mode to fail, leave people alive to save, and
that there be a message that the passage of will have life and death
import. This combination seems extrremly far fecthed. After all if

this signal is passed how will the receiving party DO anything about,
or will this disater which is going to destory all non Cw transmission
capcity not going to bother our increaingly technolgy dependant
tranpost system so that somebody can DO something with that message

<snip>

>technological terms, but in terms of the amalgam of Human adaptability AND

>and again. Your argument assumes limitations that are at best voluntary. And
>can be voluntarily overcome.

Accepting that this may be correct (for the purposes of
discusion) Why does the ARS have the right to REQUIRE all hams make
this effort, which surely you will conceed is harder for some than
others, in order to allowed admitiance. Frankly this paragraph seems
another way of saying "we did it so you have to" with frankly more
overtione of the master race throies that were, (I have always
beileved) discredited in the 1940's
.
>
> But your argument is fatally flawed in one major regard that is never

Nobody is talking about cell this the ARS. Or are you so
missinformed as to thinik Cell phones are the ARS? The Keyboard you
replace.

>What happens when the modulation transformer developes an open primary? What
>happens when the technology isn't there?

When/how is this great failure going to occour.

> Commitment, training, and experience can overcome mountains and even
>physical adversities. Beethoven comes to mind. Edison, Ray Charles, Terry
>Fox, who ran across the continent after a leg amputation. And even the lowly

What is your point that only the greats of the world are
entitled to be hams? If so then the ARS is doomed, due lack of
numbers. Why should anyone be forced to amoug the great in order to
utilze the ARS? And surely you don't contedn that the Wizards of 80M
are paragons of Human virtue.

>and incompetent weak link, the CW operator. Who, armed only with has visually
>committed brain, can still manage to pull off a solid and clear communication

And just how does ending Code testing stop this incompetent
weak link to use your word from doing this

>When the technology isn't there....CW still is. It is a foundation. It is a

A simple Lie. If technology is not present CW is not either.
It is a simplier tech but still tech. It is not the fonudation it is
an apllication and is an application that is in no way changed or
altered by ending Code testing.

>basic form of communication. It is a form of communication that is

It is not a BASIC from of communication, Speech is the basic
form of communication

Gee why do we need spectrum at all, after all CW does not need
radios or RF access. It allow needs an ear and a lifestyle commitment
to maintian an arcane skill.

>of these things are found at each end of all communications.

You can type that with a straight face after reading these
NG's awhile, a brain is present at both.
>
> Efficiency.

No according my difinitions of efficiency. and that brings up
the finalo question: Why do ProCoders assume they have the right to
make the definitions. Counting on CW is by my standards wasteful,
creul, in effeicent and opposed to pruposes of the ARS. Now I and
othe rest of the NoCoders are willing to alow you to see thing
diferently and spend YOUR time as you choose but you refuse to allow
US the equal treatment.

So CW gets through even when the technology (RF transceiver) has failed?
If you can do that, why bother with CW. Why not use ESP directly?

RF circuitry is certainly much more likely to fail than digital
circuitry. Every modern transceiver has a computer built into it.

Why are not all HF hams existing in a hobby in a free society free to
choose their own survival techniques? If CW were truly a necessary
emergency mode, hams would be periodically re-tested and required to
own a CW rig and antenna. What good is Morse code skill if a ham
doesn't own a CW rig?

HF hams are not even required to have a first-aid kit. Why CW? Why
not require things much more necessary to survival like food and water?
Why are they required to possess your personal favorite survival technique
and not required to possess infinitely more important survival techniques?

>Pardon me, but Part 97 doesn't say anything about "having fun" as being a
>part of the purposes of ham radio.

If your not in it for the fun then time to get a new hobby. If our licenses were held to Part 79 (As ancient as CW) then there would be very few hams indeed.

>You can't speak of bandwidth efficiency without including some measure of
>communications rate.

Been there in the last post. No need to repeat.

>Who cares? Why design an efficient antenna system when you can just add
>another amp?

Most hams build antenna systems from articles and books, or just buy commercial antennas. Would you post your new, never before designed, efficient antenna system design? I won't hold my breath.

As to power, I always run 50 watts or less to a commercial inefficient antenna (R7) and it works great. If I were making the rules I would go the Japan route: A ten watt limit. That would help a lot with the RFI and put in some challenge to boot.

>You might as well be upset that your radio is dehumanizing your
>communications. There is hardly an electronic device that doesn't benefit
>from the addition of computing technology.

Not me. I use the latest technology equipment (Well almost, a TS870) to send my ancient CW. I need it (DSP noise reduction) because of my high noise city location. It's not at all unhuman. But I do enjoy CW for the human aspect, that's true. I don't need to talk any faster (throughput) though. I'm retired and have plenty of time.

>The argument for ending code testing was made quite eloquently by you: you
>admitted it was just for fun. I can imagine no rational that would allow
the
>government to require me to practice a particular form of fun.

No admission here Mark. I've always said the only value in CW was the fun. I often get attacked from the pro-code side for that. The only rational for the CW test in recent years is the weeder value. It keeps out the less than serious. I really don't care if it's eliminated, in fact I'm sure it will be eventually. If the elimination of the code test does bring on the unwashed as many claim, at least they won't be bothering me on CW...

I tend to believe the decline in numbers is for real. I think it's
been covered up partially by the change in the length of expiration of ham
licenses. But, has actually been happening for some time.

Really, I think we need to make 2m/440 FM more fun, somehow. I think that's the
where people are entering the hobby, and finding it's just not working for them.
You know, cuz' of jammers or just not being able to start up conversations or
whatever. I'm not sure, myself.

>We can fit five+ PSK31 QSOs running at 50wpm in the same bandwidth as 1 CW
>signal.

The argument of efficiency that is based solely on baud rate/bandwidth seriously disregards the REAL efficiency of CW...as was argued before, but never addressed by the baud rate/bandwidth people, CW can, in as little as three characters, ask a complete question. And answer it in only marginally more characters. And the technology need be no more complex than a simple switch controlling the transmitter.

Communication is more than bandwith and baud rates. Communication is what takes place AFTER the signal is sent/received. Communication is what happens in the heads of the operators. All the templates, all the frames, all the encryption/decryption is there. Technology is simpler, and less prone to failure, more readily reconstructed when other technology fail. And in an emergency, that means effective communication when resources are slim, and a signal must get through.

You may be able to fit five PSK31 QSO's in one CW channel, but that's onl y part of the efficiency equation: the baud rate/bandwidth part. There is another part of the equation that tech types wish to overlook, and thats the part that is stored within the operator. If you are sending identical text, yes there are other modes of communication that are quicker and use less spectrum. But when you want or need fast communication, want or need quickly or easily constructed or improvised technoloby, you won't find any more direct, and more efficient communication than a pair of qualified operators with keys.

The technology, the mode, and the code are as archaic as flint knives. And if your focus is on the cutting edge of communications technology, then the code is of little or no value. But consider that the cutting edge grows dull faster than the rest of the blade. And it is that which is BEHIND the edge that is less transient.

What the 'cutting edge' culture has shown us, in many aspects of our lives, is that all technology, all time tested thinking, and process or procedure, has its place...a place where it is the best fit. Just as, for a simple example, vhf AM has been selected as a standard for aircraft radio, over the quieter, and clearer, and more technically sophisticated FM, because of AMs ability to receive and read weak signals under conditions of heavy interference on channel, CW has its own place as a direct, efficient and technically reliable communication in the ARS, specifically in areas where technology may not be readily available for the more technically sophisticated systems. CW, as a requirement, therefore should not be abandoned, to ensure that those on the bands are available and ready to receive the coded message, when the coded message comes through, and there is no other technology available to put, for example, a PSK31 transmission on the air.

Technology may make communication easy, and more sophisticated technology may make communication accessible to a wider number of persons, with fewer qualifications....but the most efficient communication, is that which is based on simple technology with a qualified operator on each end. Meaning, in the final analysis, its a QUALIFIED OPERATOR at each end, that is the only essential thing that is needed for communication....and you don't get more efficient than that.

>wrong, it's been 10 - 12 years since I dealt with this one.

You got a little bit of it wrong, Wayne. The pilot carrier served two purposes.
Number one it cued the compandor in the receiver since the pilot level changed
with companding level in the transmitter, it was really an audio tone injected into
the compandor along with voice. This gave the radios characteristics similar
to NBFM voice quality by compandoring the noise floor, IE a poor man's DBX.
(The pilot didn't noticably increase occupied bandwidth. That's the part you
got wrong.)

Number two, it served as an AFC reference for automatic fine tuning. This is
what allowed the radio to be narrowband. In other words, it behaved to the user
as if it were a NBFM rig with no fussy tuning required, but it only occupied the
bandwidth of a SSB signal. So the spectrum savings was 13 kHz/3 kHz, or
a 4.33 times reduction in occupied bandwidth compared to NBFM.

The compandoring trick would work with any SSB radio, but the AFC required
modifications to the radio (receiver). That's no problem in manufacture, but
amateurs generally didn't have the expertise to do this correctly. (Or they
didn't care to do the modifications required.)

This was actually a pretty good idea. You could use the compandoring feature
with any SSB radio and reap the benefits in noise reduction. For weak signals,
the compandor would run wide open and the radio would be behave as an ordinary
SSB radio. With stronger signals, the compandor would start to work and you'd
get a noticable improvement in apparent SNR. Basically, it gives the SSB radio
a threshold similar in effect to the FM threshold improvement. And all you need

is connections to the radio's mic and speaker.

To be able to work with handheld radios, however, it also needed the AFC feature to make up for their generally poor stability. Most FM HTs in the 80s were lucky to stay within +/- 1 kHz. If it weren't for FM capture, they'd be a nightmare to use. They were totally unsuitable for ordinary SSB in a flip the channel and talk fashion. (The system was originally targeted to land mobile users, not amateurs.)

Two things killed the idea in the commercial arena, first was the opening of 800 MHz trunked systems which relieved spectrum pressure, and second was the move to an all digital radio standard (APCO-25) for the next generation of land mobile radios. So the system got dumped off on amateurs. But amateurs have even less spectrum pressure, and were perfectly content with NBFM, so it flopped with amateurs too.

I've glossed over some of the *problems* that ACSSB introduces. There are some, and they are fairly intractable. But with today's DSP, most of them could be licked. But with today's DSP, most of the benefits are moot too since DSP already offers noise reduction without the need for pilot carriers or companding. ACSSB missed its market window, and that window is now closed by better technology.

Hello all.

Yesterday I took and passed my Element 2 and 3A tests and now I'm anxiously awaiting the grant of my call sign from the FCC.

In the meantime, I'm trying to decide what radio should be my first. Do I want a 2m only, a 2m/440m, or a 2m/440/6m handheld?

Any advice in general about this or about specific radios would be greatly appreciated!

>long post each time..

Huh? What only lasts for a day at a time?
Certainly not posts. They last effectively
forever thanks to Dejanews, and last weeks
or months on many servers with long expires.
Just because *your* browser doesn't show
you the post again after you've read it once
doesn't mean it is gone. To someone who
hasn't read it yet, it is still there waiting
to be read.

There is no need, none whatsoever, to post
forsale items over and over. Once is enough,
and once is once too often on any newsgroup
except rec.radio.swap. That's the only group
in this hierarchy whose charter allows advertising.

To those who do buy and sell (on rec.radio.swap
only please), please post sufficient information in
your *one* post so that multiple emails are not
necessary to clarify just what the heck it is that
you're selling. And please, include a *working*
email address in your "Reply To:" field if you
expect to get any offers.

The Mastr II is best. It has real front end filtering. Micors are good too.
The older Hamtronics boards were crap, the new ones seem a bit better,
but they aren't hardened to handle a high RF site. The GE is. What this
means is that your duplexer will have to be lots better if you use the
Hamtronics than if you use the GE. You can often get away with just
a notch duplexer with the Mastr II, but no way will that hack it for the
Hamtronics. You'll need tight (and expensive) pass/reject duplexers
unless you're on a site with no other repeaters or pagers (an increasingly
rare occurance these days).

According to Section 106 of USC Title 17:

Subject to sections 107 through 120, the owner of copyright under this title
has the exclusive rights to do and to authorize any of the following:

(1) to reproduce the copyrighted work in copies or phonorecords;
(2) to prepare derivative works based upon the copyrighted work;
(3) to distribute copies or phonorecords of the copyrighted work to the public
by sale or other transfer of ownership, or by rental, lease, or lending;

By distributing registration codes for computer software, you violate the
exclusive copyright held by the author of the program, if the registration
codes unlock functionality within the software for which the author would
normally expect financial compensation. Numerous court cases have established
that doing so violates sections (1), (2) and (3) of the above chapter. By
distributing said codes to others, across state lines, by a wire-line carrier
(ie: the internet), you commit an even worse offense.

Per title 18 of the US Code:

Sec. 2319. Criminal infringement of a copyright

(a) Whoever violates section 506(a) (relating to criminal offenses) of title
17 shall be punished as provided in subsections (b) and (c) of this section
and such penalties shall be in addition to any other provisions of title 17 or
any other law.
(b) Any person who commits an offense under section 506(a)(1) of title 17 -
(1) shall be imprisoned not more than 5 years, or fined in the
amount set forth in this title, or both, if the offense consists
of the reproduction or distribution, including by electronic
means, during any 180-day period, of at least 10 copies of 1 or more
copyrighted works, which have a total
retail value of more than $2,500;

Note: Even if the software in question retails for only $100, if it can be
shown that you have illegally distributed 25 copies - it meets the
requirements of the above section.

Even if you don't accept payments for illegal transfer of copyrighted works, you violate the "financial gain" provisions of USC Title 17 section 506, which states:

"The term 'financial gain' includes receipt, or expectation of receipt, of anything of value, INCLUDING THE RECEIPT OF OTHER COPYRIGHTED WORKS".

ie: "trading warez" is just as bad an offense as actually selling them outright, under federal law.

The penalties:

(2) shall be imprisoned not more than 10 years, or fined in the amount set forth in this title, or both, if the offense is a second or subsequent offense under paragraph (1); and
(3) shall be imprisoned not more than 1 year, or fined in the amount set forth in this title, or both, in any other case.
(c) Any person who commits an offense under section 506(a)(2) of title 17, United States Code -
(1) shall be imprisoned not more than 3 years, or fined in the amount set forth in this title, or both, if the offense consists of the reproduction or distribution of 10 or more copies or phonorecords of 1 or more copyrighted works, which have a total retail value of $2,500 or more;
(2) shall be imprisoned not more than 6 years, or fined in the amount set forth in this title, or both, if the offense is a second or subsequent offense under paragraph (1); and
(3) shall be imprisoned not more than 1 year, or fined in the amount set forth in this title, or both, if the offense consists of the reproduction or distribution of 1 or more copies or phonorecords of 1 or more copyrighted works, which have a total retail value of more than $1,000.

On top of all this, you violate both state and federal intellectual property laws which would entitle the author(s) of the programs in question to bring lawsuits against you in civil court.

These, of course, are US laws relating to copyright infringement, but similar provisions apply in almost all countries which are signatories to the Berne Convention relating to international copyright protections.

Any text mode can convey those same three characters, so CW has no
advantage there. Requiring only a switch connection to the transmitter is a
bit simpler than PSK31, which requires an audio connection, but Feld Hell
can do the same thing using a simple switch connection to the transmitter.
Feld Hell is also bandwidth efficient, and works under weak signal conditions,
though PSK31 is better of course.

Simplicity of transmitting equipment is a bit of a red herring for most amateurs
since most will use the same transmitting equipment for any mode that they
operate. That equipment generally allows audio modulation input , but even for
equipment which doesn't, it is a trivial modification to allow the equipment
to do FSK with a simple switch closure. Only an amateur who is completely
technically incompetent would find this difficult.

>Communication is more than bandwith and baud rates. Communication is what

>emergency, that means effective communication when resources are slim, and a
>signal must get through.

It is true that the ultimate aim of communications is to convey some concept
from the mind of one person to the mind of another. To do that, both operators
must share a common conceptual language. That's not an issue here. What's
at issue is the method of conveying symbols translatable to that common
language via radio.

More specifically, we are addressing text based methods of conveying the symbols
translatable to that common conceptual language. Morse representation of text is
neither as accurate nor as fast as other text transmission methods an operator
may choose to use. It inefficiently uses the radio channel, and it is inefficient and
error prone to decode in the presence of noise and interference.

Other text transmisson methods work better in the presence of noise and interference. This shouldn't be surprising since Morse was designed for use over virtually noise and interference free wirelines. It was adapted to radio simply because there already existed a large pool of trained operators for it. Information theory was not used to optimize transmission coding because information theory had not yet been developed. Thus it is unsurprising that OOK Morse is one of the least capable methods in use. In other words, it wasn't engineered for the radio channel, it just took on that role by happenstance.

The situation here is analogous to the brute with a club fashioned from a fallen tree limb versus the man with the more intelligently designed club, IE a rifle. By application of intelligence, knowledge, and technology, the power and reach of the club has been greatly extended by making it into the rifle. This is a classic example of working smarter rather than working harder. By intelligently exploiting the leverage offered by technology,
more effective techniques are developed.

>when you want or need fast communication, want or need quickly or easily
>constructed or improvised technoloby, you won't find any more direct, and more
>efficient communication than a pair of qualified operators with keys.

That's total nonsense. The weak link in any Morse communications system is the operator. He is not well adapted to processing variable length monotonic tones. In humans, the visual sense is most highly refined. The brain devotes over 90% of its signal processing capacity to visual inputs, and less than 5% to aural inputs. This is hardwired by evolution, and training can't overcome this built in advantage. A good communications system recognizes this by presenting information to the operator visually.

The brain is an electrochemical computer of vast complexity. It is well adapted to processing information in a massively parallel way, which is a good thing since it's clock rate is very slow and has great difficulty in dealing with serial information rapidly or accurately. Therefore we want to present it information encoded polyphonically or in a visual matrix in order to take advantage of its massively parallel structures and avoid overloading its serial stream capabilities.

The human visual system is more than 10,000 times as massively parallel as the human aural system, so any communications system should take advantage of this by presenting information visually. Now a weak radio channel works best in bit serial fashion, so we need a conversion device to perform a serial to parallel conversion of the information before presenting it to the operator. Fortunately, we can do this fairly easily today thanks to the ubitquitous nature of VLSI.

>The technology, the mode, and the code are as archaic as flint knives. And if

>is of little or no value. But consider that the cutting edge grows dull faster
>than the rest of the blade. And it is that which is BEHIND the edge that is
>less transient.

But behind the edge of an iron tool is more iron, not chipped rock. Your analogy is flawed. A few passes with a hone, and you have your iron edge back. No amount of honing will turn the rock into an iron chisel. The rock doesn't have the toughness of iron, and will shatter when heavy demands are placed upon it. If you devolve back to stone age tools, then you can only do stone age work. That's a step further backwards than some of us are willing to countenance.

Pardon me, but Part 97 doesn't say anything about "having fun" as being a part of the purposes of ham radio. It does say that was are charged with self training and advancing the "radio arts". One might reasonably conclude that it is important to understand radio modes, their advantages and disadvantages.

> CW is more *bandwidth* (number of hams per amount of bandspace) efficient
> than the predominate modes SSB or FM. But so what? Nobodys going to switch
> modes because of that. People use modes because they *like* them.

You can't speak of bandwidth efficiency without including some measure of communications rate. Bandwidth and rate are interlinked. In the part of my posting you didn't choose to clip, I pointed out that the bandwidth and rate of Morse as is conventionally practiced is actually pretty close to SSB. This is because of sloppy receive filters and sloppy waveform shaping on transmits.

> Why? Who cares? This is not a for profit business, this is a hobby. Humans
> conversing for fun. No timeclock. You think I should send faster than normal
> on CW to make my throughput greater for better efficiency? I should go on
> SSB for even more even more throughput? What a joke. How about speed
> speaking classes for hams?

Who cares? Why design an efficient antenna system when you can just add another amp? Why try to ensure your radio doesn't overmodulate or splatter?

You might as well be upset that your radio is dehumanizing your communications. There is hardly an electronic device that doesn't benefit from the addition of computing technology. To deny that is just to revert to Luddism...

> I repeat: CW *is* very bandwidth efficient. BUT...

You can repeat it, but that doesn't make it true.

> that is no argument for *keeping* or *stopping* the code test. (Is that why
> you want to argue the point?) No matter to me how it comes out though, as
> I'll just continue to enjoy my low throughput human traditional mode of
> CW....

The argument for ending code testing was made quite eloquently by you: you admitted it was just for fun. I can imagine no rational that would allow the government to require me to practice a particular form of fun.

Mark

No, the 8640A is not a military set, just an obsolete discontinued
one. I bought one at Donnington Park (Leicester Rally) last
September with a known power supply fault in order to canabalise it
for an 8640B that I wanted to fix and improve. I only needed one
thick film amplifier module, the variable frequency modulator and
some knobs and front panel trim, so the major components are all
still intact. If you buy one and need something, let me know.

>
>So, what is the 5wpm test sent at? 10wpm?

Nope, it is 18 WPM too. This is Farnsworth Code. If you want to take
an actual Morse Code exam, shop around for another exam team.
Most W5YI groups give actual Morse Code tests, ARRL groups use
the Farnsworth Code instead.

You're right, it isn't fair. If we must have Morse Code exams, then the
exams should actually use Morse Code. That has internationally
standardized and precisely defined timing intervals for each of the
5 Morse symbols. Farnsworth Code uses different timing intervals,
so it isn't actually Morse Code. IMHO use of Farnsworth Code on
exams is cheating.

Could someone point me in the direction towards learning how to build a transmitter that'll broadcast on chordless phone frequencies?

Also, if anyone knows how to boost the output power of a baby monitor that would be great too.

Thanks much,

The ARS written test can and should be an effective filtration
system. Morse code testing has proven to be extremely ineffective.
Let's do something about it.

Source record: 153520
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Over Xmas I have been playing with the 15mtr mod on my chipswitched President Lincoln, since I got the password to open the radio below 24.8MHz.

The radio now tunes down to 20.900 MHz on the display. However the radio transmits and receives on a different frequency to that of which is displayed on the LCD readout of the radio as soon as the radio is below 24.800 MHz.

For example:

24.8000 MHz to 29.9999 MHz works 100% both on TX and RX.

If I tune to 24.7999 MHz on the radio's LCD, the radio actually transmits and receives on 25.0775 MHz

If I tune to 24.7000 MHz on the radio's LCD, the radio actually transmits and receives on 24.9860 MHz

If I tune to 24.6000 MHz on the radio's LCD, the radio actually transmits and receives on 24.8860 MHz

If I tune to 24.5000 MHz on the radio's LCD, the radio actually transmits and receives on 24.7860 MHz

If I tune to 22.7000 MHz on the radio's LCD, the radio actually transmits and receives on 22.9860 MHz

If I tune to 22.6300 MHz on the radio's LCD, the radio actually transmits and receives on 22.9160 MHz

Have you come across this problem before? and if can you let me know of a fix. It's really strange as the radio works 100% down to 24.8000 MHz and if I drop just 0.0001MHz to 24.79999 MHz then the radio fails to TX on 24.79999 MHz. But TX's and RX's instead on 25.0775 MHz.

I look forward to your comments.

-> MANY Radios/Computers for Sale -> Very Cheap -> Serious Inquiries Only

Read this if you want to see something better than hamfest's tables or money making dealers.

1) ADI AT-600 For Sale.

$250 CDN funds includes:

- A Handheld Transceiver
- Multi Rx (100-200 (AM mode aircraft), 330-500, 830-868, 896-1000)
It is possible to receive a cellular phone signal with images frequencies.

See http://www.radiotelephone.net/amateur/at600.htm for more information.

- WOW !!!!!! Multi Tx (100-200, 400-500), one mode.

CAUTION: It is illegal to transmit unless you have an approved license within non-accepted type bands (ie. Amateur Radio, C.A.P.)

- Low battery alert
- 120 / 200 memory channels
- 6 Station ID
- Clone Function
- DTMF decoding and DTMF paging
- Auto offset
- Crossband
- Dual Band Watch (VHF / UHF, VHF / VHF, UHF / UHF)
- Auto Power On
- Auto Power Off
- Time Out Function
- Can take external power

- I will attach a battery case

- I will attach a YAESU speaker microphone (functioning but no clip) as a free gift.

Everything for $249.99 CAN funds (it's about 1 US dollars against 1.5 Canadian dollar). Take advantage of weak Canadian dollars. For a price of scanner, you will get a tranceiver. Air

and cellular listeners, take this great offer.

2) IC-T2A FM 2m handheld (136-174 RX including auto weather stations scanning feature). Transmits 140-150 MHz out of ham band. (Caution: It is illegal to transmit outside of non-type approved band...). You do not need battery case because battery attaches to the transceiver itself. Uses 8 batteries, 1W low 4.5 W high. All of this for $159.99 Canadian funds. I will attach a realistic speaker microphone (which attaches this transceiver) as a free gift. You will also get another gift, Radio Shack Transceiver Case. It fits ICOM-T2A perfectlly. Don't miss this opportunity. MINT CONDITION.

3) Next following items can be sold as: Radio only or Radio and Power Supply.

ICOM-706 & Power Supply 12A Daiwa PS-120MIIa
$1199 includes:
A multi-band 160m - 10m, 6m, 2m tranceiver
100W FM/SSB/CQ/RRTY 40W AM output on HF and 6m, 10W FM/SSB/CW/RRTY 4W AM 2m. SWR and power meter are within ICOM-706. WFM mode included so you can listen to your local FM radio station no problem. I will attach a separation cable (you can separate front panel) as a gift. $1199 Canadian funds will give you all you need including power supply (and this power supply is voltage adjustable and includes voltage and amp meter). If you only need ICOM-706, the price is $999 Canadian funds but I also want to get rid of power supply as well. So I set reasonable price as quoted. If you want to get a power supply too, I can also give you a tuner for free. Tuner ? You need it for HF usually... Wow... getting a lot of things for $1199 Canadian dollars ? Amazing !!!!!

4) TRC-484 CB Radio 40 CH AM 4W (can be modified. http://www.radiotelephone.net/amateur/cbmod.htm). $49 Canadian funds. Shipped. Antenna included. Cigarette plug lighter attached. Mobile ready.

5) TRC-485 CB Radio 40 CH AM 4W, 80 CH SSB 12W (can be modified http://www.radiotelephone.net/amateur/cbmod.htm). $109 Canadian funds. Shipped. Antenna included. Will give you a cigarette lighter plug. Or I can attach it before shipping.

6) HF SWR/Power meter. $15 Canadian funds.

7) Radio Shack Illumina Storm (A neat light bulb... looks like many thunders and when you touch the glass / light bulb, the thunders will hit you !!)... for $20 Canadian funds. I believe there is still a extended RS warranty for another 1.5 years or so.

8) Pentium 120 LAPTOP Computer with more than 1 GB hard drive, Windows 95 (backup diskette will be included...), 16MB Ram for sale. $299 Canadian funds or best offer. You need to attach a CD-ROM drive if you need to use CD-ROM. A parallel or PCMCDI CD-ROM probably costs a couple of hundred canadian dollars here. Or... If you are

just looking for extra laptop computer by transferring the data from your desktop computer or use as a backup device by using parallel port, this is a very good buy.

9) Pay as you go Cantel / AT&T phone for sell. $40 Canadian funds. You need to get a new battery (still should be far cheaper than buying the original at $150 + case) although I will attach the old battery... current battery isn't working so well. Everything is in mint condition. I will give you a case free (umm... case costs $30 + tax. interesting eh ? just get extra phone for a price of phone case). I am looking for a unused prepaid card ($20 + tax) which will be yours if I find one. What a deal. Unbelievable.

==========

Shipping is included in quoted price (for Canada and US). If it costs $50, I pay $50. I also insure the products and this is included in the price as well. Good deal ? Why not buy 2 of the products above and I will give you 5% off. Buy 3 and 10% off or Buy 4 or more and 15% off.

FIRST COME, FIRST SERVE. Certified cheque, money order or bank draft only. C.O.D. is OK but I don't hear good news about it. C.O.D. is OK for Canada only. -> No personal cheque please. <-

Please send the e-mail to author: hugs@radiotelephone.net.PAS_DE_PUBLICITE (please do not forget to remove .PAS_DE_PUBLICITE) before sending. I will give reasonable period for payment. As soon as I receive your payment, I will ship the products right away. It seems that this works the best as I used to sell other rigs including scanners, power supplies, ham tranceivers such as htx-202 and htx-242.

Thanks.

688. FT-50RD mod problem

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-12 00:00:00 UTC
From: Mike Chanthara <mchn01@inreach.com>
Message-ID: <369BD0B8.15158C15@inreach.com>
Source record: 153522

Hi all,
I just went out and got a new Yaesu FT-50RD with serial no. 8GXXXXX.

So I proceeded to do a freeband mod on my little rig (removing solder blob and no.1 resistor). Re-assemble and powered back on with lamp/knob/pwr held down. Radio shows 144.00, then power off. Now power on again with lamp/PTT/knob/pwr held down I get the BAND -A1-. This is where I got stuck, when I press the knob again for 1/2 sec...nothing happens. I thought it was suppose to blink or something, but there was no BAND -FREE- to be found when I was turning the knob. Only HSS0,TISO,SILV.....etc with numbers next to them and then back to BAND -A1-.
Of course now I could not get the "radio now displays 50-540 590~1000 no

gaps!!!" to display when I power off. If anyone has more information on getting this mod to work on an 8GXXXX serial no. 50RD, or other freeband

modes please send it to me. Your help on this matter will greatly be appreciated. Thank you.

regards,
mchn01@inreach.com

689. IC-781 Mars/Cap Modifiable?

If I'm not mistaken, wasn't there a significant fee for obtaining a CB license until the mid 70s? I seem to recall a figure of $25, which wasn't nickles and dimes back in those days.

> If the ARS written tests were any sort of effective filtration

>the CW requirement were removed entirely.

It *IS* higher.

Usually most VE's encourage people to take exams they are not prepared to take. They say "go ahead, it doesn't cost anything more to take it".

For example, you go to a VE session to take your 5wpm code test. Most sessions run the code tests sequentially, starting at 20, then 13, and then 5. So, the VE sez "go ahead, and try the 20. if you pass, you don't have to take the 5!". Most people go ahead and do try, they figure they have nothing to lose, and they get to "warm up" for the test they are there to take.

or, say you go to take your codeless tech exams. The VE might encourage you to try the code tests. Or, once you've taken your 2 and 3a elements, the VE will ask if you "want to try the 3B? it doesn't cost anything more!"

The "70% pass rate" you refer to is actually a "30% fail rate". The "fail rate" is OVER stated, which means the actual pass rate is UNDER stated, exactly for the reasons I've outlined above. If you measured the pass rate for elements people go to take when they are actually "prepared" to take them, I suspect you'll get a significantly higher number.

Unfortunately, due to the way VEs report data, there is no way to accurately determine what the "true" pass rate and fail rates are. All we can determine is they are not at all accurate the way they are reported right now.

They have been sold under different names for years,if you live in an area remote enough that nothing else will work then go for it.These things ,are extremly annoying to the users as you have to wait for your message to be recorded,retransmited,then the other parties message to be recorded and retransmitted.Anoying to others for the same reason plus it takes up space in a band that can be crowded.In any event it takes twice as long to finish a QSO this way than if it were on simplex or a regular repeater.Some question weather these things are being used legally.AB7RS

Dear Markv and others,

While the government may or may not have the moral authority to grant or deny access to the electromagnetic spectrum (insert freebander debate here...), the FCC has generated a set of licensing benchmarks through which many amateurs have passed ("Incentive Licensing"...etc). As such, the various licensing levels represent a hierarchy of achievement within the amateur ranks. Yes, there are a lot of other respected amateur awards that are available, but none of them have any effect on your HF bandwith privileges. I'll never forget how great it felt after walking out of a VEC session with a shiny new General Class license! One old Dragon Slain! A month later at the next test session, the Advanced ticket was mine - another Victory. Now for the Extra...but I have to get my code up a few more wpm first... This is what I meant by "earning it".

You have implied such yourself, Michael. Either ham radio has been dumbed-
down or it hasn't. If it has, Morse code testing has proven to be extremely
ineffective. If it hasn't, then you have made false statements.

I never said I was 4F nor was I ever 4F. The incident happened in the
military R.O.T.C. program at Texas A&M which was an all-male military
college during the 50s. I was later classified as 1Y because of migraine
headaches. Perhaps that is what you are remembering.

Nope, PSK31 is in common usage. It runs circles around CW.

I also am a new operator and I purchased an Icom IC-W32A 2m/440 rig. Lots of nice options like auto-repeater,a large memory bank, and complete configurations of tone, power, contrast, etc. Ham radio Outlet http://www.hamradio.com is running a sale on them for $279.95. A bit on the higher end compared to some transceivers, but I am glad I paid the extra amount even as a starter.

Good luck.
Michael

I'm trying to find the RS232 interface for the ICOM
R-71A, or a schematic I can use to build my own.

I believe it was called a "CT-10".

Had some feedback that the current "CT-17" would work
but would like to hear from somebody who actually
uses it.

What does "CI-V" have to do with RS232?

Any help would be appreciated.

Thanks,

Jim.

I'm wanting to upgrade to a new receiver with computer
control, but don't want to be forever at the mercy of
third-party software (no matter how good).

To my knowledge, ICOM, JRC, AOR do not publish their
RS232 interface specs. Has anybody reverse engineered
them and posted this info to the web?

Any help would be appreciated.

Thanks,

Jim

PS: Prefer email responses to: mailbox2@ns.net

PPS: Might not need a new receiver if I could find
the RS232 interface for my ICOM R-71A. Any ideas?

>range to 1024MHz

The 8640M and 8640B can be phase locked, but only in fairly large steps.
There is no motor. You tune manually, then switch to lock. There is
a fine-tune knob as well as the main knob that covers an octave.
There are banks of filters to get the divided-down square wave cleaned
up and pretty low harmonic distortion. It covers to just below 455kHz,
to get the common low freq IF. They also have a pretty decent attenuator
for low-signal outputs...I assume the 8640A does as well.

The set was HP's first non-tube RF generator, or nearly the first, and they
were keen on upholding a reputation. There are a few HP synthesized
gens that have lower phase noise, but an 8640 A or B in good shape is
no slouch in the phase noise category. If you can find an 8662 at a
reasonable price and it's in good working shape, by all means get that
for exceptionally low phase noise (and very fine frequency control...
fully synthesized). There was a good article in the HP Journal on the
8640, and it may possibly be on their web site (though unlikely).

AFAIK, ICOM has very thorough description for their protocol in the
service manuals of IC-735, IC-765, and maybe others, too. Unfortunately,
it can't be found in users manual accompanying the radio.

Your quite correct, 2/440 is used for ARES/RACES etc in most places, never alot of "roundtables" anymore, The only major nets in my area are the ARES nets, which I've stopped checking into, beacuse most of the people that run them are too lazy for anything else.

Our Club used to have a Monday nite net, but the people who ran it got "burned out" too bad

In the Karl Rothammel's book "Antenenbuch" (antenna book) page 153 you can read this about G5RV: "Diese beliebte mehrband Draht antenne wurde in 1946 von L.Varney - G5RV entwikelt ... " I guess the year above tells you all. If you
need translation I guess you may find it yourself before you apply for patent (you
have to do something, after all) And maybe you consider patenting electricity,
this time called KH6-power ...or so

Source record: 153577

Hi Folks,

I posted this request to a different series of newsgroups (dealing with cable TV) without any success. Knowing how some hams can be packrats and save almost everything, I thought I would try the rec.radio groups.

About 3 years ago I purchased a cable tv converter box for a tv that is not cable ready. I have lost the user's manual and cannot program it. If anyone has the user's manual for the following converter box. I would be glad to pay the reasonable cost of copying it.

The converter box was purchased in a discount department store. It is made by RECOTON and the model number is V 642. The nomenclature on the front says 83 channel remote control cable converter.

Please e-mail to the following if you can help. Thanks in advance.

Let's inject some rational thinking here folks.... This statement implies that there should be no merit selection for anything in life. If anyone is excluded, then its a biased system. We're all just entitled to everything -- no discrimination, even when based on skills and capabilities. This attitude is responsible for the general decline in the educational system and ultimately society itself. Do you want your doctor to have been passed through the system without any "WEEDER" tests to determine his/her merits? How about doing away with tests and grades in school, too? Then everyone will be equally ignorant and dysfunctional.

Folks,

While there is less activity on the 2m/440 repeaters in the Albany, NY
area than there was a number of years ago, a lot of regular nets and
just plain old "rag chewers" are always around to brighten up a long
drive. I also have a lot of good QSOs during my frequent trips to the
San Francisco Bay area and auto trips across the Central Valley. It's
not that bad everywhere..... I have yet to hear any repeater jamming.

Hey Curt...

Do you want your doctor to be proficient in telegraphy? An arbitrary
requirement is irrelevant irrespective of the discipline.

Arbitrary power is most easily established on the ruins of liberty abused to
licentiousness.

George Washington

That statement implies no such thing. An *arbitrary* requirement *IS*
a violation of the rights of people in the USA. Relevant requirements
are not. Medical school is a relevant requirement for a doctor. Morse
code is an irrelevant arbitrary requirement for hams. If Morse code
was a relevant requirement, there would be no such thing as a nocode
tech license or a code waiver.

He's not whining about learning Morse code. He is objecting
to being tested with a technique that violates the Morse
code specification. The ARRL Handbook specifies three elements
for intercharacter spacing for Morse code and then violates
their own specification during the code exam.

> I've always said the only value in CW was the fun.

Clearly you don't know much of anything about
communications history to make such a statement. You don't
write down what you copy and have neve done any traffic
handling on CW. To you, CW *IS* only fun, and you assume
along what all the no-coders insist, that the late digital
communications sytems will always do for you just what they
say they will; no designed-in economies or unforseen
shortcomings in these systems will ever cause them to force
you into searching for a mode of communications outside the
mainstream. Oh, well if that should someday happen, you
wouldn't be able to use CW for real radio communications
anyway. After all, CW is "only for fun", not for real live
use! Ever. "That's the way I've always done it".

Wanta bet? Your lack of ability to extrapolate into a
future projection a signifgicant portion of the hundreds of
thousands of CURRENTLY LICENSED no-or-slow code hams into
the digital segments and to blithely say "They won't bother
me" with your 50 watts and R7 vertical...it's amazing. You'd
better plan on putting up a GOOD antenna and buying a QRO
amp of some kind...

You've always said CW gets through when nothing else will.
Seems you are now saying that digital will get through when
CW won't. Which is it? You can't have it both ways.

If the bedlam of the 50s CW bands didn't bother you, I can't
see any reason why anything should bother you now with more
sophisticated filtering available. Besides, we can get as
many PSK31 QSOs in the bandwidth of one CW QSO as we can
get CW QSOs in the bandwidth of one SSB QSO. Thus CW will
be the bandwidth-hogging mode.

All you need to solve the problem is a Morse code to PSK31
encoder/decoder. You interface to the system in Morse code
but the RF signaling takes advantage of the superior digital
mode characteristics and we can get 5-10 QSOs into the same
bandwidth as one CW QSO is in today.

I will have to agree that arbitrary testing is not a good thing (i.e.
all citizens of the US must know how to jump rope...etc), but the
statement I referenced appeared to have a larger implication. I was
referring to a prevalent general attitude against having to actually
earn anything. Isn't an accomplishment worth more if you have to put
some effort into it?

On another note -- why is CW not relevant to amateur radio? It is a
legacy and provides a historical connection with the birth of the radio
art. It is also a fun and interesting mode. What benefit would be
reaped by converting amateur radio to multi-band CB?

Not if it's irrelevant effort. In the military, I once had to dig a
hole and fill it back up five times. Was that an accomplishment? It
sure was a lot of effort.

> On another note -- why is CW not relevant to amateur radio?

It is relevant to amateur radio, just not equal in relevancy to
everything else in ham radio combined. One can miss all the questions
on SSB or FM and still get a ham license. The question is why is CW
more relevant than more popular modes? Why is Morse code half of the
testing and everything else the other half?

> What benefit would be reaped by converting amateur radio to multi-band CB?

Why would making the testing more relevant convert amateur radio
to multi-band CB? Your question doesn't make sense.

We're not talking about the relevance of CW. We are talking about the
relevance of the REQUIREMENT of the Telegraphy Examinations. No one is
advocating 'converting' the ARS into anything.

Icom publishes a very comprehensive reference guide titled "CI-V Icom Communication Interface - V Reference Manual"

It is very comprehensive. I have an older copy so the one I have only covers the following radios.
IC- 725, 726, 735, 751, 781, 765 and 781 for HF
IC-271, 471, 1271, 575, 275, 375, 475, 1275 and 970 All mode
IC-R71, R-72, R7000, R71000, and R9000 receivers.

It certainly covers the R71, at any rate.

The reference book talks about the electrical interface, the message protocol specs, has a sheet on each command, the response, etc etc -- As I say, it covers every aspect of the interfaces in 7 chapters and about 42 pages.

Just call them up and get it -- I forget how much it costs, seem to remeber about $20.
Now if that is too much -- I searched the web a few years back and found that someone had posted a softcopy of the list of commands and responses -- sorry, I forgot where it was -- but I did find it with a lycos search. It seem to be missing several commands when I compared it to the book and didn't talk about message protocol and format.

There seems to be only 12 commands for the R71 -- set freq / read freq / read memory / set memory / set mode / select VFO is about all.

cheers

Rick W4RP

ANUAL REPORT VHSC 1997
On December 31st, 1997, we had 325 members. On Dec. 31st, 1998 we have 324 members. In 1998 we welcomed 2 new members. We have 3 silent keys, vy sri!

On 31.12.97 the VHSC-Committee consists of: PA0LOU, President PA0DIN, Secretary-Treasurer and DK5JI, President of HSC.

DONATIONS CAME FROM: DJ4KW-DJ6ZM-DJ9SB-DJ0ZM-F3CW-F5USH-I2UIY-Z23KV - THANK YOU VERY MUCH for your good help!!!

HIGH SPEED TELEGRAPHY Championships 1999
The IARU Region 1 High Speed Telegraphy World Championship will take place from 28th April to 2nd May, in Pordenone, Italy. This event is not only a competition, but a world-wide meeting of CW enthusiasts. If you like to make QSOs and receiving callsigns, you are welcome in the competition too. During the championships there will be other events too, like Electronic and HAMRADIO fair and excursion to Venice.

Please contact for more details the HST-Coordinator:
HA3NU, Laszlo Weisz, Box 169, H-7100 Szekszard, Hungary
eMail mailto:HA3NU@npp.hu

Participation in the HST is possible via national club (IARU-member). You may participate in any number of these categories:

A - female juniors (<21 years of age) B - male juniors (<21 years)
C - women (21-39 years) D - (21-44 years)
E - female oldtimers (>39 years) F - male oldtimers (>44 years)

The team in each category consists of 2 competitors, i.e. 12 competitors at most. Individual participation is also allowed and welcome. Additionally one Team Leader may be added to the Team as well as many numbers of officials, accompaning persons, journalists, etc. Pse contact for more details your national society.

HSC MARATHON 1999
Make as many QSOs with HSC-Members as possible, on all bands, with CW, during period 1.1.1999 - 31.12.1999. Score is 1 point per QSO per band with different HSC-members. Total score is the sum of all points you earned. Sent your log to:
DF5DD, Werner Hennig, Holzstr. 312, D-59556 Lippstadt, Germany, before 31.1.2000.

Results HSC Marathon 1997: 1. HA3NS - 598, 3. DL1BUG - 335, 4. HA3NU - 308, 7. HA3OV - 230, 12. PA0DIN - 126

CW - WEEKEND!!
Like "in old days" in Buedingen, there will be a big CW-Meeting again, where CW-fans and members of various CW-clubs will have an exciting get-together! The event takes place from 7 - 9 May 1999, in D-56479 Willingen, near Herborn, Germany. There is a hotel, but you may use your tent, caravan, etc. as well. There is plenty of room for your antennas! COME, SEE and you will like it!!
(Hotel "Fuchskaute" Tel.: 02667 - 368, Fax: 02667 - 846).

Please let me know when you change your adress!! Thank you!
Happy 1999, Join the HSC-Marathon!!
Vy 73, gud QRQ, cu,

Premise: Eliminating Morse code testing will convert amateur
radio into multi-band CB?
Proof: ??????????????
Conclusion: Eliminating Morse code testing will convert
amateur radio into multi-band CB.

Curt is obviously guilty of assuming the conclusion without
any proof whatsoever, a common logical diversion.

CI-V is Icom's protocol. RS-232 defines an electrical interface spec. -3
to -15 volts for a 1 and +3 to +15 for a zero.
The CI-V uses TTL levels, i.e. 0volts for zero and 5 volts for one.
In addition, the CI-V uses the same pin for transmit and receive rather than
pin 2 and 3 of the RS-232 spec.

Converting it is very easy. I used a Maxim 232 IC that converts 5 volts to
plus/minus 9. They only cost a buck or so, and you only need one of those
and 4 capacitors. The chip is specifically made for converting TTL to
RS-232 and that is all you need to do to hook up your radio to a PC.

The voltage conversion is all that is necessary to interface to a standard
PC RS-232 port. Since the CI-V uses one pin for xmit and rx, every command
you send the radio will be echoed back to you. So if you write software, be
prepared to send a command block and see it right back at the input, so you
just need to discard it.

cheers

From: mark beutler <mbeutler@tds.net>
Message-ID: <369B84D2.2D64387B@tds.net>
Source record: 153597

Could someone please tell me something about the Kenwood R-5990
receiver? Cannot find info on it (even at the Kenwood page) and would
like to find out more about it. I know someone that may have one for
sale, but no manual and they know nothing about it. Any help would be
welcome.

TIA

What is the definition of a weeder test?

Does it mean using the test to weed out only those who can't understand fully the subject matter at hand? Then yes, I would certainly want a doctor to understand the subject matter.

Or does it mean using the weeder test to limit the number of people that enter a hobby? That is effectively what the ham tests do. The code test evaluates a manual skill and the written test evaluates memorization ability. Heaven help us if the doctor's tests were of this type of weeder...

Well lets see:
1. The FCC made the no-code license and
2. The FCC made the code waiver
So the FCC must determine what a *relevant requirement* is. (Your logic)
3. The FCC made the Morse code test
Therefore the Morse test *is* a relevant requirement... (My use of your logic)

The real bandwidth hogging mode is SSB and you not going see them go away anytime soon. So why worry about bandwidth hogging CW, which also will be here the rest of your lifetime at least. But with the coming decline of ham radio population, even with easier tests, bandwidth won't be much of an issue anyway...

Body handling: Binary attachment payload not displayed: vcard.vcf

> Jim

I have been looking for an interface for the 71R also. I thought I would share what little I found out:The 71R can take 2 computer interfaces(I called Icom for this info)
1- the EX-309
2-the UX-14
The EX-309 is a proprietary parallel interface that must plug into the demodulator number CT-17
The UX-14 is a standard serial interface that must plug into the demodulator number CT-17
So, what I think is that it takes 2 parts to control the R71A by computer.
I have looked all over the net ,and have only found for sale the following:
1 EX-309(new)for $99.95 but I can't find the CT-10 that goes with it.
1 CT-17(new)for$75.00 but I can't find the UX-14 that goes with it.
So good luck. If you get it done please let me know.

[One or more binary attachments are retained only in the source text.]

> --
> 73, Cecil, W6RCA http://people.delphi.com/CecilMoore

Well Cecil,

Here's how the logical thread goes:

1) CB radio was originally a licensed, controlled business band with
little illegal activity.

2) Minimization of license requirements and lax enforcement on CB by the
FCC led to the 1970's "bootlegger" boom.

3) Bootlegger boom led to chaos and removal of all license requirements
for CB. Once prerequisites were removed, anyone could get on CB.

4) Amateur radio currently requires a certain level of effort in order
to qualify for participation. Morse code requirements reduce (but not
eliminate) participation by those who are not serious about repecting
their transmitting privileges. This reduces the number of operators who
are not disciplined and rule-oriented.

5) Amateur radio has a a few "bad eggs" and LIDs, but does not have
nearly as much illegal activity as on CB.

6) Therefore, removal of difficult testing criteria will facilitate HF
licensing of the same demographic that abuses the CB band.

7) CB band abusers crave high power and more spectrum.

8) Consequently, "Eliminating Morse code testing will convert amateur radio into multi-band CB".

QED.

Curt Breneman

You forgot to take time into account. The FCC made the Morse code
test so long ago it's presently obsolete.

But that's exactly what Dick was worrying about - too many signals in
the data portion of the band. No SSB there at all (except for foreign).

But no examination was ever required for CB. So your whole argument
is invalid. It's the examination that will keep the ARS different
from the CBS. As long as there is a relevant examination, the ARS
cannot be compared to the CBS.

CBRambo@W6RCeicilA.net (CBRambo@W6RCeicilA.net) wrote:

Hi,

The efficiency issue may have to be address if one
or both of the following takes place.
1. The number of hams increases significantly.
2. The FCC removes spectrum space from our
allocations (2M, 70cm...).

Like using the lowest power to carry on
communications, one should use a mode that is
appropriate for the communications bandwidth.

As to reducing the number of license classes, my
real concern is that a simple entry level exam be
provided. Back 35+ years ago I started with a
Novice license. The test was about the upper
limit of what I could handle at the time. One
year later I passed the Technician. I now hold
an Advanced. At the minimum we should have a
MF/HF license and a VHF/UHF license plus an
entry level license.

The ITU requires testing for CW on MF/HF. When/if
the ITU changes, the US could remove that
requirement.

David DeLano
WA6TIM
delano@fc.hp.com
P.S. I use 160M to 70cm less 1.25M.

Hey all. I got my tech priveleges a couple months ago, mostly because I'm interested in wireless packet, so when I heard that Kenwood had released a dual-bander with a built in TNC my ears perked up a bit.

Can anyone here speak knowledgeably as to the radio's performance for both packet and voice? This radio sounds almost too good to be true, so I'm wondering what's wrong with it.

A good point Cecil, but peripheral to my core argument. I used the old CB band as an example of a relatively unpopulated service which at one time required a lot of "red tape" and justification for obtaining a license. If the ARS written tests were any sort of effective filtration mechanism, then I would have no problem with the elimination of mandatory CW testing. In actual fact, the often quoted 70% pass rate for VEC sessions is evidence that the selection process is not very effective. In fact, I suspect that this number would be a lot higher if the CW requirement were removed entirely. Would this be good for amateur radio? Well, maybe or maybe not. I am not alone in finding that all of the current theory/rules test elements can be easily passed after a week's worth of work with a study guide. CW proficiency, on the other hand, requires a real committment in time and energy. Getting up to 20wpm has been my elusive goal for quite a while now. Would I want to have the code requirements for Extra lowered? No. I want to earn it the traditional way. In any case, my logical progression was designed to illustrate what happens to a radio service when it becomes populated by people who don't feel a committment towards the integrity and future of their hobby.

If the only value in CW is fun then there is no reason for
Morse Code testing.

>often get attacked from the pro-code side for that. The only rational for
>the CW test in recent years is the weeder value. It keeps out the less than

The WEEDER value is frankly a violation of the rights of
people in the USA.

>serious. I really don't care if it's eliminated, in fact I'm sure it will be

I guess the wizards of 80M are serious hams upstanding hams
and lawabiding NoCoders are not serious, solely based on our views of
Morse Code. Yeah right any you say. If you don't care then why do
you seem to oppose it elimination? Frankly this seems are rather
strange postion to take.

>eventually. If the elimination of the code test does bring on the unwashed
>as many claim, at least they won't be bothering me on CW...

Well at least in making derogitory reamarks about a lot of
people, self inclduded you make make some claim that we are going to
somehow end the ability of the ARS to USE Morse Code. I suppose that
is something. BTW what many people. round I have seen about 4 who
claim that many people will suddenly be HF, wether or not they are
good or bad ops being another issue

I believe there are quite a few of conversations that you haven't
monitored, such as those utilizing CW, packet, RTTY, SSTV, pulse. It
appears you're basing your opinion only upon phone transmissions. Why
not upgrade, then explore the many other modes (besides phone) available
to us? 73, Jeff KH6OO

THis is STILL one of the best sig gens. SImple to use, and OUTSTANDING phase noise performance (it's not synthesized!). I'd love one, but can't afford it. Have to live with my Boonton 102e that cost me all of $10 at a hamfest. Could use a bottom cover for it though...

This is a curious statement, PR. In a previous article you wrote:

>> I've got a tech ticket, and would like to upgrade but...after SWL'ing
>>for 30 years I've heard the content and particpants of conversations
>>I monitor degrade to all new lows so there's not much of anyone I would
>>care to talk to.

So, you're a tech, but as you've written above, you're considering
getting on 3950 and jamming everything? Also, in your latter post
you complain about the content and particpants yet in your former
post you complain about not being able to hear the 3950 participants.
You're contradicting yourself, OM.

>You 3950 jammers are pathetic losers supporting a coward, liar, perjuror and
>adulterer and god knows what else. You've put yourself in the same group as
>Carville, Larry Flynt, Maxine Waters and Barney Fag. What a crew !

I take back my remarks from a previous post; don't upgrade. Remain a tech,
okay? 73, Jeff KH6OO

FS: ICOM 756 + XTRAS $1600.00 SHIPPED

Hello,

Thanks for taking the time to read my ad.

Due to a pending transplant I have the need to liquidate the extra newer transistorized equipment. I have an ICOM 756 HF TRANSCEIVER FOR SALE. Built in electronic keyer, 2-position antenna switch, 6 meters,vox,built in band scope, DSP and I'm a non-smoker....no sticky nicotine, scratches, hoof marks, beer or coffee rings.

* included is the SM 20 Matching Desk Mic with built in audio gain and tone control.
Foam wind sock, gets power through radio + frequency mods.
** also included is the IC17 PC controller interface.
*** Box, manuals, power cable, hand mic

SHIPPED TO YOU FOR $1600.00 *** FIRM *** You Pay C.O.D.

FOR MORE INFO:

....or you could have misinterpreted what was stated. If the morse exams are made easier (fill in the blanks, etc.) and the written tests are made easier, what has caused the dumbing-down of amateur radio? Something is ineffective. How about the FCC's abdication of its mandate to conduct testing? It would be in line with FCC abdication of responsibility for enforcement. The commission has pretty much told amateur radio, "You go handle it yourselves and don't bother us". At least the FCC still, for the moment, issues callsigns.

The last time I looked, physics didn't allow radio waves to recognize
state borders. As such, the constitutional authority of the US government
to regulate RF falls under the umbrella of interstate commerce.

Thanks for playing, Mark Morgan USA-ret-but-they-wont-let-him, Chemical
Corps, on the lam from former-marines and family members.

>So, Masa, are you getting out of Ham Radio?
>Hate to see you leave

Hi... thanx for your comment... yes... I am getting out of ham radio.
I already sold 202 and 242. I have extra 202 to go. 706 is to go as
well but I don't know if there will be any takers. I still have
ICOM-T2A for sale. I can give you a extra 10% discount from the
listed price if you wish to take it. Even though my prices are so
low, I just want to get rid of them as soon as I can. I will not be
paying fees for Industry Canada for my callsign... at least one of
them. VA2QRU is free to use by other hams in Quebec from April.
Surprising but reasonable, I received hundreds of e-mails for laptop
computers. about 10 times as much compared to CB or ham rigs I guess.

As you probably realized, I "almost" left rec.radio.amateur.* groups
as well. I will leave these newsgroups completely once I sell all of
my rigs. I am out. Ham radio "ages." Ages in technical point of
view. Also in generation point of view. I guess it's sad but that's
the way it works in today's society and we should all realize that.

Mark,

On this set of points I think that should agree to disagree, since we apparently look at life through different filters. To me, any barriers (either natural or government-generated) are challenges to be overcome. I'm sure that my way of thinking is colored somewhat by the fact that I was unable to get past the 13wpm CW requirement when I tried for General class the first time back in the early 70's. When I eventually made the cut, the feeling was wonderful. I've also made a career of jumping through hoops (College degree, Ph.D., Post-Doc, Academic appointment, promotion, tenure...etc), so they seem like a normal mode of advancement to me. I'm sure that I'm not alone in these feelings. I understand that your argument is against the fundamentals of ARS licensing, but in my opinion, the current structure works fine. The No-Code Technician level is already there for those who wish to be amateurs, but choose not to advance further in the radio arts. As pointed out earlier, legal CB and FRS are also viable alternative options for those who want to play with radio in a casual way. In my opinion, there should be one service, such as the HF ARS, which requires some dedication on the part of the participants.

Cecil:
Of course it was an accomplishment, and I see that your
time in ROTC was wasted. It was a TRAINING exercise designed
to teach you how to dig a quick foxhole that might just save
your life by a few seconds in combat, if you were able to
dig it fast enough.
Another training benefit was to cause you to follow
orders, even if you had no idea why the orders were given, a
vital part of military discipline. A little like requiring
ham radio operators to know Morse code so that they will
have training and experience in it as a unique
communications skill when they need something not covered by
technology.
Of course you'd prefer to have a hi-tech Laser digger and
a digital terminal, we know, but......

It was hazing, pure and simple. I saluted an a$$hole upperclassman with my left hand. Digging the hole and filling it up a number of times was simply a matter of one person exercising a power trip over another.

> A little like requiring
> ham radio operators to know Morse code ...

Yep, a salute to Real Hamï¿½s, like you. BTW, wouldn't you love to possess the power to outlaw left-handed CW like you love the power to force all HF hams to learn Morse code?

Why not go for the GROL? At least it'd be useful, and you'd have
something in hand for a career change. If I were paying tuition at
your school, I would demand no less than that the things you were
teaching me were relevant and useful in the long term. Life's too
short and school too expensive to do otherwise.

Take care,

What is this obsession with hard work for its own sake? Why not break
big rocks into little ones in your backyard?
At least Mommy FCC wouldn't have to make busy-work to keep those such
as yourself happy.

By effort's sake, I must not be a good reader, or a good BSCS
graduate, since I was naturally gifted in both those things, reading
12th-grade material when I was just 10. And breezing through CS
assignments--no cheating there, just talent.

By contrast, it's taken me 2 years of off-and-on study to go through
the GROL. I'll be happy to pass, but I have NO illusions that the
hard work makes me better. At least all the material I studied is
relevant, so I'm not complaining.

Take care,

Dave

The basis of the US government is that we possess certain unalienable rights, among these are life, liberty, and the pursuit of happiness. The government doesn't guarantee you bread and circuses, but it does say that it won't get in your way of finding the things that make you happy. That is a right, not a privilege.

We all know that our own rights end where others begin, and that is why we have laws. They specify the limits to what we can do. It is reasonable for the government to establish certain criteria to ensure that the radio spectrum remains a valuable resource to be shared by the citizenry. Basic knowledge of radio theory, safety and operating procedures are essential to operate on the ham bands, where we are allowed to use non-type accepted equipment that is not inspected by the government to ensure safety or freedom from out of band emissions.

The FCC oversteps its bounds when it requires the demonstration of skill which is not related to its basic concerns of safety and maintaining good operating practice. The need for Morse knowledge has fallen to roughly zero: it is a mode which is practiced purely for recreation. I fail to understand why anyone believes the FCC has the right to grant additional privileges based upon a skill with purely recreational value.

Was the feeling caused by
a) you did something that was hard, that you couldn't do before, and felt a great sense of personal accomplishment?
b) you got increased operating privileges?
c) you gained prestige (bragging rights)?

You sound like you'd answer a. That's fine, but the government isn't needed for that. The simple fact of the matter is that many people aren't very interested in Morse, yet they make pretty good hams. I am willing to let

them set their own set of goals, and evaluate their own progress.

> I've also made a career of jumping

> my opinion, the current structure works fine.

The current structure promotes the development of skill in a mode that the overwhelming majority of all hams use only rarely. The structure of the current licensing structure prevents (sometimes I think designed to prevent) adoption of new ideas and skills within the ARS.

> The No-Code Technician
> level is already there for those who wish to be amateurs, but choose not
> to advance further in the radio arts.

This is crap. Anyone who believes that one can judge someone's knowledge or skill level based upon what license class they hold is just bigoted. It is this equation that Extras are better than Advanced, and Advanced is better than General, and General is better than Novice, and Novice is better than Tech that really demonstrates that we judge hams only on their skill at Morse, and not at any other contributions or interests that they have in ham radio.

> As pointed out earlier, legal CB
> and FRS are also viable alternative options for those who want to play

If you can design a test that measures dedication, or one that can reject rulebreakers, I'll be first in line. Morse code is not such a test.

Source record: 153438
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap,sci.electronics.basics,sci.electronics.components,sci.electronics.design,sci.electronics.misc

I have the following mint condition, unused, high-quality equipment and
materials
to sell:

--1 HEATHKIT 3201A "DIGITAL TECHNIQUES COURSE"
(2 Volumes).

--1 HEATHKIT ET3700 "DIGITAL TRAINER,"
Includes a total of 4 insertion-type circuit breadboard cards
in a single, well laid-out package.
Also includes:
built-in +-5 and +-12v power supplies;
a variety of square wave TTL clock signal outputs at up to 100 khz;
a built-in DVM/frequency counter;
on/off led logic state indicators, buffered data switches; etc.

It's perfect for quick breadboarding of experimental circuits by means of
inserting component
leads and #10 wires in the little holes on the breadboard cards.

--1 KIT OF IC'S AND OTHER PARTS for doing the experiments in the course.

I bought these items in 1989 just before I became interested in computers
instead of electronics, so I never used them. I had previously taken
Heath's DC Electronics, AC Electronics, and Electronic Circuits"
courses, and found them unusually clear and easy to use, so I suspect this
course is also.

NOTE: This course teaches the fundamentals of digital circuit design
(e. g., AND, OR, and NAND gates; shift registers, clocking, Boolean
operations, etc).
These principles do not change, even if the hardware does.
The course does not teach computer programming, etc. so it should not be
out of date.
The accompanying ICs are TTL.
The course allows you to learn entirely on your own, by means of
"Programmed Learning".
The subject is broken down into manageable units, in each of which they
first tell you what
they are going to explain to you, they explain it, then present an
experiment demonstrating
it. There are periodic tests to help you synthesize what you've learned.

TOTAL COST NEW: $430
COST TO YOU $200, shipped.

Dave,

I completely agree that amateur radio is simply a hobby, and shouldn't
be confused with career accomplishments. I'm just taking the position
that it's good to be goal-oriented, even within recreational pastimes,
rather than assuming that the world owes you anything. On the other
topic - I assure you that the RPI curriculum is quite relevant - we
don't require CW proficiency for graduation....:-).

Send in five boxtops from your favorite breakfast cereal and get a free ham license.

ARRL is to blame for the poor state of amateur radio. The ARRL board should go and dig up Hiram Percy Maxim and apologize to him.

Perhaps a better wording here would have been "advance further in the amateur radio arts". Your reaction to this part of the post seems to be based on a dislike of hierarchical systems in general, since they all tend to rank one person over another for some reason. This is unavoidable in anything but a totally "flat" (idealized communist?) society. Since we know that human nature precludes an ideal implementation of a true classless society, what's the big deal about the ARS incentive licensing system? Why is it bigoted to recognize achievement in a hobby? I'm always trying to lower my golf score... Why can't this achievement be officially rewarded by the FCC through extra privileges? By the way, since there is no code increment between Novice and Tech+, nor between General and Advanced, the whole system is not based entirely on code speed.

While a quantitative measure of dedication is not generally available, I submit that it can be readily estimated by a linear combination of committment and diligence. Both CW and theory tests are designed with this in mind (in addition to the safety issues you outlined earlier). In my view, CW proficiency requires both a committment of time and the diligence to persevere. As a result, the CW test works pretty well as a measure of dedication.

I was about to post the same thing, but Cecil beat me to it. Some
newsreaders show the headers whether you want them or not, some have
the option of doing so, and some make it virtually impossible to find
or change them.

FWIW, if you're using something like rn or its variants, one of the
most useful killfile rules is one to delete all crossposted articles.
Really cuts down on the noise.

Cecil,

Your post seems to imply that there is an absolute scale of achievement. Why do you object to people being recognized for having varying degrees of accomplishment in different areas? A no-code tech with a PhD in EE may not have developed as many amateur-related skills as an Extra Class licensee with a high school diploma. What's wrong with recognizing this? What if Bill Gates got into amateur radio - would he automatically be "better" than everyone else just because he's wealthy? Would Einstein have been a better operator than everyone else simply because he was a physics whiz? No single thing in life ranks one person better than another on an absolute scale.

Dave,

My "obsession with effort" is based on the belief that many people
embrace mediocrity instead of pushing themselves to achieve greater
things. The popular media has helped to facilitate this phenomenon by
the glorification of leisure and of getting something for nothing
(i.e.the lottery...etc). People are encouraged to find the easiest way
out of any situation. In my opinion, this decay of the work ethic has
contributed to much of the "Generation X" malaise syndrome.

This is typical for amateur radio equipment remote control protocols.

The Icom CI-V protocol itself is a pretty good design but the implemented
commands are severely lacking. Usually there are many features in the
equipment that cannot be controlled via CI-V, for no apparent reason.

The Yaesu CAT protocol is a much worse protocol in itself, and suffers
from the same limitations.

It would be nice when such protocols would at least allow control of
all features available from the frontpanel, and then some things that
would be inconvenient to do from frontpanel buttons but would be practical
from a PC. Then, a PC remote control program could actually add some
value to a transceiver.

As it is now, the remote control is usually little more than a toy.
I have written a scanning application for the R-7100 that can do many
things that the receiver cannot do by itself, but it scans much slower
this way. Only because one cannot start/stop native scanning on the
receiver via CI-V.

I don't know about AOR, maybe I would buy their receiver if I knew that
the remote control protocol is more comprehensive than Icom's.

ICOM 2400a dual band mobile.
I got the mod to open the rx and tx on both bands but i need some clarification on a couple items before i do it myself.
The mod instructs me to clip 4 diodes total (2 for 2 meter and 2 for 440)
Then instructs me to install 2 chip diodes, this is where I need to know if theses two chip diodes are for the tx or rx ? If so then i need to know where I can purchase these chip diodes. The mod gives part #s.
Any help would be great.
Thanks

I don't think he was objecting as much as questioning. The Farnsworth
spacing does give most applicants more time to recognize and write down
the letters.

Farnsworth spacing is accepted by the FCC and most of the amateur
community and has probably helped many a ham pass the test and become
proficient in Morse code use. I think that calling a "gross error" is
an exxageration, Cecil -- one that, IMHO, really serves no purpose.

Riley Hollingsworth, The F.C.C. person in charge of the information and compliance divison enforcement division, was on 3894.5 at about 0:300 hrs UTC Wed, Jan 13th. He had some very interesting comments to make about the mess our amateur bands have become. I have been a ham for over ten years, but that was the first time I had ever heard an actual F.C.C. enforcement officer address the ham radio community over the air ways. I thought Mr. Hollingsworth expressed himself very well. His comments made a lot of sense to me. The crux of his comments had to do with the fact that if we dont get our acts together, we stand to loose our amateur hf frequencies. According to what mr. Hollingsworth had to say, certian entities are wanting to take over the hf frequencies and auction them off. He said if we do not clean up our act, that sooner or later we would end up loosing the frequencies because of pressure put on the F.C .C. He went on to say that if push comes to shove he would use enforcement action to clean up the bands, but he had much rather we just use a little common sense, and not be so quick to enter into confrontations. He encouraged any and all hams that have a complaint or comment to contact him at
rholling@fcc.gov
or phone 717-338-2502
I for one would like to thank Mr. Hollingsworth for his efforts, and encourage him to visit the bands more often.

FWIW from another new Tech -

I narrowed down what I wanted to the Icom W32 and Kenwood TH-G71A. I went with the Kenwood as I didn't feel the need for simultaneous access to both bands and the Kenwood sounded better to my ear and just felt better in my hand. Good luck shopping!

I really find this argument to be unfathomable. Since when did it require government regulation for you to feel good about your achievements?

You don't earn the right to use amateur radio from the government. The government regulates it purely to ensure that it remains a useful shared resource for the benefit of the citizenry. Toward that end, it seems reasonable that the government may wish you to have certain basic skills and knowledge sufficient to act courteously and without causing interference to others. Making you feel that your achievement is worth more is not part of the governments responsibility.

The ARRL already conveys awards for certain operating achievements (surprisingly few for technical achievement however). That is appropriate to their function as a private membership organization. It is not appropriate for the federal government to do so.

> On another note -- why is CW not relevant to amateur radio? It is a
> legacy and provides a historical connection with the birth of the radio

> reaped by converting amateur radio to multi-band CB?

It is multi-band CB for the most part already. As for fun, I think standing with dirty hands, pushing 20 lbs of glass back and forth for forty hours is fun. I don't think the federal government should require it to stare at the night sky however.

The license requirements were never more than trivial. You sent in your form, you got your license. Certainly FCC enforcement became non-existant, with the resulting increase in crazies.

> 3) Bootlegger boom led to chaos and removal of all license requirements
> for CB. Once prerequisites were removed, anyone could get on CB.

And for the most part, CB became more useful. You can get CB's new for less than $50, and they are decent utilitarian ways to communicate. I use one in my car to talk to other people when we have long drives.

Are there some asses? Sure. Are they a problem? Not very often.

> 4) Amateur radio currently requires a certain level of effort in order
> to qualify for participation. Morse code requirements reduce (but not
> eliminate) participation by those who are not serious about repecting
> their transmitting privileges. This reduces the number of operators who
> are not disciplined and rule-oriented.

This is, quite frankly, bullsh*t.

I take amateur radio, the responsibility to operate intelligently and courteously, and to train myself to become better very seriously. Morse simply doesn't convey the moral superiority that you would like to believe.

> 5) Amateur radio has a a few "bad eggs" and LIDs, but does not have
> nearly as much illegal activity as on CB.

Many reasons for that, some are:
a) CB equipment is cheaper and widely available
b) Amateurs have lots more spectrum to play in.
c) The ARS is somewhat successful in self-regulation.

None of this has anything to do with Morse testing.

> 6) Therefore, removal of difficult testing criteria will facilitate HF
> licensing of the same demographic that abuses the CB band.

> 7) CB band abusers crave high power and more spectrum.

If they craved it that much, they'd spend their hard earned welfare checks on
HF gear today. What makes you think someone who is breaking the law on the
CB bands isn't already doing it on HF? What's keeping them out? The rules?

>
> 8) Consequently, "Eliminating Morse code testing will convert amateur
> radio into multi-band CB".

Someone once said "Ham radio without CW = CB".

On my more skeptical days, I couldn't agree more.

Har de har har......Cecil parries, yet once more...OB, even someone as unfamilar with ham radio **on the air** as you clearly are should understand that when the crud gets thick enough ***NOTHING*** gets through unscathed. Not the digis, not CW, not SSB....and so then the power contest ratchets up. Do we really want or need that, with all the problems it brings?

(Yeah, I know...you have all these glowing theoretical praises for advanced digital thingies....so make it work, convince us with *action*, in an AMATEUR RADIO IMPLEMENTATION. We've seen what your words amount to.)

But....the simple fact remains, doesn't it?

Of the modes in common usage among ham radio operators worldwide, the mode that gets through when the others fail is the Radiotelegraph Code.

>
> If the bedlam of the 50s CW bands didn't bother you, I can't
> see any reason why anything should bother you now with more
> sophisticated filtering available.

A bunch of Novices all running <50 watts, eager as hell, learning all the while....I enjoyed it and for darn sure learned operating skills newcomers never experience today. Nothing I've seen since that time can quite compare with the 40 meter novice bedlam as experienced with a wide open BC455 and hundreds of other kid Novices on simultaneously. You

learned to select your "target" station by the tone of his CW note, zeroing in on that single signal, and just "tune out" all the others. Cranial filtering. Better than DSP, even.

Besides, we can get as
> many PSK31 QSOs in the bandwidth of one CW QSO as we can
> get CW QSOs in the bandwidth of one SSB QSO. Thus CW will
> be the bandwidth-hogging mode.

Now I know what you mean when you say you "love" CW. You think you've found a way to make it "better". Sorry. No sound card/PC will ever replace hand-keyed CW, even when a keyer is used.

> All you need to solve the problem is a Morse code to PSK31
> encoder/decoder.

WHAT problem???

You interface to the system in Morse code
> but the RF signaling takes advantage of the superior digital
> mode characteristics and we can get 5-10 QSOs into the same
> bandwidth as one CW QSO is in today.

It's another keyboard-video screen digital mode. Won't fly. No real CW fan would be interested. Might as well work packet, RTTY, PACTOR etc.

You STILL haven't learned that it's the PERSONAL INVOLVEMENT in CW that matters, and is what makes it what it is - not some sort of technology. Anyone can a work a technology based communications system. It takes personal skill, used by your own hands, ears and brain to work CW.

Indeed. Rewarding effort for the sake of effort is just a subsidy for
stupidity. Stupid people like to see effort rewarded, because effort is the
one thing they can demonstrate.

I presume that you are referring to Q signals. Which of course, you can send
just as easily in RTTY or PSK31 as you can via Morse. With better performance
against AWGN. In less bandwidth. And faster too.

Does your transmitter have a transistor in it? Can you build a transistor?
That level of functionality is already beyond your ability to manufacture, so
I see no reason not to just wave the red flag and use the bounty which
consumer electronics has bestowed upon is in the form of cheap computing
power.

>While the government may or may not have the moral authority to grant or

The moral authority of the FCC is not the question (as an
aside does anybody in Wash DC have that much moral authgority these
days?) it is the issue of legal authority. No provision of the
Constitution gives the the Government the right to regulate RF
directly (after all the founding fathers never envisioned radio) There
are two source of inderect power, the neccsary and proper clause and
the cleuase that stiplaates that the Constitution AND any treaties
entered into are the supreme law of the land. In addition the 10th
amendment gauantees all other power to the states and the people.
This makes the ITU lang 25.5 I believe relavant, it provides that a
basic (and ill difined as the ARRL and others have so correctly
observed) allowage for some minimal morse testing, and that is the
limit of the FCC's power on the subject. (more coments on the FCC's
power in a moment)

>deny access to the electromagnetic spectrum (insert freebander debate
>here...), the FCC has generated a set of licensing benchmarks through

This is not a "freebander" issue the NoCoder agree that the
Gov through the FCC has power and respoiblity to regulate access to
RF, but deny that is has the power to do so, without justifies the
limits it seeks to impose. IOW it may impose requirement stipulated
in the ITU treaty, (subject to the intertation of that treaty) and
those measure that are Necceasy and proper to the orderly use of that
Spectrum. When Code was widely used to say adivise an Ham station it
had strayed in to Military spectrum, it was indeed proper to require
that Hams knew code (even without the ITU provisions) but since nobody
uses Morse Code for that purpose anymore that funtion is no longer
proper.

>which many amateurs have passed ("Incentive Licensing"...etc). As such,

How does incentive licening meet the burden of being neccary
and proper to the Government interests? If it does not do so, nor is
stipulated to in the ITU treaty, then the Govb lacks the
Constitutional mandate to impose it, even if it could be proven to

good for Ham radio

Wrong. Included in each CB set sold was a "license application" and a booklet of the FCC-issued CB rules. As a part of the application, you were required to sign a statement that "I have read and understand the rules, and agree to abide by them". THE RULES WERE GIVEN, worded EXACTLY. Just like the question pools in ham radio testing today.

That's just about as much of a test as is used in ham radio today.

Congratulations David!
Keep in mind that my advice is going to be worth everything you paid for it 8-} Take a look at where the bulk of the repeaters in your area are set up, and don't forget to check into which are open and closed. If you find a lot open up around 440 it would be of benefit to have that band, likewise for 6m. Most areas (that I have been to) have a decent amount of open 2m repeaters, don't see a lot of 6m repeaters though and many of the 440 repeaters seem to be private (I live in LA and travel often to southwest Utah and the Dallas, TX area so that is my frame of reference). So you would ideally select your bands of coverage around that (and/or if you have friends who are already hams - ask which repeaters they frequent and buy to assure coverage on that/those band(s)).

However, in reality the difference in cost between one dual bander and a single bander now and another later for that band you did not know you would operate on is significant. If you have a good number of open 6m machines go for the tri-bander. Otherwise I would recommend a 2m/440 combination. As to which particular model, that's a toughie - it is kind of like asking which car is best or which stereo is best. I may get flamed for this, but the major manufacturers are putting out decent gear. Each has their own characteristic in terms of audio quality (both receive and transmit), battery consumption (all getting better in that regard), programming steps and ergonomic factors. Like automobiles, most every ham can tell you a horror story about a manufacturer that another ham praises for the good product/service he or she received from that company.

Some things to keep in mind when you are shopping:
1) audio quality - listen to each and gauge for your taste
2) ask to see the manual and try to quickly set up a

frequency or two in each one you are considering, note
which one(s) seem intuitive to you, or the most usable
3) look at such things as battery costs (you will want more
than one, though I feel the best second battery is a
case that accepts 'AA' batteries -always available) and
if non-OEM manufacturers can supply them (typically
the non-OEM batteries are less expensive)
4) dual band versus one at a time; the Yaesu FT-50, Icom
T-7 and Kenwood G71 have two bands of coverage, only one
at a time. That may or may not be a concern to you. For
what it is worth, to me it is not of consequence; my
first HT did 2 bands at the same time and I seldom used
it and never really needed it -your mileage may vary.
5) your budget.

I realize that I took a lot of space and did not give you a definitive
answer - that is because their is none. Just hoping that I passed
along some useful tips in how to select what will best suit your
needs.

73 and welcome to the hobby,
Howard KE6MAK (hmkarse@earthlink.net)

The mod you are refering to works on my '50, but it has a 6M serial #.

851. IC-Q7 Software

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-13 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <369C4D5D.A6831C58@t-online.de>
Source record: 153562

In the IC-Q7 Service Manual in Section 5 is described the
complete Adjustments procedure. In order to perform any
adjustment you need to put the IC-Q7 into Adjustment mode.

This is done (as described on page 5-1) using the ICOM
CLONE/Adjustment Software that is setting the IC-Q7 into
a adjustment mode.

This Software is NOT supplied with the Service manual
so it is impossible to perform any adjustment.

I have contacted ICOM and some people releted with ICOM
and tryed to get some information.

The Software is for internal use only and is not
for use outside the company.

This is not understandable for me, the service manual
is practicly useless without the possibility to set
the IC-Q7 into the adjustment mode.

If someone has this Software (or access to it):

I need only the command to put the IC-Q7 into
the adjustment mode, it is something like
FE FE E6 00 00 FD or something like that (I Guess)
I am NOT asking for some copyrighted Software,
I need only the HEX command, this can be easyly
found by monitoring the datastream of the rs232
port. If someone has the software and can not
find the command, please send me the Software
so I could do it.

I WILL DESTROY (DELETE) THE SOFTWARE WITHIN
15 MINUTES, I WILL USE IT ONLY TO MONITOR
THE COMMAND TO SET THE IC-Q7 IN ADJ. MODE

I am not asking for some MARS/CAP mode or
wide RX/TX or anything ilegal, I just want to
adjust my IC-Q7.

So PLEASE ...

Yep, I dead against using farnworth spacing on the code tests. It's
great for learning and getting prepared to jump to higher speeds. BUT,
I'm very strongly am against it for tests. #1 , I think it's illegal as
like you say it's not the proper code test specified by the fcc for a
certain class. It's a modification. A 5 wpm test should have 5 wpm
characters, and 5 wpm spacing. No other combo's pass the test as far as
I'm concerned.
It's like taking a written question and changing to suit my needs or
others. MK

Let me give you an example of "self policing" in action. ARRL recently learned of wireless modem jacks radiating harmful interference on the low end of 80 meters. We contacted the manufacturer and involved cable company, explained the problem, discussed solutions, and then publicized those solutions to the amateur community. (see http://www.arrl.org/tis/info/rfiteljx.html/) This is self policing and, in this case, it worked. We have used similar "voluntary" techniques to resolve cable leaks, electrical noise, etc.

This process will probably work about 80% of the time, to one degree or another. From THERE, we need the FCC.

A similar process could also work with the amateur community. Most hams are truly self policing -- they conduct themselves legally at all times. In other cases, the Official Observer program helps hams by identifying rules violations and calling them to the hams intention. WHen I had key clicks from my old DX-100, the OO notices finally got me to retire the rig. In other cases of deliberate rules violations, the Amateur Auxiliary to the FCC helps by developing evidence of consistent deliberate rules violations. In some cases, it helps. Even the peer pressure that hams exert on others is a form of self policing and the amateur service is better for it.

In cases where it doesn't work, only the FCC can help. In years past, they were not able to help much, which significantly lessened the impace of self policing. I am seeing some encouraging signs; the FCC is moving on rules violations in a number of services, they stood at the ready during my work with the wireless modem jacks and I think we will have, to one degree or another, the clout behind the voluntary solutions that will help make them happen.

I disagree, too, that "all" we have is clueless idiots. I bet that there aren't more than a few hundred, out of a few hundred thousand hams, who are doing such things on the air. The percentage of hams who follow the rules is much higher than the percentage of drivers who follow the rules of the road, and, in spite of some serious problems, I

am quite proud of the conduct of our Service.

But it all ultimately starts and stops with the voluntary conduct of our citizens; if everyone only stops for stop signs only when they think the cops are looking, most stop signs will not see many stops.

Please correct me if I'm wrong, but I have been under the impression
that Farnsworth spacing consists of ~20wpm Morse characters presented at
5, 13 or 20wpm throughput rates. Why is this a bad thing? Why do you
say that it's not real CW and shouldn't be used for tests?

A local ham in Arizona has likewise been sent a "final notice" letter
from Riley. If he persists, the letter states that he will be given an
NAL. The last major case here, Tim Hoffman was assessed $6,000 NAL, and
it WAS enforced and collected by the local Justice Dept.

Looks like the FCC is serious now....it's about time./

Sam, you may want to try a place called Bill's 2 Way, I have never used their services, so I don't know if they are any good or not, but I believe they do work on 2950. I have been considering buying a 2950 myself, but after reading your letter I believe I won't.

Nope, seems fine. I don't have any experience with other HTs to make a relative determination, but it hasn't gotten more than slightly warm - just enough to notice really. Haven't tried an external supply yet, which is supposed to bring the output to 6 watts.

Your question doesn't make sense. You are, in effect, asking if you can
power the radio from a port in the set that is for an outside power source.
Sounds like the answer is yes, unless I'm reading your post incorrectly.

Rob,

Then I think you made a good choice. I have the W32A and its metal case becomes too hot to hold after an extended QSO at the 5 watt level, particularly if it involves several 30-second+ transmissions. This is not dependent upon the antenna in use. The same effect is observed with a well-matched external gain antenna as with a rubber duckie. The only escape was to connect a speaker mike. The dual band monitor is nice, though.

Some of the talk that I've heard on 75m goes beyond "bad words".
Threatening to break every bone in another ham's body isn't protected
speech, it is assault. Last I heard, voicing one's opinions in that
manner is illegal not only on ham radio but in the rest of US society.

Agreed, it seems to me after all these years of listening though, that the
Authorities have a LOT to answer for because their lack of ability(for
whatever reason) to trace the offenders and remove licenses !

Ham and CB radio are slowly starting to look the same to me and will I think
if both the serious users and the Authorities do not take the problems more
seriously and start getting rid of the offenders .

just my 2 pence worth.

: Cecil:

: Of course it was an accomplishment, and I see that your
: time in ROTC was wasted. It was a TRAINING exercise designed
: to teach you how to dig a quick foxhole that might just save
: your life by a few seconds in combat, if you were able to
: dig it fast enough.

Once you dig a hole AND fill it back in it is a lot quicker to get the dirt
out after that. So you really weren't getting much -more- experience in
"digging" faster. Cecil you piker, A few of us had to dig in a *TANK*!!
That took all day. Almost killed us.

: Another training benefit was to cause you to follow
: orders, even if you had no idea why the orders were given, a
: vital part of military discipline.

Sort of like having to learn code hu?

; A little like requiring
: ham radio operators to know Morse code so that they will
: have training and experience in it as a unique
: communications skill when they need something not covered by
: technology.

Geee, you mean that CW doesn't USE "technology"? WOW!

: Of course you'd prefer to have a hi-tech Laser digger and
: a digital terminal, we know, but......

Or even just fire the cannon of the tank into the ground. That would make
a hole real quick! But that requires the guys in charge to think! "But we
always DIG them in, we don't fire no cannon. - THIS IS WAR!"

PTon La <juasaa@bigmail.com> ranted:

>Because the ARRL and it's fanatical, brainwashed, near CW
>cult members want to keep ham radio in the technological dark ages
>by goose-stepping to "dit and dah", by and to retain an obsolete mode
>of communications and thus keep their version of ham radio's *Berlin Wall*

It was the ARRL that asked that a code-free V/UHF license be created.

>I *LOOK FORWARD* to the day the next chunk of their precious ham bands
>are lopped off with the FCC's RF spectrum butcher's knife, and these retro-
>grade CW diehards scream and piss and moan like a bunch of stuck pigs!

If any spectrum is lost, it will not be because of code. After all, the
only bands that are in danger are those in the V/UHF region. There is no
code test required in order to operate up there.

HF (where code testing is required) is in no danger at all; in fact,
consideration is being given at this moment to award hams with more
(not less) MF/HF frequencies.

>I really look forward to that day, just for the satisfaction of rubbing their collective
>CW-noses *into it* with relish and vigor!! (better listen to Wayne Green - he makes
>more sense in his editorials than all of Newington combined in a month of Sunday's)

Do hold your breath, okay?

>Don't give them any ideas SDA - they might require that all hams be proficient
>in starting a hand-crank'd Ford

If hand-cranked cars were the second-most used mode of transportation,
then it might be wise for drivers to be proficient in knowing how to
start them. (CW *is* the second-most used mode on HF; I bet that gives
you heartburn!)

>or knowing what a 6SN7 is...

Gee, a lot of the second-hand gear you see for sale does contain tubes -
you apparently believe that a person shouldn't have to know how their
radio works. Scary!

>tech license or a code waiver.

Code is relevant for HF privileges because it's the second-most used mode on HF (an informal count on any band will show that the number of CW QSOs is about the same as the number of SSB QSOs).

Very little code is used above 50 MHz, so no need for it to be required in order to operate up there. The ITU agrees fully with this. Also, it was (incorrectly) believed that offering a code-free V/UHF license would populate the upper spectrum with engineers and thus help keep it off the FCC's chopping block. We're in no danger of losing HF spectrum, so need to make code testing exceptional for the lower frequencies. 73, Jeff KH6OO

Jeffrey Herman wrote:

:>An arbitrary requirement is irrelevant irrespective of the discipline.

:Why do you feel knowledge of code for HF privileges is "arbitrary"?

Don't change my words, Jeffrey, I didn't say knowledge of code is arbitrary. I said the requirement is arbitrary.

In order for me to get any more privileges in the HF bands, such as most of the bands, for a start along with all the image modes and most of the phone modes (including MCW!!!???) I am REQUIRED to demostrate Telegraphy skills at speed. That is an arbitrary (which means not governed by principle; it's capricious, imperious, tyrannical, dictatorial, despotic, overbearing, domineering, peremptory) requirement.

Arbitrary power is most easily established on the ruins of liberty abused to licentiousness.

George Washington

That's because the FCC assumes most people know how to speak. In your
case, you're probably lucky they don't have such a requirement.

>If there is no

It has already been demonstrated that the Novice Examination contains all
the electronics and RF theory required in order to operate an HF station;
Thus, the Tech+, General, Advanced, and Extra written exams are all
"arbitrary".

> In is not incorrect, indeed if not for the those techs that
>you dismiss the ARS would have suffered much larger percentage losses
>then it did this year, which would make our spectrum just that much

Please detail the achievements of engineer no-code techs. What new
technologies have they contributed to the amateur service over the past 8
years?

> I'll note that at least you don't the NoCode techs to
>successfull had to suceed in keeping all of our specturm of the block,

>try to grab a lot of our specturm

We have every reason to believe that the codeless tech license did little
to contribute to the "rapid growth" of amateur radio in the 1990's. It has
been shown that the "rapid growth" has more to do with the conversion to a
10-year license term. Yes, the codeless tech license did afford
opportunity to some people who would otherwise not have gotten their ham
licenses. But, to claim that they are the "saviours" of ham radio is
laughable.

> Gee I guess you have not been reading the knowlegble word

Nothing you post is understandable, and thus is not knowledgable.

Mark,

Got to my webpage and on the lefthand side frame scroll down to links and click on the FT-847 Bulletin Board where you can find lots of info on this radio. I have heard different reports about the mod some of which say you will lose the crossband repeat function. But check out the messages yourself as there might be something there worth using.

http://www.erols.com/catlink/847.htm

Good luck

AMEN Tom glad you posted this. I for another think that some need to get on the straight and narrow. I was listening on 160 the other night to a roundtable discussion with about 8 or 10 hams just having a nice clean conversation amongst themselves, and all of a sudden one came in and gave out his call sign and the rest followed. I latter on found that before the roundtable starts one is designated as the time watcher and when it is time to ID he does and the rest follow. I have never herd this before and I have been hamming since the 70's.

It would be discusting to loose the HAM bands over some discusting activity that goes on.

Riley Hollingsworth, The F.C.C. person in charge of the information and compliance divison enforcement division, was on 3894.5 at about 0:300 hrs UTC Wed, Jan 13th. He had some very interesting comments to make about the mess our amateur bands have become. I have been a ham for over ten years, but that was the first time I had ever heard an actual F.C.C. enforcement officer address the ham radio community over the air ways. I thought Mr. Hollingsworth expressed himself very well. His comments made a lot of sense to me. The crux of his comments had to do with the fact that if we dont get our acts together, we stand to loose our amateur hf frequencies. According to what mr. Hollingsworth had to say, certian entities are wanting to take over the hf frequencies and auction them off. He said if we do not clean up our act, that sooner or later we would end up loosing the frequencies because of pressure put on the F.C .C. He went on to say that if push comes to shove he would use enforcement action to clean up the bands, but he had much rather we just use a little common sense, and not be so quick to enter into confrontations. He encouraged any and all hams that have a complaint or comment to contact him at
rholling@fcc.gov
or phone 717-338-2502
I for one would like to thank Mr. Hollingsworth for his efforts, and encourage him to visit the bands more often.

No, you just assume that everyone looks down on your
seriously disinterested pal Doc W. What we DO say is if he
is interested in Ham Radio which is a separate entity from
electronics engineering of anyh kind, all he has to do is
qualify just as everyone else does. The fact that he chooses
to not do so merely proved that he *isn't* that interested.
No other position has been put forth. The choice is strictly
his and his alone.

You did an awful job of editing my comment, Cec. Here's what I
wrote: "Really? Please provide proof, Cec. The HF riff-raff
probably don't number more than a few hundred, which amounts
to a fraction of a percent of all HF-licensed operators."

Then after editing that out you go and mention the HF riff-raff
("3950")!

Even if they amounted to 1% (can you come up with 300 operators
hanging out on 3950?) you still can't conclude that "Morse code
testing has proven to be extremely ineffective."

It's actually a very good method for strengthening the back muscles,
Cec. It's also aerobic (note that many winter heart attack victims
are shoveling snow from their drive-way when they're stricken).
PT is not hazing.

During the first week of Basic Training, we were ordered to get down and
do 20 push-ups at the slightest infraction. After a week, the order was
increased to 30 push-ups, then 40. Was that hazing? Not in the slightest.
They were short strength-building sessions done several times per day,
disguised as "punishment" for some imagined infraction (such as an "Irish
Pennant"). Even now, a couple decades later, I'll do a set push-ups
several times per day.

I'd say your ROTC training really paid off, Cecil, for even to this day
you continue to dig yourself into holes here on the newsgroup... =:o

de KO6JQ,
On January 6th 1997 Bought a Ranger 2950 nib
sent it to RCI in San Diago for replacement of lamps
Sept 24th 1996 and tune up (off Frequency)
Got it Back C O D on Jan 2nd 1997 cost 95 bucks
and change, it didn't work.
Sent it back Jan 3rd 1997 they lost it in their building
Finaly after 18 long Distance phone Calls they found it
and returned it for another 77 bucks and change.
It still doesn't work they wont stand behind either of their repairs I
guess it was my fault that they lost it in their warehouse!
does anybody out there Know where I can get it repaired I've got 259.95+
95.00 1st repair bill
77.00 2nd Repair bill
75.00 in shipping charges

506.95 plus change so far
all I wanted was a cheap way to do 2 meter all mode
I could have bought a kenwood at tis price

There'd be the fact that the Advanced class exam is more difficult than
the General and the Extra Class exam is more difficult than the Advanced
and I could point out that there is no additional morse exam between
General and Advanced.

Your talk of "bigotry" and of the FCC "overstepping its bounds" is so
much politically-correct jive.

I found out about Riley's call on 3894.5 from a local ham on 2 meters who was listening here in Raleigh to the entire discussion. He was busy on the telephone at 10:00 PM trying to get people out of bed to go listen to his discussion. Frankly, I wish Riley would get on earlier in the evening, like at 8:00 PM, advertise he's going to be on, and hold a nice on-the-air discussion. I'd be very happy to participate.

Some comments:

1. I heard second hand that he was going after a number of people, and that they only need to disrupt things one more time before they were getting nailed. I certainly hope that's the case, since in this period between when the warning letters went out to now, the situation has become worse since these folks see that they ARE getting away with things. Some, like Dan, W4NTI and Walter, W2YEE have toned it down significantly (I haven't heard Walter either drunk OR playing that German marching music in over 10 days now and counting), it only takes one snowball to start a snowball fight. Let's keep the momentum!

2. I also heard second hand that the FCC and Riley (one and the same?) know the whereabouts of Captain Truth, aka Captain Fruitcake, and that he will be prosecuted too. About time!! In addition, another ham in Indiana was "in the dock" as well, and I assume that's Mr. KGI. Ditto.

3. Rather than issuing NALs and then not either collecting on them via the US Marshal's Office nor confiscating the equipment nor prosecuting criminally nor not renewing their tickets (yes, I know that's a double negative), let's see some real action. I've been a licensed ham for just over 20 years now, and as a teenager, I held the FCC in extremely high regard. I for one would like to continue this feeling into the next century. If it unfortunately comes to enforcement, PLEASE be swift, fair, and complete. I see previous enforcement actions akin to the Johnson Administration's Vietnam policy - LBJ never allowed enough forces to complete the job, and allowed his own defense officials BS him into believing we could win the war with minimal involvement.

4. I also heard there were "last warning" letters sent out on the 12th. As a taxpayer and self appointed old-fart, I would hope that enforcement would occur on no later than the last day of this month; that's at least 30 days warning.

5. The comments about HF being lotteried off doesn't make any sense. As a person who is on the rolls of a ITU microwave advisory committee, I see a lot of international wants and needs for that spectrum. I haven't heard much at all about any needs for HF, aside from broadcasters. I doubt they

would have enough money to make a significant lobby for the bands in any case. Having a few loose cannons on our bands does not warrant giving them up to lotteries; instead, the FCC pushed enforcement onto the ham community as a cost-cutting measure which was doomed from the beginning - see Comment #3. FCC, please do your job now, get it over with, and it will cost you less money in the long run. How much has the Top 10 cost all of us monetarily as well as in damaged reputation? Want to make some money? Collect those NALs!! The FCC sure made a ton of money a few years ago when they started spot commercial tower inspections; if your tower was in need of paint, you were ticketed and fined (I believe) $1,000. One ham has about 10 and a half towers that they could collect on at one location alone - that would cut down on travel expenses, too!

6. I also heard second hand that Riley was awarded a StumpJumper number last night.

7. Last comment - this has NOTHING to do with Herb S. Everyone is liable for their own actions.

I would love to see some enforcement of FCC rules and regs. We claim to be "self-policing" but obviously, we are not. Just as people stop and stare at a serious car crash or a building fire, most of us who come across an on-air trash session in progress, we have to stop and listen. The FCC should be doing some policing...if only they could help with things that are damaging our hobby that are not necessarily illegal, like not following VHF/UHF band-plans, ignoring the "newbie" trying to make that 1st contact, people not listening for a decent period before calling CQ, not knowing what to say beyond "ur 599 wx here...rig here is...antenna here is...too much QSB here...73 and thanks for the nice QSO, and just being rude (for which there is no penalty). This list goes on and on and we all know it and can easily add more to it. And I think to myself, what a wonderful world.

I am curious as to why you would want a vhf/uhf bean with that many
elements?

I did some, antenna, experimentation several years ago and found 4 elemets
is actually the maximum number of elements you really need.

I have a CP-100 that I'd like to put the RS-232 interface into.
Any body have ant info for it ?
schematic, parts list, manual for the CP-100 ?

I'm currently running a CP-1 with the 232 and using BMKMULTY software.

thanks,

Rich N2RY

Tom, I completely agree. I think that ham policing of our own bands is pretty worthless. It's like having an elementary school safety patrol kid (remember those orange vests?) monitor the road out in front of the school for speeders.

What if we told folks that we couldn't afford patrol cars or police to monitor the roads for speeders, and it was up to us as motorists to do our own policing? That's what our FCC has done.

As far as a real deterrent, how about Riley showing up on 20m and 75m nightly for about a month? It would be sort of like the cop walking the beat. Amazing how few petty crimes are committed when everyone knows the local footcop is walking his beat. I'd like to see Captain Fruitcake tell Riley that he's going to "shut him down".

Excuse me, but you've thoroughly confused me. 4 elements is the
maximum number you need for what? That's probably around 8 to 9 db of
gain, with a beamwidth at the half power points of about 30 degrees or
so. F/B ratio maybe as high as 18 to 22 db, depending on the
construction of the antenna.

I can think of dozens of applications where considerably more gain,
narrower beamwidth and higher F/B ratios at UHF/VHF would be
desirable, among them weak signal, EME, and troposcatter to name a
few.

There isn't any restriction that I know of as far as retakes go.
Generally, though, most clubs test once per month. Several folks I
know simply travelled to a different club for testing, and so retook
the exam after a week's delay.

>What about classes of some sort?

Some ham clubs do offer classes, usually through the local Adult
Education thing. Check with any club in your area (found by using the
ARRL url above.

>AND... Most scanners (or any that I've thought about buying) cover from
>30mhz-1300mhz or so.. Why are there no transceivers (however that's spelled)
>capable of all the ham-bands? Or have I just not been looking in the right
>places?

Um...technically it is much simpler to build a receiver (which doesn't
need FCC Type Acceptance) which covers a huge range of frequencies
than it is to build a transmitter which does the same. You can get
transceivers that cover 160 meters through 2 meters and possibly more.
I dunno. I run with a 6 year old 160-10 meter rig I bought used, and a
little two meter transceiver in the car.

If you have any other questions I can help you with please feel free
to e-mail me.

As far as I know, antennas are used in 100% of HF QSOs. Yet antennas are not the subject of a pass/fail element. Why is a proficiency in an inefficient, slow and recreational physical skill judged more important than an important topic like antennas?

Get off of the repeaters and start working simplex. There is PLENTY to do on 2m & 70cm. Packet, code, SSTV, satellite, etc. Upgrade and get on the HF bands. Some of you people have a lot of jammer problems it seems. How about going after them?

I don't even understand how self-policing could possibly work. If someone's
a trouble maker on HF, WE can't fine him, or punish him in any way. We
can't go down to his house and beat him up. The government has all the power,
not individual operators. That's what I don't get.

All we have are clueless idiots who jam people
they don't like, and that just adds to the problem.

Gotta be the saddest day in amateur radio history. To have the FCC's Riley Hollingsworth, kissing up to the most vile and disgusting ham in the hobbies history. Just shows you how corrupt and dishonest the system has become.

Seriously thinking of turning my license in and quiting the hobby. I don't want to participate in a hobby enforced by a bunch of hypocrites.

I no longer encourage people to become hams. Instead, I play recordings of "Pork Butt" and tell them this is the cesspool ham radio has become. This usually turns them off. I love to think of the potential revenue the ARRL is losing because of the "customers" I'm turning away from the League, because they are repulsed by the sick behavior of WB2OTK. Of course, I bring up the question of whether they want their children or grandchildren to hear this type of sewage as uttered by Richard Whiten.

> find another frequency to use, right?

Nope, if I am operating RTTY and hear someone start using CW, I will probably just ignore him since I don't want to interrupt my RTTY reception to tell him the frequency is in use. I've been in the QSO for many minutes already. He may think I'm interferring with him when I start transmitting on top of his new QSO, but it is really he who is interferring.

Yes it is normally an FCC responsibility.
However, considering what has been happening on the air waves, don't you
think it is about time something happened?
I am all for freedom of speech etc but where do you draw the line?
Where does freedom of speech end and verbal abuse begin?

Freedom of Speach is so overly missused, by people who want to justify
the use of crude and fowl (foul) language. What it was intended for, was
to give citizens the right to speak out about the Government, without fear
of being persicuted. It has absolutely NOTHING to do with the TYPE of
language (eg - 4 letter "F" words). In Canada, beleive it or not, but the
Criminal Code of Canada states that it is an offence to use profanity in
a public place. Laws of Communication, in both the USA and Canada
state that it is an offense to us profanity while using the radio.

So - If you still insist upon using profanity in on the air, be ready to
suffer
the consequences.

You may have been just joking, Curt, but there actually is some basis to what you suggest - That Hams should be rewarded by the community, not chastised for setting up an antenna so that they may operate. After all of the lives saved by Hams over the years, and all of the emergencies and disasters they have helped to handle, Hams should indeed receive some recognition and respect for what they do.

For Sale:

Fluke 8020A 4 1/2 digit DVM. (still the most accurate handheld they make) Measures AC & DC volts, amps (2 amps max); ohms, frequency (to about 200Khz, I believe), and db.
VG condition, case, leads, no manual. $200 OBO.

Valhalla Scientific 2010 digital power analyzer. Measures volts, amps, power from DC to 40Khz. Always shows true rms watts + either volts or amps. Will handle 300V and 20A max to 6000watts max from DC to 10KHz. (2 amps max from 10Khz-20Khz for 600watts max) Calibration verified Sept 97 by lab. Primarily intended for measuring true rms power usage on AC equipment. Great for finding out what the various things plugged into the wall Really use in the way of power. Have manual and homebrew AC test jig. $600 OBO.

Dear MK,

That seems like a good point, but I suppose that it could work both ways. Since any code copy above ~10wpm seems to be done on the sound of the characters rather than by analysis ("...let's see, three dots is an 's'...etc"), the wide spacing between characters may provide a better chance for some people to reconsider and/or write down the characters without having to "copy behind". On the other hand, 13wpm at a standard rate leaves much less time between the end of one character and the beginning of another, making copy somewhat more difficult for some people. I would imagine that it all works out pretty evenly in the end.

Joe, I work on these radios (and own one). There is a common filter used in both receive and transmit (one filter per band), which is diode switched. You may have lost a diode. The radio uses very small surface-mount components, which makes it difficult to locate, test and replace parts. If I can help, please ask. Stuart K6YAZ

Additionally, people and positions do DESERVE respect
based solely on the fact that they exist. I demand that
my children RESPECT all their teachers. Those teachers
need do NOTHING to earn that respect, they deserve it from
the first minute students enter their classroom.

That doesn't mean that someone who should have respect
automatically can't do things to loose that respect. Just
look to the Oval office for that situation.

Cheers,
Bill K2UNK

>that up somewhere.

Only half right Dick. The original need for CW skills was
so that hams could be TOLD via a morse code message
that they were interfering. That is NOT needed anymore
because of the obvious advances in technology, separation
of services by band segments, etc. There is NO
need for interferece communication by CW today
at all. If I listen to a frequency and it is clearm then
I am not interfering to the best of my knowledge.

Cheers,
Bill K2UNK

949. ADI Supports Repeater Owners

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-15 00:00:00 UTC
From: ko6ux@adi-radio.com
Message-ID: <77o7jbrso1@nnrp1.dejanews.com>
Source record: 153333

ADI / PREMIER Communications Vows Support Owners of
222 MHz and 6 Meter Repeaters

13 January 1998 * Brea, CA

ADI / PREMIER Communications announced a program today to help provide financial support to owners of amateur repeaters on the 222 MHz and 6 Meter ham bands. PREMIER has pledged to support local repeater owners with $5 toward the cost of maintaining their machines for each PR-52 Six Meter handheld or PR-222 1.35 Meter handheld sold between 1/13/99 and 3/31/99.

"We are deeply concerned about growth within the amateur service, and especially the lack of growth on bands like 220 MHz and 6 Meters," said Jim Newcomb, N7MBA, PREMIER's Vice President of Sales. "Activity levels on these bands have declined because of the lack of available, reasonably priced equipment."

Newcomb feels that the new PR-222 and PR-52 handhelds that PREMIER is offering finally give amateurs a source for low cost, high quality equipment. And, he says, his company not only wants to help encourage more hams to use these often overlooked bands, but also would like to give something back to the owners who maintain repeater stations on these bands.

If you purchase a PR-222 or PR-52 handheld during this period, and would like to make sure that the appropriate money goes to support your local repeater owner, simply mail a copy of your sales receipt to PREMIER at:

PREMIER Communications
480 Apollo St., #E
Brea, CA 92821

Remember to include a note with the callsign of the repeater owner that you would like to support and the frequency and location of the repeater.

Newcomb also says that ADI / PREMIER will soon be unveiling a new 220 MHz mobile radio, the first new mobile unit for the 1.35 Meter band introduced by any manufacturer in several years. That radio, dubbed the AR-247, will offer advanced features such as 80 memories, 30 watts out, CTCSS and DCS encode/decode/tone scan, and will be budget priced. Newcomb says he expects the AR-247 to be released sometime

during the month of March.

For more information on the AR-247, or about the financial support program, please contact PREMIER Communications at 714-257-0300 Monday through Friday during normal West Coast business hours.

I'm with you, Bill. I give everyone 100 points to start off
and deduct as I go. Everyone deserves respect until proven
not to deserve it.

mike when you tell someone they got the deal that means that you are through selling.that means you accepted their offier and you do not accept someone elses offer after you told the first person they bought it. Grow up and learn something. It appears you do know much so far.

If a 'G' may comment. I think everyone deserves 'Courtesy', but
'Respect' does have to be earned, otherwise you are respecting someone
merely for breathing. Some attribute can be respected like 'knowledge'
,'skill','kindness', 'courage' etc.

Sorry to butt in!

You could ask if the frequency is in use. That is common courtesy. It would be far better than simply listening. You may not hear both sides of a conversation.

How does one ask in the data portion of the band? If I'm on RTTY and
I hear QRZ on CW, I'm sure not going to switch to CW to tell someone
the frequency is in use.

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated December 29, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

JANUARY 1999

Jan 3 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Jan 10 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

Jan 24 (Sun) - Villa Park, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - '98 at the Odeum Exposition Center 1033 N. Villa Ave., Villa Park, IL. Info: Pat Byrne, K9JAU, 414 North Park Blvd., Glen Ellyn, IL 60137. 630-545-9950. E-mail: k9jau@juno.com, http://www.w9ccu.org (Held inside and is usually crowded. - AJ9S)

Jan 31 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

FEBRUARY 1999

Feb 7 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Feb 14 (Sun), Rock Island, IL - Davenport ARC. QCCA Expo Center, 2621-4th Ave., Rock Island. 7:30 AM - 3:30 PM. Talk in 146.88 and 146.64 MHz. info: Kent Williams, K9UQI, 4245 10th St., East Moline, IL 61244-4154. tel. 309-796-0718. Fax: 309-796-0629. E-mail: k9uqi@arcsupport.com. http://www.arcsupport.com/drac

Feb 14 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

MARCH 1999

Mar 8 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail:

mjadams@execpc.com.

March ?? (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 22 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: Dave Gudewicz, KB9KDA, 5 Brigantine Lane, Grayslake, IL 60030. tel. 847-223-1088. (Small fest, but usually interesting - AJ9S.)

APRIL 1999

April 11 (Sun): Middleton, WI. Madison Area Repeater Association. 8 AM - 1 PM Middleton Conference Center, 1313 John Q. Hammons Drive Middleton, WI 53562. The Middleton Conference Center is located in Middleton, WI, near the west side of Madison, WI. From the intersection of Interstate 90 and Highways 12 and 18 near Madison's South-East corner, take Highway 12 West. Stay on Highway 12 until you reach Greenway Blvd. Exit to Greenway Blvd. and turn left. Then turn left on John Q. Hammons Drive. The Conference Center is attached to the Marriot which is clearly visible from the intersection of Highway 12 and Greenway Blvd. Talk-in Frequency: 147.75/.15. Info: Paul Toussaint, N9VWH, MARA President, prt@execpc.com. The MARA telephone voice mail (608)245-8890 . http://skywarn.ssec.wisc.edu/mara/swapfest

April ?? (Sun): Stickney, IL. Dupage Amateur Radio Club, Hawthorne Race Course. Hours 8 AM - 2 PM. Setup 6 AM.

AUGUST 1999

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am

- 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

Fox,

You have been told repeatedly there is no such animal. Gary Fibre told you and he is head of Icom Tech Support for the US. Fox there is no service manual for the IC-211 and spamming the newsgroups is not going to change that fact. Several posters have made constructive suggestions for repairing the usual failure modes for 211's give them a try. Just in case you haven't heard all this: THERE IS NO SERVICE MANUAL FOR THE IC-211.

965. The Dragon is Awake

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-15 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <369FB569.801CD698@ix.netcom.com>
Source record: 153349
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Concerning the recent kind appearance
of Mr. Hollingsworth on 75 meters:

Many of you remember my post some weeks ago about
how complaining to the feds about our problems was like
poking a sleeping dragon-- he is more likely
to fry and eat all of us then to help the complainers
because it's quicker and cheaper to do so.
I must speak out about this again.

Notice the threat from Mr. Hollingsworth
concerning auctioning-off the HF bands.

This is EXACTLY what I was talking about. I'm certain
Mr. Hollingsworth is an honorable man trying to do
an honorable job. Reports from people who have spoken
with him are overwhelmingly positive.
The trouble is-- he's not the final boss.

The top hats at the FCC are like all Washington brass-hats;
they want the quickest fix for the least money.
Add in the prospect of *making* some money
and they will positively LEAP at that "quick fix."

Awakening the "sleeping dragon" of the FCC
by whining about minor problems that we
could handle ourselves is inviting disaster.
It could be 1972 all over again
but much, much worse.

There may yet be a chance to turn this around.
I implore my fellow radio amateurs to
immediatly cease calling the FCC and stirring-up
the dragon. Responsible hams in every community
can organize to handle the bad-eggs in non-violent,
legal ways. Federal intervention is a bad idea.
Social ostracism, public "outing," peer pressure
and non-threatening visits will fix 99% of the problems
without the heavy federal hand. Only the tiny
fraction of true "crazies" need ever come to
the FCC's attention, and then only after all
private-sector actions have failed.

Look at the "big picture."
Only a vanishingly small number of the nearly

half-million radio amateurs create 90% of this
hoop-la and nonsense. While there are
"hot spots" like Southern California,
these loonies are, relative to the entire amateur radio
community, a very minor problem.
Notwithstanding the Burts of the world,
the vast majority of radio amateurs
are law-abiding, helpful, decent and ready
to be of service to the community.

We all agree that "the rule of law" is very important.
If we lived in a world with unlimited resources
and time, we could enforce every law even in
minor cases such as these. We do not.
The FCC must prioritize the expenditure of
its publicly-owned resources.

Let the FCC return to spending its time and
resources in responsible ways. There are
plenty of life, property and commerce-
threatening cases to which they should devote
their energies. The DEA could certainly use
their help on the boarder and there are
still clowns jamming public service
(police, aircraft, etc.) frequencies
who need to be found and hung.
Spending time and money on
a few drunks and loonies on the ham bands
is an irresponsible waste of the
Commission's time and resources.

We must clean our own house or
the dragon will burn it down for us.

Respectfully,
David Stinson AB5S

You also can get a Dentron Clipperton V 2 meter amp that tunes to
6 meters for less used. I have one that I picked up for $400.
This amp uses a 4cx250b and is well built!

SB QST @ ARL $ARLB004
ARLB004 FCC official meets hams on their own turf

ZCZC AG04
QST de W1AW
ARRL Bulletin 4 ARLB004
>From ARRL Headquarters
Newington CT January 14, 1999
To all radio amateurs

SB QST ARL ARLB004
ARLB004 FCC official meets hams on their own turf

The FCC's Amateur Radio enforcer, Riley Hollingsworth, K4ZDH, turned up in an unexpected place January 13--75 meters. In what could be an unprecedented move, Hollingsworth, legal advisor for amateur enforcement within the FCC's Compliance and Information Bureau, showed up at around 3894 kHz to discuss enforcement and encourage compliance.

''A couple of them were pretty shocked,'' he said. ''This has never been tried before,'' Hollingsworth said the next morning. He said he broke in on an argument that was growing increasingly nasty in an effort to settle things down, then stayed to discuss enforcement with the hams on frequency.

Hollingsworth says he thinks one key to compliance is just getting people to listen to what he has to say. ''Most people, if you can just get to them on a one-to-one basis, they'll listen,'' he said, reflecting his overall enforcement approach to attempt to reason violators into voluntary compliance rather than writing them up. During his time on the air, Hollinsgworth confronted one individual he'd already been in touch with about alleged on-air misbehavior.

Among other things, he told those on hand that noncompliance and inappropriate on-air behavior could even threaten the hobby's HF allocations. Hollingsworth advised hams to be more tolerant and patient and to avoid confrontation or retaliation.

''We all have to realize we're on a mission here: to save Amateur Radio,'' he said the day after his 75-meter appearance. ''There are going to be licenses lost and fines owed.'' The jammers already are well on their way to ''hanging themselves'' right now, he said.

Even as he preached better behavior, Hollingsworth says he understood from the others on frequency that someone was attempting

to jam his signal. ''I hope the monitoring folks were on the frequency too,'' he said.

Hollingsworth advised the hams on 75 to contact him with enforcement problems, and he gave out his e-mail address and telephone number, rholling@fcc.gov, 717-338-2502. ''I don't know what effect it will have,'' he said of his on-air foray. Hollingsworth says he'll ''do what it takes'' to improve amateur compliance, and that could include future on-air visits with amateurs.

''I've gotten a lot of feedback this morning by phone and e-mail asking me to do it more often,'' he said. ''We'll be listening more and asking to be allowed in QSOs more.''

Hollingsworth, who's based in Gettysburg, Pennsylvania, took over the FCC's most recent Amateur Radio enforcement initiative last September.

Painting and lighting of radio station antenna support structures
(towers) is the FCC's "problem". The only thing the FAA does
is to determine if and how the structure is to be marked/lit and
to issue a derermination to the tower OWNER (not necessarily the
licensee of the station involved) as part of the FCC's Tower
Registration program

Enforcement is the FCC's bag.

Quirk of the law -- before any license is issued and/or the tower
is "registered", the structure comes under the FAA's enforcement
jurisdiction. Once the license is issued and/or the tower is
"registered", the structure comes under the FCC's jurisdiction.
After the license is cancelled/expired and the antenna is
removed, the structure remains "registered" and the jurisdiction
remains with the FCC until the structure is torn down/removed.

Real life is stranger than fiction......

check if the frequency is clear...

>Bill K2UNK

Not true. The the frequency may sound clear to you, but the a station transmitting on the frequency may be out skip distance range from you so you *don't* hear it. However the listening station, within skip range of you, will hear you QRM his contact when you start transmitting without warning. The best CW procedure is to send "QRL" (frequency busy?) which allows the silent listening station to respond "C" (yes).

Hi, Dan,

I, too, have the ADMS-1 software, etc., but recently lost the short adaptor cable which fits between the radio and the "regular" PC connecting cable. Without it, I can't get the info down from my PC to the radio, and Yaesu tells me they are not sold without the software package. Would you know of any electronics store which carries that kind of adaptor? Thanks,
Valerie.

For those of us who are interested in such things, I just saw a ham tri-bander in the movie, "National Lampoon's Vacation."

This is the original "Vacation" movie, with Chevy Chase where the family takes their new car to Wally World.

At the beginning of the movie, as Chevy Chase pulls his new car into the driveway you can see a tower and tri-bander at the house next door. For all of us who have to fight against restrictive convenants, it's interesting to note that this is a nice neighborhood... definitely, upper middle class.

The tri-bander was a four element one... it looked a little like one of the TET or KLM models.

Admittedly it's not much more than a blip on the screen, but at least it shows a nice neighborhood with a tower and beam.

As I contend, towers and antennas are works of art, and not only should there be NO restrictions on them, but there should be tax breaks and other incentives for people to install them. :-)

Respect has to be earned. If the PhD in EE has volunteered quite a bit of time with RACES or ARES or Skywarn or other community communications activities, he has my respect. If he's doing R&D on the amateur radio frequencies, he has my respect. If he's operating gear he's built himself, he has my respect. If he's happy with his V/UHF privileges and doesn't whine about being "forced" to learn the code for HF privileges, then he also has my respect.

Why must anyone listen for CW at all? Just because we
are allowed RTTY/DATA n certain segments, we aren't
required to be able to listen and decode such RTTY/DATA
messages just because they are there. In that same vain,
there's no expectation that anyone must have the
capability to decode morse (CW) just because it is there.

Do you actually listen and decode every CW signal you
dial past? I really doubt it.

Cheers,
Bill K2UNK

What? Jeffrey, Jeffrey, Jeffrey, Allow me to point out that...

Since CW is the only mode which is allowed on any *FREQUENCY ABOVE 50 MHz*,
no matter what mode you choose to use, you're operating on a frequency
designated for CW. That alone is *NOT* reason enough to require you have a
knowledge of code.

Two bands ABOVE 50 MHz have spectrum dedicated for 'CW ONLY'. I shouldn't
have to remind you that Technician Class operators have full privileges of
same.

:I don't believe modulated CW is permitted below 30 MHz.

WRONG!!! Read Part 97.3 (c) (5) Phone.

Any questions?

Not that I can find.

She did the Blondie radio show from 1939 to 1944 but wasn't on the
Blondie TV show.

She was the voice of Jane Jetson in the original 24 episodes of The
Jetsons cartoon (1962-1963).

SB QST @ ARL $ARLB003
ARLB003 FCC warns alleged major amateur offenders

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
>From ARRL Headquarters
Newington CT January 14, 1999
To all radio amateurs

SB QST ARL ARLB003
ARLB003 FCC warns alleged major amateur offenders

The FCC has issued strong warnings to two amateurs in Indiana and a third in New York who are on the Commission's top ten list of alleged major amateur offenders. The FCC's amateur enforcement point man, Riley Hollingsworth, K4ZDH, says the warning letters sent earlier this month are the last step before the FCC initiates formal enforcement proceedings. One case primarily involved malicious interference on VHF repeaters, while the other two involved interference to an HF net.

''We have been cutting bait a while, now it's time for us to fish,'' said Hollingsworth, the legal advisor for enforcement within the FCC's Compliance and Information Bureau.

The FCC did not make the names or call signs public, but Hollingsworth said all those who received the letters were put on the FCC's Alert List with FCC field offices. ''The Alert List is the FCC equivalent of an all-points bulletin,'' Hollingsworth explained. He said Field Office monitors would be making a special effort to listen for further violations by stations on the Alert List.

Since taking over Amateur Radio enforcement within the CIB last fall, Hollingsworth says he's sent out dozens of warning letters of a much milder nature. ''Now, we're distilling that activity to the worst offenders,'' he said, adding that similar actions were imminent in other major cases.

The letters sent out January 7 and 8 spell out the agency's expectations in no uncertain terms. In the case of the alleged HF offenders, Hollingsworth's letters state that the Commission ''has additional evidence that you have been deliberately and maliciously interfering with the operations of other licensed amateurs,'' primarily a 75-meter net. Both hams--whose cases are related--already had received official Notices of Violation last

fall for similar conduct, and the FCC had imposed restricted operating hours on one of them. But the FCC says that the troublesome behavior has continued.

Hollingsworth said the alleged illegal activities not only put the hams' licenses in jeopardy but open them up to possible fines and even put transmitting equipment at risk of seizure. He said he also has cautioned the controllers of the net involved to not engage hecklers or those attempting to harass or interfere, nor to call up the net on a busy frequency. ''One thing these nets have to understand is that the nets don't own the frequency,'' he said.

The case of the alleged VHF offender had a similar pattern. The amateur license of the ham in question already had been suspended at one point, but violations are said to have continued, even during the suspension period. Beyond amateur violations, Hollingsworth said that the FCC's evidence indicated the amateur had threatened FCC employees and others. He told the ARRL that additional warning letters went out to eight other individuals whom he described as ''cohorts'' to the alleged prime VHF offender.

Hollingsworth requested that all of the amateurs involved contact him immediately to discuss the allegations.

First of all. NO there is no other store that will have that adapter. It is not just a piece of wire it has electronics built in to the DB9 connector. On the up side all of the ADMS cables (1&2) are all the same except for the plug on the radio end. So if you find any Yaesu cable it can be made to work.
If you have the abilities there is a schematic of the circuit that is in the cable here.
http://www.icongrp.com/~sllewd/pcware.htm

Good Luck.

> I didn't think I had lost anything, but...

Best way to go is get a PA-6 adapter if you can find one. There is no ready made plug for 12v on the radio. There is a rubber plug and I believe a place to tap power to the radio inside, but I never bothered with it. I just went the PA-6 route. I think Yaesu might have planned to have a 12v connector in the design but decided to cut it for some reason. They put it on the ft-570. If you couldn't find a pa-6, you could make an adapter from an empty aa battery case which they sell for the ft-470 at most nicad battery companies. MK

They weren't an option on the 530, but the old ts-520 had a 12v supply
built on to the back of the rig. You could possibly find this circuit
and copy to a ts-530. Not sure if it would work or not , but the rigs
aren't that much different. This 120v supply was also sold as an option
for the ts-520s . MK

> 5, 13 or 20wpm throughput rates. Why is this a bad thing? Why do you
> say that it's not real CW and shouldn't be used for tests?
Did I say it wasn't real cw? I don't think so. I think the method is
great for learning and learning only. When a guy or gal goes in to take
a 13 wpm test, the charactors and spacing should be 13 wpm. I've seen
people that studied using normal spacing that could copy solid, fail the
test using the farnsworth faster characters. They DID NOT study 20 wpm
characters, and they are not taking a 20 wpm test. There is no reason to
have to listen to 20 wpm characters on such a test. If a person can copy
20 wpm characters, he can sure as heck copy them at 13. What the
farnsworth method IS good for ,is avoiding the steep hump you can get
from going from say 10 to 20 wpm. So I do recommend it for learning the
code. Just leave it off the tests. MK

> Dan KC5ALC
What rig, a kenwood? Thats a pretty good sounding mike to butcher up if
it still has a good element. At least for alot of kenwood radios. I
don't really recommend unless you need more cut for dx or whatever. If
you did go with a heil element, I go with the "5" element. It's the
smoothest of the bunch. Myself, I'd keep the MC-50 intact and build the
heil in a different case. there is still quite a demand for MC-50's. You
might regret hacking it up some day. MK

If you WHINE abt CODE TESTS, or WHINE abt LIDS MAKING IDLE THREATS AND USING BAD WORDS AS IF YOU DONT HAVE A TUNING KNOB AND THERE ARENT OTHER FREQS and your MOMMA never told you sticks and stones, this Bud's for YOU...

The widow of a long-time friend just called. And this reminded me that it was nine years ago last October that Tom Moody, W4HJQ, passed away. If you have been on VHF very long, you probably worked him--most likely on 144 MHz. So, on this ninth anniversary of the passing of W4HJQ, I thought I'd remind any remaining "Old Timers" a little about the fellow they no doubt worked, probably many times, and retell his tale for the benefit of those who have come along since.

Most hams--even within the VHF/UHF community--probably did not know anything about Tom. Only those of us who lived near him and a few special friends knew how he operated. Tom was a quadriplegic. He also was a long-time, long-haul VHF DX operator. Tom operated lying prone in a bed.

When he was just 17 and in the Army, he suffered a broken neck that left him paralyzed. He only had use of his shoulder and upper arm muscles. Yet he held WAS and WAC on 28, 50, and 144 MHz. (I'm not sure what he had on 432, and I don't think he kept count on the HF bands).

He could have been waived on the "mechanical" part of the code exams, but he insisted on sending (with a straight key) and copying on paper (requiring both hands to handle a pencil). He passed both the 5 and 13 WPM tests this way and held an Advanced class license at the time of his death--which came some 45 years after the accident that disabled him.

Searching through the HF cw bands should find you some good qso's with
other not so fast cw'ers. Try 40 or 80 meters at night.

BD <bodu@pobox.com> wrote in article <77qq33$3ho$1@newnews.startext.net>...
: Wow.. They don't get paid?! ;)
: I took my Technician exams on Main & 5'th in Irving, Tx. (at some little
: church they were using) and had a totally different experience than I
: expected from volunteers.. GREAT people!!
: The testee's were also a bit of a surprise.. Instead of a bunch of
"geeky"
: old men (I thought I'd be totally outta place.. haha), it looked like a
few
: families.. A woman, a few young men, and 2 early-elementary school age'd
: kids.
:
: Not that my opinions wouldn't have been 100% different if they'd failed
: me.....ar-ar
:
: Also... Is there a "common" way to locate others with Technician licenses
: who're wanted to practice morse-code over the air? That's ok, isn't it?
: Tapes and computer "just doesn't do it for me..." BORING...
: Probably learn all this from the club (there's even one in my town), but

I've got a better quote - note that you won't see MCW explicitly mentioned
(nor authorized) below 50 MHz:

97.305 Authorized emission types.
(a) An amateur station may transmit a CW emission on any frequency authorized
to the control operator.
(b) A station may transmit a test emission on any frequency authorized to
the control operator for brief periods for experimental purposes, except that
no pulse modulation emission may be transmitted on any frequency where
pulse is not specifically authorized.
(c) A station may transmit the following emission types on the frequencies
indicated, as authorized to the control operator, subject to the
standards specified in 97.307(f) of this part.
Wavelength Frequencies Emission Types Standards
band Authorized See 97.307(f),
paragraph:

Well Dave I can't speak for others but I would move. It is too bad
the CW crowd doesn't give the same respect and courtesy to the digital
folk. The most common QRM that I experience when operating digital
is an inconsiderate CW op who starts up right on a RTTY QSO. Giving
them the benifit of the doubt that they don't hear either RTTY
station why is it that they don't send QRL before launching their
auto keyer into a 2 minute CQ CQ CQ..... Could it be INTENTIONAL ???

1025. FCC's Kennard vs. Hollingsworth??

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-16 00:00:00 UTC
From: jibber--jabber@webtv.net
Message-ID: <7855-36A11533-99@newsd-112.bryant.webtv.net>
Source record: 153231

(REPOST) WASHINGTON, D.C. (IP) FCC Chairman William Kennard will be receiving a special package in the mail this upcoming week. Kennard, an African-American appointee of President Clinton, will receive a tape recording filled with intense racial slurs uttered by a South Carolina ham radio operator.

The ham radio operator, Richard L. Whiten, has become the focus of attention after an incident last November when he was in contact with an African-American radio operator from Illinois. Whiten is said to have used racial slurs and epithets against the Illinois operator. Hundreds of ham radio operators from around the country heard the verbal assault, and filed complaints with the Federal Communications Commission. The complaints prompted renewed FCC enforcement efforts against illegal ham radio operation.

But the story has taken an interesting twist. Instead of the Federal Communications Commissioners taking action against the alleged perpetrator, the FCC has turned its focus on the people who are trying to expose Whiten. Several ham operators have been threatened by FCC officials for attempting to reveal Whiten's actions. It also appears as if the head of the FCC's Enforcement Bureau, W. Riley Holingsworth, may actually be taking direction from Mr. Whiten. Yesterday, several phone calls were placed by Hollingsworth, to Whiten, according to sources.

"It doesn't suprise me." states Donald Anderson a ham radio operator from Macon, Georgia. "With all of the crap happening in the White House, it doesn't surprise me that it's now trickling down to the FCC." says Anderson. "Federal government corruption is everywhere."
Several attempts were made to reach the office of W. Riley Hollingsworth, but an FCC official stated he was not available for comment.

They're not so bad, but if you want reliability go with the Mastr II or Micor.

We had one that we modified the bloody hell out of. By the time we were done it put out 50W and the controller had some interesting features built into it.

Riley and I worked together at the FCC for more than 15 years
and I know that he is well aware that FCC Rules Part 17 spell
out what I summarized.

Perhaps you misinterpreted what he said or he answered a
different question from the one that you thought he did.

I didn't hear the QSO but what he may have said is that the
Field Operations Bureau (now known as CIB) no longer makes the
rules about tower marking. That is true. It's Riley's old
bureau, the Wireless Telecommunications Bureau (known to us
cynical "FCC alumni" as the Witless Telegraph Bureau) that
makes the rules in accordance with FAA guidelines and registers
the towers in accordance with FAA Hazard Determinations (I've
done a bunch of the latter for clients).

The field folks still do the inspections and hand out the
notices.

It's all in FCC Rules Part 17. Read it there.

Joe,
You said it didnt work on 40m, but didnt say transmit and/or receive.
Icom's web page has a section on the most common problems on various radios.
Under the 706, it has a problem listed as not transmitting on one band. The
fix is just what Stuart mentioned in his reply, a filter.

Andy,

The reason why it took two sessions for me to earn my Advanced ticket
was that the VECs were running a short session and there wasn't time for
me to take any more than Element 1B, 2, 3A and 3B. As a result, I took
and passed 4A and 4B at the next VEC session.

By the way, I did not intend to imply anything about the intelligence of
General Class license holders. I just pointed out that there was no
increment of CW speed between General and Advanced. The written test
elements are just not that difficult - mostly memorization and a little
basic physics. It would be a mistake to associate relative intelligence
with license class in any case. The current license structure rewards
those who make a modest effort to study the code, the rules and the
theory. There's nothing wrong with that.

Andy,

Accomplishment speaks for itself. Academic credentials can open doors,
but they're not absolutely required in order to achieve great things.

By the way, there actually has been a general decline in undergraduate
student entry level scores in the past 15 years. This is most obvious
in the technical disciplines. It is my belief that this decline is
caused by a lack of work ethic emphasis at the middle and high-school
levels.

Am I the only one who doesn't see conspiracy around every corner? Do
you also believe that black unmarked helicopters and UN occupation
troops are enforcing the New World Order in the US...etc? Do you really
think that ham radio is important enough to be a potential target of a
government conspiracy? This post seems a bit paranoid. I agree that
there is a big problem with credibility in Washington DC right now, and
I don't support the kind of alleged behavior that has been attributed to
Mr. Whiten -- but isn't this a bit much?

PLEASE elaborate. There is NO legal way EXCEPT
through FCC enforcement. WE have no legal powers
against fellow hams that violate Part 97 rules.

>Federal intervention is a bad idea.

See comment above again.

>Social ostracism, public "outing," peer pressure
>and non-threatening visits will fix 99% of the problems
>without the heavy federal hand.

If you believe this, you live in a fairy land. The
abusers that many of us want off the air are
way beyond any such possibility of responding
to peer pressure at all. Public outing...to what
and to where? Social ostracism? What is
that anyway?

>Only the tiny
>fraction of true "crazies" need ever come to
>the FCC's attention, and then only after all
>private-sector actions have failed.

The problems ARE just those tiny fraction of crazies.
Again, there is NO private sector action (legal
action) available as a means of recourse anyway.

>Look at the "big picture."
>Only a vanishingly small number of the nearly
>half-million radio amateurs create 90% of this
>hoop-la and nonsense. While there are
>"hot spots" like Southern California,
>these loonies are, relative to the entire amateur radio
>community, a very minor problem.

Exactly, and that has always been the case. The problem has
gotten worse due to lack of consistent and constant
enforcement against those worst case offenders.

>Notwithstanding the Burts of the world,
>the vast majority of radio amateurs
>are law-abiding, helpful, decent and ready
>to be of service to the community.

True, but nothing short of the FCC is useful now
in regards to those that are outside of this
mainstream ham community.

>We all agree that "the rule of law" is very important.
>If we lived in a world with unlimited resources
>and time, we could enforce every law even in
>minor cases such as these. We do not.
>The FCC must prioritize the expenditure of
>its publicly-owned resources.

Agree again, BUT it must include getting the
worst case offenders of the air too.

>Let the FCC return to spending its time and
>resources in responsible ways. There are
>plenty of life, property and commerce-
>threatening cases to which they should devote
>their energies. The DEA could certainly use
>their help on the boarder and there are
>still clowns jamming public service
>(police, aircraft, etc.) frequencies
>who need to be found and hung.
>Spending time and money on
>a few drunks and loonies on the ham bands
>is an irresponsible waste of the
>Commission's time and resources.

Then you really don't want that cleaned up at all
because if you did, and
if you really thought this through, and
if you really thought about these drunks and loonies,
then you'd know they don't give a damn about
being chastised, outed, or otherwise singled out
for attention by any non-law enforcement effort
at all. Indeed, it seems many welcome the
attention. They are at a point where ONLY
the FCC can take them down.

>We must clean our own house or
>the dragon will burn it down for us.

With no actual FCC enforcement against
the extreme elements, those that might follow such paths
have nothing to fear at all and the number of
crazies and loonies will grow.

Cheers,
Bill K2UNK

>>privileges and doesn't whine about being "forced" to learn the code
>>for HF privileges, then he also has my respect.

No where did I say that I looked down upon anyone. Failing having
participated in any of the above activities, I'd have very
neutral feelings toward your PhD EE friend, as I do all strangers
with whom I've never met. I'd respect him as a fellow human being,
but regarding him being an amateur, my opinion of him would be neutral,
zero (using the additive property of zero, not its multiplicative
property). His PhD doesn't earn him any more respect than any other
amateur. But once he begins whining for HF privileges without being
"forced" to learn the code, he then moves to the negative side of the
respect scale.

Your editing skills are awful, Cecil. For that, you get a:

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

Please Welcome:

Current Events:

HAM HELPS NAB ROAD-RAGE SUSPECT
A California ham was instrumental in helping police to nab an angry motorist who had seriously injured another motorist after being cut off on the freeway in mid-December.

According to an account in The Orange County Register, the angry driver followed the other driver for miles "before confronting him on a busy city street, shoving him under an accelerating big rig, and kicking him even after he had been run over." The account says that the angry driver and his two co-workers drove off. But they were caught later in the morning when Ed Greany, KB6DOL, of Corona, heard a broadcast description of the vehicle and then saw the men pass by. He notified police via ham radio, and they arrested Richard Snyder, 28 and two others on suspicion of attempted murder.

The newspaper said Snyder had a string of previous convictions, and his license had been suspended. The injured motorist was reported in serious condition.

According to the FCC database, the Greany household includes three hams: Roberta Greany, KC6AEP, and Michael Greany, KE6RDT. All are ARRL members.--thanks to Charlie Clifford Jr, W6QMY
(From the ARRL Letter)
.....

What's New on the Web:

From: "Linda Olmstead" <LOlmstead@chp.ca.gov>

Greetings, all!!!

The CHP's official web-site NOW includes Monterey CHP in its listing of CAD Centers available online.

So, if you want to be able to select traffic incident
information from all sixteen of the 24 CHP Comm Centers
currently on CAD, simply use this URL:

http://cad.chp.ca.gov/

It's a framed site....

Comm Center selections will be listed in the left navigation
panel, and I must warn you that the default "blue" link color
tends to blend into the background if you're an AOL user....

But hey, running your cursor over that panel will letcha see the
choices in your browser's bottom line. <sigh>

Another quick explanation: this is ONLY to provide information
to the Media (and public) about TRAFFIC incidents we're working.
All the secret-squirrel enforcement stuff (like stops, pursuits,
yadda yadda yadda) are NOT listed.

Enjoy!

Happy to be here, proud to serve.
Linda

This week's EMCOMM Bulletin:

EMC166 Repeaters?
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC166 Repeaters? For release 1/11/99

Sure, YOU know what a repeater is, and what it does. But what
about the non-technically oriented staff in the emergency
management agency, such as the person with the money strings?
Or the manager who hasn't time to grasp the fundamentals of
communications?

Part of the task for the leaders of an all-volunteer emergency communications resource - which we generically designate as an EMCOMM UNIT - is to insure that such essential staff does understand the function of repeaters and how critical they are to emergency communications.

What, then, is a "repeater?" A repeater is a specially built radio with separate transmit and receive units. It achieves its major impact on an area when it is high on a building or a mountain. For that reason, tall buildings and mountaintop locations are very important assets to a jurisdiction or agency.

A repeater will take in a signal on one frequency and send it out on another, usually with a strong boost in signal strength. Repeaters' sensitive receivers can pick up weak transmissions (such as from a hand-held or vehicle-mounted transceiver) and then rebroadcast them through a powerful transmitter. In many cases, repeaters include a connection to the telephone system with an "auto-patch". Users with the appropriate access codes can then access the phone system. While cellular telephones offer a similar service, the wide and uncontrolled use of cell phones causes overload to the cellular system. Also, earthbound cellular systems do not have continuous coverage in mountainous areas.

Repeaters play a key role in disaster preparedness and response, in that communications can be made in ways not otherwise possible. Strategic placement, as on a key mountaintop, allows coverage of vast areas of terrain, often in ways not otherwise possible. For instance, repeaters atop Mt. Diablo in west central California cover hundreds of miles of the center of the huge state.

Yet, there ARE areas of the state that are blocked from coverage, such as where other mountain ranges are barriers to radio signals. Hence, in Northern California with several such ranges, signals from Mt. Diablo cannot be received in areas such as Redding, Eureka, Yreka, Alturas, and others. So, to intercommunicate into/from and IN such areas, other repeaters are needed. In some areas it takes a multitude of repeaters to create effective coverage and links. The I-5 corridor of northern California is one such example. As I-5 winds its way through the Cascade mountains past Mt. Shasta into Oregon, it takes a certain placement of interlinked repeaters for effective communications.

Repeaters are expensive equipment, with high technical standards requiring quality components. They operate 24 hours a day, 365 days a year, and do it for years. Repeaters contain critical circuits that allow them to transmit pre-prepared messages, accept programming over the radio or a telephone, receive or transmit in a tone-controlled manner, readjust time-limit constraints, or accept coded access. They are typically put in

environments extremely hostile to electronic equipment, like a mountaintop snowbound in winter. Maintenance of repeaters in such locations can be a time-consuming and difficult challenge. Because of the relatively high cost of repeater ownership and operation, those used by Amateur Radio Service licensees may be sponsored by local radio clubs or by unit membership dues if an agency cannot provide, or assist with, the needed funds. end ---

The Mk1s have a pin diode problem. Some diode will go out in the front end. If you don't use it too much, you won't harm anything except the diodes (which are abour $3 to replace and about $100 labor). If you key up too much, you'll nuke the finals- that gets a little more expensive (like $300+ for the module and $150-200 for labor). You might want to send it in if you can't figure anything else out.

Seems as though everyone is just waiting for the other shoe to drop.What ever happened to the one class of license idea to simplify things. Why is it that the ARRL frowns on such an idea.I would think a two license structure like the old Novice Class. A one year,non renewable license would be a good introductry class.

As for the code, something in the order of 10 wpm would help keep the CW bands from being messed up with hackers. One year as a Novice should get you there

So to sum things up we now have a Extra for those who decide to make a go of it, and the Novice for those who think they want to give it a try. Simple ?

If all else fails, ARRL can publish a magazine on basket weaving to take up the slack.

"QRZ" is "Who is calling me?" "QRL?" is "Are you busy?".

The point was, YOU ask if the frequency is in use before YOU operate.
If you are operating RTTY and here someone using CW, you're going to
find another frequency to use, right?

If you'd been around a relatively short time ago you'd know that know-
ledge of code was required for even a V/UHF license. It being waived
is something of a recent occurrence; we were promised that waiving item
would help to populate our endangered upper spectrum. That Big Lie
only brought in 2m HT toting appliance operators. We went along with
the Big Lie because CW use up there was never on equal footing with
phone like it is on M/HF. Also, the ITU does not require knowledge of
code above 30 MHz.

>:I don't believe modulated CW is permitted below 30 MHz.

>WRONG!!! Read Part 97.3 (c) (5) Phone. Any questions?

Yes. Why don't you read S97.305? MCW is not permitted below 6m.
It wastes too much spectrum to be allowed on ARS HF. I used it
for years on 500.0 kHz; my transmissions were so broad (that's its
primary purpose) that I could be copied from 490 through 510 kHz.

Respect is not a discrete quantity; we don't measure it on a scale composed of only zero and one. I imagine that you feel a different level of respect towards a stranger than towards your beloved Doctor Williamson. Hence, someone who hasn't eared my respect is thought of in a neutral manner, not "looked down upon."

You still have it upside down, Cecil. YOU are tuning around for a spot.
You hear CW being used on a frequency you're tuning past. YOU are not
going to crank up an RTTY signal on the frequency are you? YOU are
going to find another spot which is not occupied.

You have to seriously question why W. Riley Hollingsworth is "buddying-up" to Richard Whiten, WB2OTK, one of amateur radios most vulgar and obscene amateur radio operators.

But for some strange reason, WB2OTK and his buddy, AF2Y, are CONTINUALLY exempted from ANY enforcement action! Why???

Could it be politics?? We KNOW AF2Y and WB2OTK are staunch supporters of our criminal President. And I'm sure W. Riley Hollingsworth is a Democrat, hired by a Democratic administration.

Is Hollingsworth playing favorites?? Is Hollingsworth "playing politics"????

I have read Part 97.305 and notice that phone is allowed under 30 MHz. Now I
quote under Part 97.3 (c) (5)

Phone. Speech and other sound emissions having designators with A, C, D, F,
G, H, J or R as the first symbol; 1, 2 or 3 as the second symbol; E as the
third symbol. Also speech emissions having B as the first symbol; 7, 8 or 9

as the second symbol; E as the third symbol. MCW for the purpose of performing the station identification procedure, or for providing telegraphy practice interspersed with speech. Incidental tones for the purpose of selective calling or alerting or to control the level of a demodulated signal may also be considered phone.

Also, in my ARRL book "The FCC Rule Book - Guide to the FCC Regulations" I quote...

MCW even with soft keying and a clean sine-wave modulating tone, is not generally permitted in the crowded HF ham bands for general communications, for example as a substitute for CW. But there has been, and still is, a special provision in the rules for MCW in the HF bands; that is for code-practice transmissions interspersed with voice announcements in the phone bands.

I believe this emission type should have been allowed for Novice Class and Tech Plus Class in the 10 meter band. When J3E and R3E were allowed this also should have been included. A small subband i.e. 28.300 - 28.325 could have been designated and it would have provided a place for newbies to non-impersonally work on code.

Any Questions?

As I suspected long ago, this recent "enforcement" move will allow the real amateur radio crooks to go free, and instead, persecute the practitioners of free speech. Just as in the Clinton White House, the supporters of vulgarity, obscenity, indecency and racism will be allowed to continue in their wicked ways, while the people who try to EXPOSE them, will be punished.

This MUST be stopped! For those of you who receive threats, warnings and NAL's from W. Riley Hollingsworth, and you feel they are politically motiviated, I have a name and number for you to contact:

Mr. Ashton Hardy
111 Veterans
Metaire, LA 70005

1-504-830-4646

For those inside communications, many will recognize Mr. Hardy's name as a true patriot who once worked within the noble ranks of the Reagan-Bush administration's Federal Communications Commission. Mr. Hardy is now in a distinguished private practice. But he's a staunch Conservative Republican willing to go to bat for you in your fight for free speech!

Wake up America!

Pete

Curt--

This argument borders on being elitist--you are saying, in effect, that all General class holders are stupid since no additional morse is required to move to Advanced where you pick up substantially more spectrum. If the Advanced test is so easy, why doesn't every General pass that test when he passes the General test?

Pork Butt has NO idea of the pressure being put on the FCC from CREDIBLE sources within ham radio to eliminate him from the airwaves.

Amateur/SWL media, radio dealers, private attorneys who are active amateur radio operators, are ALL banding together to protest this alliance W. Riley Hollingsworth has made with WB2OTK, the filthiest ham in amateur radio today.

Please, do your part and contact your Congressman and voice your disgust at W. Riley Hollingsworth's unfit and dishonorable behavior.

It's something like the 8620C sweeper. The band switch controls a
revolving drum which brings different range scales into the visible
window on the front panel and the tuning knob moves a pointer by
string, like an old radio set, horizonally across the scale markings.

Will CMOS supply enough current to light an LED (with series resistor)? Like the Q and not-Q outputs of a D f/f? I could try but I'd prefer not to fry a chip finding out. I suspect it won't but if it did it would save me a few LED driver transistors in a circuit I'm building.

TIA

I'm listening to WB2OTK with his warped logic which R. Riley Hollingsworth of the FCC seems to be in agreement with. KT4TR can go ahead and read his police reports and credit reports under freedom of speech, but he will be cited by the FCC for it "not being in good amateur practice".

On the other side of the coin, you've got WB2OTK with his cussing, swearing and racial slurs....which by the way....he HAS NOT STOPPED DOING.....and he declares he can do it because of the First Amendment. But WHY....I repeat Mr. Hollingsworth.....WHY can't you use that very same logic with WB2OTK and his language????? Surely THAT isn't in good amateur practice, is it Mr. Hollingsworth????

My twelve year old son has shown an interest in amateur radio. I would MUCH rather have him tuning across twenty meters and hearing someone reading court records, than hearing a bunch of foul-mouthed, racist sewage!!!!!

Folks,

Now that you mentioned the specifics, I recall hearing about this
shameful episode. I still don't think that the disgraced Clinton
administration would even be capable of arranging the sort of

conspiracies that some people seem to believe exist. I do believe that government administrators can be a bit Machiavellian, but on a much more localized and uncoordinated level. I doubt that Baldwin's comments were scripted or secretly endorsed by the White House. It also seems to be a stretch of imagination to think that there is a far reaching network of shadow government officials that would secretly protect him from legal action.

It's fun to postulate such things for entertainment purposes (X-Files, JFK, Independence Day...etc), but let's be realistic: Do you really think that such unseen forces could be that widespread and organized and still keep it a secret?

Source record: 153072

I was thinking about buying MFJ's new 10 Meter rig, the 9410. I was wondering if there is anyone out there who has purchased this radio, and what they think of it, is it any good, or not worth the money. This seems like the first new 10 Meter radio that has been manufactured since the new sunspot cycle has begun. Also, does anyone know of any other companies, such as Uniden, Radio Shack, that are planning on starting up production on new 10 Meter radios any time this year? It looks to me like these companies will probably come out with something eventually since 10 meters is on the upstart again, and it is a pretty easy band to get on and have some fun with. Please e-mail me if you can answer any of my questions. Thanks!

Hello.

This is a note that everything was sold * except ICOM-706 with tuner, SWR/Power tester and Pay as you go phone and carrying case. Thank you for your deals.

ICOM-706 is 100W (40W AM) on HF and 6m and 10W (4W AM) on 2m, multi-bander. You can transmit CW by using the mic (i.e. two buttons, one for short and one for long CW)

I am looking for $1099 Canadian funds. Please note, if you wish to buy in US funds from the US, I have to ask about $749 US funds. This is because I do not get much money when converting from US to Canadian as well it costs me more for shipping (note: shipping is included with quoted price) ; yet you shouldn't see this type of deal at any hamfests. If you dealt with me before, I can sell 706 with tuner for $999 Canadian or $679 US.

---> Front Panel Separation Cable will be attached with 706 purchase..
<--- Original box included.

If you can pick up (I live in Montreal), I will reduce $100.
Please note, I only accept money order, certified cheque or bank transfer (<- this is the best). No personal cheque please. No C.O.D.s as I do not hear good news about it (i.e. buyer who does not pick up afterwards... i.e.2. there will be extra charge for using C.O.D.).

Don't wait !! I only have one and once someone makes a deal... it's gone !!!!!

======

* Waiting the payment. If the deals do not go through, buyers on wait-list will be contacted.

There shouldn't be a problem using a keyboard. But at only 5 words per minute, you would have plenty of time to use pencil and paper to write down what you hear.

that's the
>where people are entering the hobby, and finding it's just not working for
them.
>You know, cuz' of jammers or just not being able to start up conversations
or
>whatever. I'm not sure, myself

Sounds good but who is "we"? Don't know what I can do to make 2m more fun, since I'm having a lot of fun on 2m so I'm not sure what everyone else is looking for. When I got in the hobby I had an interest in all facits of ham radio the only thing that kept me from doing a lot of them was the money required. Now 20 years later I have a little jingle so Im doing all kinds of things, and finding that it wasn't as expensive as I thought.

If someone joins ham radio and finds that 2m isn't working for them then they need to look at the hundreds of other things one can do in ham radio. If they don't have the drive to at least investigate then they were doomed to be bored with the hobby anyway.

Tim

Actually I am going to give additional 10% of the price quoted (i.e.
ICOM706 with tuner).
You will not see this type of price at any hamfests. Guaranteed.
I do not use them anymore and I would like to get rid of them as soon
as possible (i.e. before I move out of my place). If no buyer in a
week, I will give 15% off. But... I only have one so don't wait.
First come, first serve. First come then it's gone. If you would
like to negotiate the price, I am willing to... but I don't know if
you are going to see price less than the quoted one (10% off now...).

Thank you.

There must have been some popular support for the licensing procedure
and band plans otherwise changes wouldn't have been made. If it wasn't
the ARRL, then the input came from other amateur sources. I don't think
that the FCC sits around thinking up ways to make our lives more
difficult.

If we actively participate in rulemaking, then we DO have a
responsibility for the outcome. There is no good reason for the FCC to

develop an amateur policy that isn't supported by the majority of
amateurs.

It seems as if you are suggesting that amateur radio should not be
achievement-driven. Do you really mean to say this? Your statement
above also seems to imply that you think that the ARRL is "writing rules
in isolation". The ARRL can't write rules at all - the FCC makes the
rules. The ARRL and other ham organizations only act as representatives
of the amateur community. What exactly are "the large legal issues in
American Society" that are relevant to this discussion? Does this mean
that you think that amateurs are ready to file suit in order to have
easier access to license privileges?

If incentive licensing were removed and all privileges made equal, then
a powerful stimulus for learning would also be removed. As pointed out
in other posts, the main reason why people advance in license grade is
to gain more bandwidth.

>
> >the radio art" (our chartered purpose). This scenario has been tried on

I agree that you've put your finger on the main problem with 11m. I never meant to imply that CB operations ever required a code test or even a licensing exam. I simply used the state of 11m as an example of what happens when a radio service is populated by people who lack a sense of technical advancement and pride in their achievements.

sounds like another great idea to make a CB shop some money. They will just charge a fee to disable it. By the way, most hams are becoming appliance operators anyway. A lot of these CBers have to be given credit for trying to do something besides keying a mike and buying all their equipment ready made, no matter how stupid it may seem. A bunch of kids that don't fully understand what they are doing, experimenting with junk. hmm who is really the "Amateur" radio operator? Just a thought .... flame time?

Now that is a good point in favor of CW. It gets through because SSB'ers don't know how to jam it. Since they can't read CW I guess they don't know which signal to jam.... (I'm sure the State Police were impressed with ham radio in general, weren't they.)

snip

If you feel this strongly about saving the hobby, you should do what
it takes to get in there and fill that spectrum. BTW, they have no
interest in buying, or selling FTM, the hf bands... just the terminal
tech spectrum.

So, do one of two thing... or both... or neither:

1) go get on 2 mtrs and make some noise to occupy bandwidth to prove
how valuable it is (so you don't lose it)

or.....

2)re-channel all the energy you're burning up in whining about the
code into learning it. The hardest part about learning the code is
having the dedication to actually do it. Give up 1/2 hour a day of
time you spend posting to the NG's about how bad the code is, and
spend it on how bad you want to transmit on hf..... and it'll be all
history in a month.

PS: you think stuff bothers you know???? wait'll you get on HF,
there's a world of crap on there you won't agree with!

Oh, I don't know about that. My transmitter glows in the dark, goes kerchunk, weighs 1500 lb. and took me a good part of the summer of work to get it working on 160 meters and now that I'm on 160 meters, there seems to be more than enough nice folks to chat.

See: http://www.exit109.com/~jimh/bta-500r.shtml

And while I'm making contacts, I have my computer next to me on the www.qrz.com to help identify hams I contact and locate them with my DeLorme CD map. I have equipment that ranges from the early 40s to the 90s.

I also think that the code speed requirements will come down. Whether older hams want to support it or not, they should because otherwise, ham radio will die. The changing of the code requirements will encourage newcomers and might even encourage me to upgrade my 34 year General license to an Extra class! :-)

My first encounter with the infamous Burp Fisher was on Packet Radio.
A local ham posted a bulletin to all US BBS' and good ole Burpie took
it upon himself to berate, belittle and demean the ham because he
disagreed with the bulletin. The bulletin was about some
inconsequential thing that wasn't important to many, except the ham
posting and his possible responders. Burp had no business attacking
the ham, who just happened to be an elderly gentleman who barely knew
how to turn his computer on and connect to his local BBS. It was this
incident that made me think of Burp Fisher as I think of him today -
and his behavior on the usenet has only strengthened my opinions.
Plain and simple, Burp Fisher is an asshole. If he wants me to call
him one to his face, he needs to take a trip to Maine, I won't waste
my time or gas going to see him.

Wanted, anyone who commutes / travels between UK and Germany
on something like a regular basis by car, van or lorry that can help with
transport / delivery of a couple of items of radio gear. I'm trying to save
the
buyer some money on shipping costs and risk of damage, there will of course
be a modest cash incentive. I don't have the address in Germany yet, were
still negotiating on the items. I'm in Somerset but could meet and pass on
the items and I'm sure the guy in Germany would travel to meet whoever
wherever.

Anybody GENUINELY interested in helping ?

As an electrical engineer, all the amateur tests are easy. I passed all elements of the comercial tests long before I became a ham. But as a human being, I have to realize that not all people can grasp the concept of "Eddie the Electron".

I personally don't know why they don't incorporate the Advanced into the General...I wish I was so lucky to have Ham tests during final exam week.

I am not an advanced class because it doesn't serve my purpose. There is something in the hobbie for everyone. If you're not an advanced, it doesn't make you "less" of a ham...it just makes you different from someone who is an advanced class.

One can miss all the antenna/feedline questions plus all the SSB questions
plus all the FM questions and still pass the written exam. One cannot miss
all the Morse code questions and still pass the Morse code exam. Thus
Morse code is considered as important as everything else in ham radio
combined. That is NOT an equitable situation.

It's not a coincidence that you said 'apparently', think about it. Of course the FCC's table doesn't contradict the FCC's table. The FCC grants 'phone' privileges to General Class and above in the MF and HF spectrum. Included in that range of privileges (phone) is and I quote Part 97.3 Definitions (c) (5) Phone...

'...MCW for the purpose of performing the station identification procedure, or for providing telegraphy practice interspersed with speech. '

As Henry Hyde would say 'confirm or deny'! :-)

Thanks for the info, Dan. I understand there are a bunch of resistors and stuff inside the 4 conductor plug and it takes a really GOOD person with a soldering iron to wire everything correctly. Being a neophyte at this, I'm not likely to take up the challenge. But I'm wondering...would a Yaesu mike also come with a 4 conductor plug? Some mikes I've seen have headphone jacks built right into them, enabling the speaker to listen privately as well. If so, I would spring for a mike soooner than for a new ADMS-1 software package. Would that work? Thanks for your help. Valerie

I think you will find that many people get a license class that conveys privileges in accordance with their interests, and little more. For HF access, the General-class license gives a huge amount of privileges for taking two exams. I know several people who are still Generals, after several decades, because the "higher" license classes do not offer anything additional they are interested in -- the frequency allotments are minimal, and there are no additional "modes" available.

For instance, both my father and brother-in-law were Generals for years; both were primarily active in passing traffic on MARS and through the amateur traffic networks, and there was little reason to upgrade further because they didn't need to. My father-in-law, approaching 80, recently upgraded to Advanced to have something to do. I would have probably been happy with my General too, but the Advanced only required a few hours of preparation, so I figured "what the heck".

Different people have different motivations for getting their licenses, of course -- some people are concerned with class-envy, so they work on getting their "Extras" to show they are better than everyone else. Other Extras I know got their licenses because they wanted to work the DX in the lower 25kc of the band. Yet others did it so they wouldn't have to worry about "where they operate" on the amateur HF bands, since they would be licensed for *all* the spectrum.

Gentlemen,
it is really amazing how people act when a authority figure
shows up on our bands. man I havent heard a peep or saw
a thing here on the NG in quite some time. Used to see daily
someone threating to whip someones ass or sue them for slander.
almost the same on the bands. could it be we are turning into a
kinder more gentle bunch or the Badasses are hoping that the
''Proper Radio Practices'' will save them from the impending NAL
that has there name on it. any comments? 73 all n4jzh@amsat.org

Which brings up one more point---Should one encounter a
situation where neither SSB nor CW had enough clout to "get
through" in dire circumstances, clearly one should switch to
MCWif possible, to complete the communication. As you said
earlier, it gets through even better, as shown by many years
of use by USCG ant other maritime entities.

One more note: Worldradio Magazine for Feb '99 page 36
recounts a situation druing a Michigan State Police
emergency exercise in which radio amateurs were charged with
responsibility of establishing a point-to-point circuit
between the 'disaster' area in another city and the SEOC at
the state capitol.
First, the communication was atttempted using the linked
VHF repeater system. That failed. Then 75 meter SSB was
attempted. This also failed. Next 40 meter SSB was attempted
and this failed also due to malicious QRM and computer RFI
at the SEOC. Fortunately one of the hams at the SEOC was a
regular CW participant in the Michigan section CW net,'QMN'.
By switching to CW, the traffic was cleared quickly and
efficiently with no fills needed.

As a longtime public service communicator I experienced similar situations during a dozen years of activity in statewide emergency drills conducted in preparation for a massive earthquake on the New Madrid Fault.
Most of the time the SSB nets DID function, but then most of the time radio conditions were good. The VHF linked PACKET radio system performed dismally at best, and most often was totally useless from my region to the SEOC.
But CW was never even considered by the official planners, and during that time I, too, really didn't expect to ever need it. Surely all the modern technogolically superior modes and equipment would provide for all communciations needs. But regularly it didn't happen, and I came to believe, over that period of time, that retaining a CW capability in ham radio is essential to assure a higher percentage of possibility that the message can be passed under all possible circumstances.

Dave,

I completely agree with your analysis. I tend to design my exams so that people must apply their knowlege to a new set of problems -- such exams cannot be passed by memorization alone. Also, I never distribute test questions to a class prior to an exam. They may use exams from previous years as study guides, but they won't find the same questions on the real exams. These guidelines would be useful for amateur testing as well.

Improvements can be made to amateur testing today. I am simply against "dumbing down" any part of it in order to attract more people to the hobby. To me, removing or lowering the code requirement is a dilution of the standards. If an offsetting increase in theory level were required, then I would reduce my opposition towards the removal of CW testing. Under those circumstances, the only reasons for keeping CW testing would be to ensure that it remains a historical link with the past. In my view, it would be a shame if CW skills were to disappear for good in the coming decades, since that would be like the loss of a culturally-specific language. Code testing helps to preserve this important radio legacy.

Mark,

Within the amateur radio community, the government (FCC) simply provides
hams with a means of implementing an agreed upon licensing heirarchy.
The FCC didn't dream up the current set of license classes all by
themselves -- they listened to the ARRL and others and acted
accordingly. It is said that we are a self-policing group; we have also
helped to shape our own licensing requirements. The "pat on the back"
you refer to does not come from the government, but from ourselves and
from our peers who created the structure we currently live with. If we
want amateur radio to be an achievement-driven hobby, then we should
stick with the current kind of plan. The alternative would be a simple
"admission ticket" without motivation or recognition for "advancement of
the radio art" (our chartered purpose). This scenario has been tried on
11m, and the results are there for everyone to see.

What I'm saying, is to consult the real deal. I don't know if MCW is allowed on HF. I design microwave transeivers and radars for a living. Once in a while I'll listen to the ham bands on a shortwave Rx.

I am constitutionally against ANYTHING the ARRL puts out...simply because they violate people's rights in the name of Hamdom. The FCC isn't going to care what the ARRL Rule book has to say if they nail your butt on something.

Too bad you don't have any insight. There is more to Federal Legislation than Part 97. THere is more to the Constitution of the United States than Part 97. In fact, the Constitution over rides Part 97.

There are several suits against the FCC in Federal court in my area, because the amateur radio community has discriminated against people in the name of the FCC (VEs for one). All it took was for one VE to deny testing to a black guy, who was willing to sue, and now a Federal Judge may force the FCC to start enforcing. The FCC may have to get rid of the VE system all together depending how far up the food chain of Appeals it goes.

So, this is one example of the Nazis infiltrating Hamdom in the name of Part 97. Part 97 isn't going to save them now.

Well, I guess I missed that episode. I suppose that the unnamed actor is not currently under indictment for assault, accessory to attempted murder, attempted murder-for-hire or some other crime because of the same Conspiracy, right? By any chance -- was Oliver Stone the guest producer for that night's TONIGHT SHOW? :-) In my experience, it seems that people tend to blame unseen conspiratorial forces for their personal problems since it's easier to do that than to accept responsibility for their present situations. Which CMOS technology?
The 4000 series parts will sink enough current to easily light an
efficent LED at 5V. Parallel more gates if you have any left over and
you can increase the current capability proportionally.

The HC versions or low voltage CMOS parts are a different thing. Look
closely at their sink versus source current ratings and set up your load
(the LED) accordingly.

Ummm. No.

You can be _completely_ ignorant of all issues having to deal with antennas
and still get your ham license. You can still be an Extra. You cannot
remain totally ignorant of code (a much less important topic) and become even
a Tech+. This is absurd. Mark

That's EXACTLY where I was going! I just didn't want to be the first one to say it. As for history, history has to be a choice. I restore antique radios in my spare time, because I work with computers and radars all day long. I fear that in another 10 years, people won't know what AM/Tube/Mono radios are.

I certainly can't force anyone to recognize historical events. Appearantly, even Bill Clinton is having problems with that.

I am however, all for revamping the theory, and especially for getting rid of the "near" open book testing. The only way you can fail, is if you forget the book to the open book test. How much more "dumbing down" can that be?

I also know that there is still a legitimate need for CW. When I was in the Air FOrce, I was required to learn 10wpm for two reasons: 1) to assure the proper operation of navigational becons. Becons still use it. 2) to assure access to the National Defense Emergency Plan. Cw is still recognized in the military as a viable "back-up".

SB DX @ WW $OPDX.392
Ohio/Penn DX Bulletin No. 392

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 392
BID: $OPDX.392
January 18, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, K1XN & Golist, WB2RAJ/WB2YQH & The 59(9) DXReport, W4NF, AA5DX, WW5L, 9A4DU, DJ5AV & DX News Letter, DL3APO, F5OIU, F6AJA & Les Nouvelles DX, G3SXW, G4BUE & DX News Sheet, JT1CD, ON4ANT, ON4UN, ON5NT, PP8EB, RN9XA, VK1TX, VK4EJ, VU2BMS and YO2LDE for the following DX information.

3A, MONACO. YL operator Laura, 3A2MD, can usually be found active on SSB most days around 21230 kHz (+/- few) at 1400z. It has been reported that she does not like tailender. By the way, she does operate CW. Check around 21027 kHz at 1345z.

5H, TANZANIA. Dave (K8MN), 5H3US, has been active this past week on 40, 80 and 160 meters. Watch between the times 0300 and 430z. Also, ONLY QSL direct to his QSL Manager WA8JOC (no bureau or E-mail QSLs).

5Z, KENYA. The "DX News Sheet" reports to look for Graham, G0VNW, who is about to be active until October, possibly as 5Z4GC. Activity will be on SSB and on all bands. QSL via WB2YQH.

9A, CROATIA (IOTA Island). Ante/9A4DU, Nick/9A6DX and Zoran/9A4NC will activate the Croatian island Mljet (IOTA EU-016) in the Adriatic Sea Coast South Group for the first time. They will use their own callsigns/p. By the time you read this, their activity should have started and will last until January 25th. Activity will be CW/SSB mostly on the upper bands. QSL via bureau or direct to their home callsign.

9N7, NEPAL. The 59(9) DXReport states 9N7AR is active on 40/15/12/10 meters CW and SSB. His length of stay is not known. QSL via JR8FEK.

AX, AUSTRALIA. Bernie, VK4EJ, reports to OPDX that he will be using the "Special Callsign" AX4EJ to celebrate "AUSTRALIA DAY" on January 26th. The special prefix is only for 1 day. The QSL route is via his home callsign VK4EJ ("OK" in any callbook). Also, look for AX1TX to be active from 1300z for this one day celebration. A special QSL will be available.

QSL via K1WY.

C21, NAURU. A CW operation from the Republic of Nauru in the Central Pacific will take place from February 27th until March 7th. Bob, G3ZEM, will sign C21ZM and Roger, G3SXW, will sign C21SX. Priority will be given to Europe where C21 is most needed and to WARC bands. The operation will be with beams and linear amplifiers. Check frequencies ending in "3", listening up 1-3 KHz. Please QSL to home call.

EL, LIBERIA. Ghis, ON5NT, reports that Mark, ON4WW now signing EL2WW, returned to Monrovia last Sunday, Jaunary 10th. He will be very busy with his job and putting up new antennas. He now has a Yaesu FT900 and a linear (TNX to Bruce, KD6WW) with him. He will be putting up a K9AY loop for listening on the low bands, and he will be active on all HF bands CW and SSB. He plans to pay a lot of attention to 160 meters. He will also have SSTV capabilities (TNX to Danny, ON4VT). This past weekend he was very active on 40/30/20/17/12 meters. Mark will be home again on holidays sometime in March. Mark will be in Monrovia for several more months. QSL via ON5NT.

ET, ETHIOPIA. There has been plenty of activity from here this past week. Stations ET3AA, ET3BN and ET3VSC were heard on various bands (including the WARC bands). The best times to check are bewteen 1300 and 1530z.

H4, SOLOMON ISLANDS (and Temotu Islands). Siegfried, DK9FN, will be active from the Solomons as H44FN (January 24-27th) before he team ups with Bernhard, DL2GAC, at Temotu (Pigeon Island, OC-065). They will be active at Temotu Island from January 28th through February 10th. Look for CW activity to be done by DK9FN and SSB by DL2GAC. Their callsigns have not been announced yet. QSL DK9FN via HA8FW and DL2GAC via his home callsign.

HC8, GALAPAGOS ISLANDS. The "DX News Letter" reports that Paul, DL6FBK, is going to Ecuador on January 18 and hopes to become active from there. He wants to visit the shack of Henri, HC8KU, and plans to operate as HC8/DL6FBK/p on CW/SSB on 40/20/15/10m from February 4-9th.

HP, PANAMA (IOTAs to be activated). Joel, F5PAC, will be on holiday here but plans to fit in some radio time as HP?/F5PAC from February 5-25th. He will try to be active from Isla Grande (NA-202), Isla Colon (NA-088), Cebaco (NA-071) and maybe Iguana (NA-203). Remember, his holiday is first and radio after. QSL via bureau.

JT, MONGOLIA. Stateside, keep an eye on 40 and 80 meters for JT1BH during the following times: 2000-2300z on 3510 (+/- QRM) and 2300-0000z on 7010 (+/- QRM). QSL via JT1BH: S.Surenjav, P.O.Box 125, Ulaanbaatar-13, Mongolia.

NEW OFFICIAL ELECTED. The Lone Star DX Association have announced the following newly elected officers: Chief Director - Jerry Smith, W5TFV; Information Director - Tom Anderson, WW5L; Activities Director - Joel Rubenstein, N5JR; and Membership Director - Martin "Sandy" Sandberg, N5NBW.

OOOPPPSS A CORRECTION. Takeshi, JI3DST, informs OPDX that he made an error on his dates in his announcement to Oki Island (AS-041) last week. Operation will be from March 20-21st, not March 20th to December 21st. Please refer to OPDX.391 for the rest of the information.

PACIFIC TRIP TO AUSTRAL AND MARQUESAS. Wulf/DL1AWI and Mat/DL5XU are now active as FO0AWI and FO0XUU from Marquesas (Nuku Hiva OC-027) until January 30th. Also, look for them to be active from the Austral (Rurutu OC-050), February 02-10th. They have two FT-890s, PA and vertical antenna for extensive lowband activity in their baggage. Most of their activity will be on 160-10 meters CW. Also, they will try to be active on RTTY and SSTV at times. QSL to the homecalls.

QSL INFO AND NEWS.......
Jacky, F5OIU, informs OPDX that he will no longer be the QSL Manager for MU0ASP and MJ0ASP as of January 1, 1999, "due to the lack of seriousness of the operator to provided logs (since July, 1998) and QSLs". ALL QSLs already sent direct will be honored by a standard QSL card, but no more confirmations will be delivered pass this date. ALL FUTURE inquires should be addressed to the F5SHQ.

John, ON4UN, UBA QSL Manager and President of UBA, reports that the "NEW BELGIUM BUREAU ADDRESS" announced in last week's bulletin by Peter, ON6KZ, is for two small regional amateurs societies in Belgium, each having a few hundred members. The announced address is NOT the address of the "OFFICIAL BELGIAN QSL BUREAU!". The official QSL bureau for Belgium is run by the UBA (IARU society) and is the only one that can guarantee that the cards will reach their destination. Cards sent to the other bureau address may reach ONLY a few hundred of the nearly 4000 active amateurs in Belgium! Most of the cards sent to the FRA will end up in a garbage can... The address of the Belgian QSL-bureau is still: ON-QSL Bureau (UBA/IARU), P.O.Box 900, B9000 Ghent, Belgium. All IARU QSL bureaus are aware of this address.

Daniel, YO2LDE, states that he has changed his U.S. stateside QSL Manager. Tony, N1NJ, will be the QSL Manager and he will be able to QSL all contacts that took place after January 1, 1997. Tony's address is: Tony Naglieri, 22 Sherwin Street, Ware, MA 01082-1020, USA (E-mail is: n1nj@samnet.net). Contact before this date should be QSLed via YO2LDE's new home address: Daniel M. Vuescu, Zadei F3-1-7, RO-1700, Resita, Romania (or via E-mail to: yo2lde@qsl.net). Remember Daniel will be going to T9 and ZA during the period of February 15th - March 5th (see OPDX.390).

QSLs for UA9-UE9, RA9-RZ9 and R9 can be obtain by Eugene Bugrimov, RN9XA, in Syktyvkar, who runs the 9th regional incoming QSL Bureau of Russia. For fast reception of QSLs from this area use the address: c/o RN9XA, P.O.Box 1229, Syktyvkar 167001, Russia

HI3/ON4ANT QSLS. John, ON4ANT, reports that QSLs for the October, 1998, operation where received from the printer. Those who send a direct QSL can expect one in the mail in the weeks to follow. Bureau cards will go out in a few months when time is available. He also mentions QSLs

for their Club contest callsign OT9E can be requested via the bureau.

Norm, K6ZDL/5, reports that he has been receiving QSLs for the following closed stations: P29FV, P29MC, AND 5T5CW. He states that he no longer has the logs (nor retained them), and these stations have been closed for over 10 years.

QSL MANAGER CHANGE. Chuck, DU3NXE, announces that Joe, W3HNK, is now his QSL Manager.

QSL ROUTE CHANGE. Ray, WH6ASW/KH2, reports to OPDX that he has dropped VK4FW as his QSL Manager. The new route is to his home address on the island of Guam. The address is: Ray Fabre', 37 Turner Rd, Nimitz Hill, Asan, Guam, 96922 USA

SPECIAL EVENT. On January 18th, from 1200-2000z, the Marconi Radio Club will celebrate the 96th Anniversary of Marconi's First Two Way Radio Transmission between the United States and Europe by operating from the original 1903 Marconi Station site at South Wellfleet, MA (on Cape Cod). The Club will be operating two stations on the 20/17/15/12/10 meters on SSB and CW. They will use the callsign "W1AA/CC". The "CC" was the callsign that Marconi used during his historic transmission in 1903. This was before the existence of the FCC. DX stations QSL via Bureau and stateside stations send a SASE to W1AA via the CBA. Check out the Web page: http://personal.tmlp.com/k1vv/w1aa/
Or search for W1AA on the Web page: http://www.qrz.com/wrad/directory.cgi

SPECIAL EVENT. Look for the station LZ100PV to be active until December 31st, to celebrate the 100th anniversary of the Bulgarian composer Pancho Vladigerov. QSL via bureau.

SPECIAL EVENT. Special event station ZW7CC will be active next week, January 22-24th, from Fort Santa Caterina, by a group of Scouts from Paraiyba. Activity will be CW/SSB on all bands. QSL via PR7RT.

VP2V, BRITISH VIRGIN ISLAND. Look for Jack/W4NF, Bill/W4RM, Cliff/W4CE and Dave/W4DAV, who are going here for the ARRL Phone Contest in March. They will be running a Multi-2 operation from Tortola.

VQ9, CHAGOS ISLANDS. Ron, AA5DX, reports to OPDX he will be returning to Diego Garcia on January 24th. He states that he should be active by the end of this month with his old callsign VQ9DX. This tour will last 4 months, but he doesn't know at this time if the entire 4 months will be spent on VQ9. QSL via his home callsign, AA5DX. Ron won't be back in the states until the end of May, so cards will not start going out until June.

VU, INDIA. Norbert, DJ9RB, is active as VU2RBQ, from a location near the Southern tip of India and has been heard on 160m (1824 and 1830 kHz) at his local sunrise and sunset. Reportedly, he is running barefoot, but with a workable signal. Activity will last until January 23rd. QSL via the bureau to the homecall DJ9RB.

ZL9CI DXPEDITION. With about a week to go, this amazing operation continues and impressively continues to rack up big QSO counts. As always, OPDX InterNet Subscribers will receive all press releases by the team and Don, N1DG, as an additional bulletin.

ZX8, BRAZIL. Look for Eduardo/PP8EB, together with some friends, to be activate for the first time from the Amazon Jungle in the Amazon State of Northern Brazil, Anavilhanas Archipelago. This is the world's largest archipelago in a river. Activity will take place April 1-4th, using the callsigns ZX8DX (SSB) and ZX8CW (CW). Look for them on 80/40/20/15/10 meters. More details are forthcoming.

>
>Curt Breneman
>KC2EBP
>

The appearance in question was on Late Night with Conan O'Brien. Alec Baldwin stood up and railed against the House Judiciary Committee, and called for the American People to go to Washington and stone Henry Hyde to death. Baldwin further suggested that the American People go to Hyde's home and murder Hyde's family.

So that there is no misunderstanding here, the key words were "stone Henry Hyde to death," and "murder his family." Baldwin's words.

The obscenity is that this is a high profile individual calling for a violent assault against not only a citizen but an Elected Official and his family. This is a federal crime. And yet no actions were taken, no retraction given, no apologies from Baldwin, NBC or the producers of Late Night, or Conan O'Brien.

It is NOT a conspiracy that Baldwin is not under indictment, Professor. It is a disgrace.

Why not BPSK which has a 6dB advantage over CW at the same
power level?

As a retired engineer, I have an extensive technical library. All of
my problem solving nowadays is "open book". Knowing where to find an
answer to a problem is just as good as knowing the answer to a problem.

What you didn't factor in is the fact that LEDs DONT need more than 2.2 volts!
So, the CMOS output High or Low will not be "correct" but it WILL drive LEDs.
(I do it all the time!)

>the FCC's table doesn't contradict the FCC's table.

Of course. The contradiction is between the ARRL's commentary and the
FCC's table. Read again what I wrote above.

Let's go through the above, step by step: You mention the FCC, then
you mention the ARRL's comments. Then I say that apparently there
is a contradiction. An intelligent person would understand that I'm
referring to a contradiction between the ARRL's comment, and the FCC
table, not between the FCC and itself.

(I'm beginning to understand now that that you're arguing for
argument's sake.)

>the subject of a pass/fail element. Why is a proficiency in an inefficient,
>slow and recreational physical skill judged more important than an important
>topic like antennas?

Ten percent of the questions on both the Advanced and Extra exams
concern antennas and feed-lines. Considering that I'm using a 19
inch piece of wire snipped from a coat-hanger for my 2m antenna,
and a random-length end-fed wire for HF, 10% might be a tad too
much emphasis...

You're correct about one thing, though - phone is inefficient and slow.
Consider all the times you've heard "say again?", dead air, and the
VOX-holding "ah"; a good number of phone QSOs plug along under 60wpm.

Unlike amateur radio, surgery is usually not considered a recreational
activity, but rather, a profession.

(Because amateur radio is designated as a service, some will say we
shouldn't view it as recreation, but I believe most of us participate
in the service for recreational purposes.)

1173. ARLS001- Riley a Robot, Amateurs Shocked

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-17 00:00:00 UTC
From: straightkey@eudoramail.com
Message-ID: <77rnlu$m2n$1@nnrp1.dejanews.com>
Source record: 153250

The FCC's Amateur Radio enforcer, Riley Hollingsworth, K4ZDH, turned up in an unexpected place January 17--at a Midas Muffler outside Gettysburg seeking spare parts ! In what could be an unprecedented move, the legal advisor for amateur enforcement within the FCC's Compliance and Information Bureau, was discovered by a ham mechanic to actually be a C3PO-class ANDROID.

"A couple of them were pretty shocked," he said. "This has never been tried before," Riley Robot said the next morning. He said he broke in on an argument that was growing increasingly nasty in an effort to settle things down, then stayed to discuss his favorite film, RoboCop, with the hams on frequency.

Riley says he thinks one key to compliance is just getting people to listen to the soundtrack of Close Encounters of the Third Kind. "Most people, if you can just get to them on a computer-to-human basis, they'll listen," he said, reflecting his overall enforcement approach to attempt to reason violators into involuntary service as snitches rather than writing them up. During his time on the air, Hollinsgsworth confronted one individual he'd already been in touch with about alleged on-air misbehavior with a threat to "vaporize him with my phaser".

Among other things, he told those on hand that noncompliance and inappropriate on-air behavior could even threaten the hobby's chances of working the first aliens via the Arecibo dish. Hollingsworth advised hams to be more tolerant and patient and to avoid confrontation or retaliation against theevil forces of the Shalala StormTroopers, Grand Moff Roth-Fuchgartt, or Darth Clinton.

"We all have to realize we're on a mission here--to save the Galaxy," he said the day after his Midas Muffler appearance. "There are going to be X-Wing fighter licenses lost and fines owed." The jammers already are well on their way to "facing down the Justice Department Death Star" right now, he said.

Even as he preached better behavior, Riley Robot says he monitored the others on frequency attempting to jam his signal. "I hope the monitoring folks were on the frequency too," he said.

But then again, if the advanced is so easy, why don't they
just take it the following week or whenever
the next exam date is? After all, if it is so easy AND it
is only one element that needs be passed.

But don't you get it Bill it is so easy so nobody bothers
with it? The whole fault of why so few upgrade to advanced is becuase
there is No Code requirement involved. For this reason all good Code
loveing hams avoid it like the plauge unless they decide to go for
the exhalted status of Extra class, in which case it becomes something
to hold ones nose through.

The one thing that turely frightens me about the above remarks
is that I really do need to mention that I am being sarcastic. After
all somebody might think I had become a ProCoder

But the one test at a time arguement is rather lame. After all
the Techs all seem to manage to take and pass the thier two tests on
the same day. Surely those people who have been obtained the exhalted
result of Code tested can manage what the Techs they affect to despise
all seem to manage.

The real reason people don't upgrade beyond general they don't
see the need or are too lazy. Of course it can't be the later, since
we all KNOW that Code testing weeds out the lazy from the ARS

>Would you know of any electronics store which carries that kind of adaptor?
>Thanks,Valerie.

Well, Valerie, I see it's not just me Yaesu is difficult with. Since you're
just missing the short adaptor, you're in luck. It doesn't have any special
electronics in it, Edward's response notwithstanding.

Unfortunately, the special four-conductor male mini-plug IS nearly
impossible to find. A source for them has been mentioned in this newsgroup,
though I didn't write it down. I recall a price being mentioned of around
$5. You might search through the archives.

Sorry I can't be more helpful, other than to tell you there is a solution.
Good Luck!

Prof:

Surely, as an educated person (as I am), you can see the problem with ham testing as it is today? Would you ever support the idea that your students NOT learn something, but rather you give them a copy of your mid-term for them to memorize? Do you at all see anything wrong with this approach?

As an Electrical Engineer, I had no problem studying for, and passing tests not based on memorizing the answers. I don't beleive that the information required to learn is beyond the conception of those with no electrical experience. However, I generally feel that people fail to learn anything by memorizing the answers. Perhaps if we got rid of the ANSWER POOL, then we would have the idiots we now have on ham radio.

It's pretty bad when a General Class asks me what the offset for simplex is. It's even worse when an Extra Class askes me how long the wavelength is for 2 meters.

You'd think that would end the discussion...

>I will also tell you that MCW, as I mean it (an emission type allowed under
>'Phone'), IS allowed below 50 MHz in the sub bands where all the emission
>types defined as 'phone' are allowed. I have already cited ARRL's 'The FCC
>Rule Book Guide to the FCC Regulations'.

Which apparently contradicts the FCC's table of authorized emissions.
If the FCC permitted MCW on HF, then they would have explicitly written
"MCW" in their table. Don't trust someone else's interpretation (in this
case, whomever wrote that ARRL commentary) of the law.

The antenna/feedline questions amount to 10% of the Advanced and Extra
class exams. You could miss all such questions and still pass the written.
You could also miss 10% of the questions on the code test and still pass
it. Both exams have a cut-off at 70%.

Thanks but I think you did the best job of describing Burp. Here's a
short piece from someones web page where they describe Burp's behavior
in one of the divorce newsgroups, he's not exactly _loved_ there
either.

"Recently there is one man, Burt Fisher, from Massachusetts who is
currently the antagonizer, or at least
the person responsible for pushing the issue of his marital history
and continues to offend some and rally
others, clearly creating two groups pitted against each other and even
creating squabbles within these
groups. There are also those people who choose to stay out of the
discussion completely."

I am happy to join with you today in what will go down in history as the greatest demonstration for freedom in the history of our nation.

Six decades years ago, a great American, in whose symbolic shadowwe stand today, signed the Communications Act of 1934. This momentous decree came as a great beacon of hope to millions of slaves, who had been seared in the flames of whithering injustice. It came as a joyous daybreak to end the long night of their captivity. But sixty years later, the coded Amateur is still not free. One hundred years later, the life of the coded American is still sadly crippled by the manacle of segregation and the chains of discrimination.

One hundred years later, the coded Amateur lives on a lonely island of frequencies in the midst of a vast ocean of phone operators. One hundred years later, the coded Amateur is still languishing in the corners of American society and finds himself an exile in his own land So we have come here today to dramatize a shameful condition.

In a sense we have come to Gettysburg to cash a check.

When the architects of our great republic wrote the magnificent words of the Constitution and the Declaration of Independence, they were signing a promissory note to which every Amateur was to fall heir.

This note was a promise that all hams, yes, code men as well as phone men, would be guaranteed to the inalienable rights of life liberty and the pursuit of happiness.

It is obvious today that FCC has defaulted on this promissory note insofar as her citizens of code are concerned. Instead of honoring this sacred obligation, Amateurs have given coded people a bad check, a check that has come back marked "insufficient frequencies."

But we refuse to believe that the bank of justice is bankrupt. We refuse to believe that there are insufficient frequenciess in the great vaults of opportunity of this nation. So we have come to cash this check, a check that will give us upon demand the riches of HF and security of justice.

We have also come to his hallowed spot to remind America of the fierce urgency of Now. This is not time to engage in the luxury of cooling off or to take the tranquilizing drug of restructuring.

Now is the time to make real the promise of democracy.

Now is the time to rise from the dark and desolate valley of segregation to the sunlit path of radio justice.

Now is the time to lift our nation from the quicksands of radio injustice to the solid rock of brotherhood.

Now is the time to make justice a reality to all of God's children.

It would be fatal for the FCC to overlook the urgency of the moment and to underestimate the determination of it's coded citizens. This sweltering summer of the coded people's legitimate discontent will not pass until there is an invigorating autumn of freedom and equality. Nineteen ninety-eight is not an end but a beginning. Those who hope that the coded Amateurs needed to blow off steam and will now be content will have a rude awakening if the nation returns to business as usual.

There will be neither rest nor tranquility in America until the coded citizen is granted his citizenship rights. The whirlwinds of revolt will continue to shake the foundations of our nation until the bright day of justice emerges.

We can never be satisfied as long as our bodies, heavy with the fatigue of QRM, cannot gain lodging in the shacks of the highways and the radio rooms of the cities.

We cannot be satisfied as long as the coded person's basic mobility is from a smaller ghetto to a larger one.

We can never be satisfied as long as our children are stripped of their selfhood and robbed of their dignity by signs stating "for phone only."

We cannot be satisfied as long as a coded person in Mississippi cannot CQ and a coded person in New York believes he has nothing for which to CQ.

No, no we are not satisfied and we will not be satisfied until justice rolls down like waters and righteousness like a mighty stream.

I am not unmindful that some of you have come here out of your trials and tribulations. Some of you have come from areas where your quest for towers left you battered by storms of persecutions and staggered by the winds of zoning boards.

You have been the veterans of creative suffering. Continue to work with the faith that unearned suffering is redemptive.

Go back to Mississippi, go back to Alabama, go back to South Carolina go back to Georgia, go back to Louisiana, go back to the stations of our modern cities, knowing that somehow this situation can and will be changed.

Let us not wallow in the valley of dispair. I say to you, my friends, we have the difficulties of today and tommorrow.

I still have a dream. It is a dream deeply rooted in the American dream.

I have a dream that one day this FCC will rise up and live out the true meaning of its creed. We hold these truths to be self-evident that all men are created equal.

I have a dream that one day out in the red hills of Georgia the sons of former hams and the sons of former broadcasters will be able to sit down together at

the table of brotherhood.

I have a dream that one day even the state of Mississippi, a state sweltering with the hot air of phone, will be transformed into an oasis of CW only.

I have a dream that my four little children will one day live in a nation where they will not be judged by their use of code but by their character.

I have a dream today.

I have a dream that one day down in Alabama, with its vicious racists, with its governor having his lips dripping with the words of interpostion and nullification; that one day right down in Alabama little CW boys and CW girls will be able to join hands with little phone boys and phone girls as sisters and brothers.

I have a dream today.

I have a dream that one day every valley shall be engulfed by towers, every hill shall be exalted and every mountain shall be made low, the rough places will be covered with Beverages and the crooked places will be made straight and the glory of the Lord shall be revealed and all flesh shall see it together.

This is our hope. This is the faith that I will go back to the South with. With this faith we will be able to hew out of the mountain of despair a stone of hope.

With this faith we will be able to transform the jangling discords of our coax into a beautiful symphomy of brotherhood.

With this faith we will be able to work together, to CQ together, to struggle together, to go to jail together, to climb up for freedom together, knowing that we will be free one day.

This will be the day when all of God's hams will be able to sing with new meaning "CQ 75 ! HELLO CQ HELLO CQ 7 5"

And if America is to be a great nation, this must become true. So let CQ ring from the hilltops of New Hampshire. Let CQ ring from the mighty mountains of New York.

Let CQ ring from the heightening Alleghenies of Pennsylvania.
Let CQ ring from the snow-capped Rockies of Colorado.
Let CQ ring from the curvacious slopes of California.

But not only that, let CQ, ring from Stone Mountain of
Georgia.

Let CQ ring from every hill and molehill of Mississippi and
every mountainside.

When we let CQ ring, when we let it ring from every tenement and every ham, from every state and every city, we will be able to speed up that day when all of God's children, black men and white men, Jews and Gentiles, Pro Code

and No Code, will be able to join hands and sing in the words of the old spiritual, "Free at last, free at last. Thank God Almighty, we are free at last."

Amateur Radio License's and Free Speech are oxymoron's. They dont belong together. When a person signs up for a ticket they are pledging themselves to the rules of that ticket. Sometimes those license rules suppress free speech. When a person signs up for a drivers license or any other license, they relinquish a certain amount of free speech. Civilized society demands rules. Sometimes those rules quell free speech. I have no respect for an Amateur that pledges himself to behave a certain way in order to acquire a license and then turn around and cry foul because of the lack of "free speech" once he has his license.

If these people are true champions of "free speech" let them put their actions where their mouth is.......turn in their tickets and then broadcast without them.....................once done, they might get some respect for their actions and beliefs from others.

ARRL BOARD MEETS IN HOUSTON

The ARRL Board of Directors gathers Friday and Saturday, January 15-16, in Houston, Texas, for its 1999 annual meeting. Expected to be discussed are issues dealing with the future of Amateur Radio, FCC amateur enforcement, and repeater frequency coordination.

The Board also will elect members to the Executive Committee and directors for The ARRL Foundation. Additionally, Board members will hear reports from committees, HQ management, and individual Board members.

New Radio Amateurs of Canada President Patrick Doherty, VE3PD, also is scheduled to address the ARRL Board.

Details on the ARRL Board meeting will be transmitted in an ARRL bulletin and posted on the ARRL Web page, http://www.arrl.org/.

FCC OFFICIAL MEETS HAMS ON THEIR OWN TURF

The FCC's Amateur Radio enforcer, Riley Hollingsworth, K4ZDH, turned up in an unexpected place January 13--75 meters! In what could be an unprecedented move, Hollingsworth, legal advisor for amateur enforcement within the FCC's Compliance and Information Bureau, showed up on 3894.5 kHz to discuss enforcement and encourage compliance.

"A couple of them were pretty shocked," he said. "This has never been tried before," Hollingsworth said the next morning. He said he broke in on an argument that was growing increasingly nasty in an effort to settle things down, then stayed to discuss enforcement with the hams on frequency.

Hollingsworth says he thinks one key to compliance is just getting people to listen to what he has to say. "Most people, if you can just get to them on a one-to-one basis, they'll listen," he said, reflecting his overall enforcement approach to attempt to reason violators into voluntary compliance rather than writing them up. During his time on the air, Hollinsgsworth confronted one individual he'd already been in touch with about alleged on-air misbehavior.

Among other things, he told those on hand that noncompliance and inappropriate on-air behavior could even threaten the hobby's HF allocations. Hollingsworth advised hams to be more tolerant and patient and to avoid confrontation or retaliation.

"We all have to realize we're on a mission here--to save Amateur Radio," he said the day after his 75-meter appearance. "There are going to be licenses lost and fines owed." The jammers already are well on their way to "hanging themselves" right now, he said.

Even as he preached better behavior, Hollingsworth says he understood from the others on frequency that someone was attempting to jam his signal. "I hope the monitoring folks were on the frequency too," he said.

Hollingsworth advised the hams on 75 to contact him with enforcement problems, and he gave out his e-mail address and telephone number (rholling@fcc.gov; 717-338-2502). "I don't know what effect it will have," he said of his on-air foray. Hollingsworth says he'll "do what it takes" to improve amateur compliance, and that could include future on-air visits with amateurs.

"I've gotten a lot of feedback this morning by phone and e-mail asking me to do it more often," he said. "We'll be listening more and asking to be allowed in QSOs more."

Hollingsworth, who's based in Gettysburg, Pennsylvania, took over the FCC's most recent Amateur Radio enforcement initiative last September (see related story, below).

FCC WARNS ALLEGED MAJOR AMATEUR OFFENDERS

The FCC has issued strong warnings to two amateurs in Indiana and a third in New York who are on the Commission's top ten list of alleged major amateur offenders. The FCC's amateur enforcement point man, Riley Hollingsworth, K4ZDH, says the warning letters sent earlier this month are the last step before the FCC initiates formal enforcement proceedings. One case primarily involved malicious interference on VHF repeaters, while the other two involved interference to an HF net.

"We have been cutting bait a while, now it's time for us to fish," said Hollingsworth, the legal advisor for enforcement within the FCC's Compliance and Information Bureau.

The FCC did not make the names or call signs public, but Hollingsworth said all those who received the letters were put on the FCC's Alert List with FCC field offices. "The Alert List is the FCC equivalent of an all-points bulletin," Hollingsworth explained. He said Field Office monitors would be making a special effort to listen for further violations by stations on the Alert List.

Since taking over Amateur Radio enforcement within the CIB last fall, Hollingsworth says he's sent out dozens of warning letters of a much milder nature. "Now, we're distilling that activity to the worst offenders," he said of the latest epistles. Hollingsworth indicated that similar actions were imminent in other major cases of alleged amateur rules infractions. He also said he has sent out another three dozen or so routine warning letters "generally based on a collection of complaints received over the holidays."

The letters sent out January 7 and 8 spell out the agency's expectations in no uncertain terms. In the case of the alleged HF offenders, Hollingsworth's letters state that the Commission "has additional evidence that you have been deliberately and maliciously interfering with the operations of other licensed amateurs," primarily a 75-meter net. Both hams--whose cases are related--already had received official Notices of Violation last fall for similar conduct, and the FCC had imposed restricted operating hours on one of them. But the FCC says that the troublesome behavior has continued.

Hollingsworth said the alleged illegal activities not only put the hams' licenses in jeopardy but open them up to possible fines and even put transmitting equipment at risk of seizure. He said he also has cautioned the controllers of the net involved to not engage hecklers or those attempting to harass or interfere, nor to call up the net on a busy frequency. "One thing these nets have to understand is that the nets don't own the frequency," he said.

The case of the alleged VHF offender had a similar pattern. The amateur license of the ham in question already had been suspended at one point, but violations are said to have continued, even during the suspension period. Beyond amateur violations, Hollingsworth said that the FCC's evidence indicated the amateur had threatened FCC employees and others. He told the ARRL that additional warning letters went out to eight other individuals whom he described as "cohorts" to the alleged prime VHF offender.

Hollingsworth requested that all of the amateurs contact him immediately to discuss the allegations. After a lengthy telephone conversation with one of them, Hollingsworth expressed optimism that the situation would be resolved.

In an unrelated case, Hollingsworth recently mailed warning letters to six individuals in the Pittsburgh, Pennsylvania, area regarding alleged malicious interference on VHF.

ZL9CI DXPEDITION RACKS UP THE Qs!

The Kermadec DX Association's ZL9CI Campbell Island DXpedition has a good head start on the way to topping the QSO record set a couple of years ago by the Heard Island VK0IR DXpedition. In its first seven days, the crew at ZL9CI racked up some 45,000 contacts to the delight of hams around the world. During two weeks in January 1997, the VK0IR DXpedition set a new world's record by logging more than 80,000 contacts. The ZL9CI DXpedition to Campbell continues through January 24, with activity on all HF bands--CW, SSB, and RTTY.

"Even though the solar flux is around 120, the team is astonished by the massive pileups," a January 9 team news release declared. "The CW members of the team are working over 200 per hour on a regular basis."

Operators at ZL9CI include well-known US CW contester and DXer Trey Garlough, N5KO (ex-WN4KKN). Others are Team Leader Ken Holdom, ZL2HU; Lee Jennings, ZL2AL; Brian Biggings, VE3XA; Declan Craig, EI6FR; Wilbert Knol, ZL2BSJ; Jun Tanaka, JH4RHF; Andrew Williamson, GI0NWG; Jason Christensen, ZL2URN; James Brooks, 9V1YC; and Murray Woodfield, ZL1CN. Four regional "pilot stations"--including two in the US--have been coordinating activities on the outside.

Logs are available on the Internet, so stations can check to see if they are, indeed, "in the log." The team says that one of its objectives is to give "everyone, in every country, that elusive 'new one.'" The team notes that "100 W trap vertical stations" are being as successful as the big guns and adds, "We try to work everyone on an equal basis."

QSL to Kermadec DX Association, PO Box 56099, Tawa, New Zealand. See the ZL9CI Web site for QSLing details and for ZL9CI logs at http://www.qsl.net/zl9ci/.

ARRL E-MAIL ADDRESSES TO BE AVAILABLE TO MEMBERS

ARRL members soon will be able to announce their ARRL membership through their e-mail addresses! Starting February 1, 1999, a new membership service will be available for those wishing to have an ARRL e-mail address, and you won't have to switch e-mail services to do it. Not only that, but it will be free-of-charge to League members!

The new, personalized League e-mail addresses will consist of the member's call sign @arrl.net. Electronic mail sent to the address automatically will be forwarded to any e-mail account you choose.

As long as you remain an ARRL member, you'll never have to notify people of an address change--even if you change Internet service providers.

As soon as the service becomes available, members will be able to sign up quickly and easily through the ARRL Members Only Web Site. If you are not already registered for the Members Only Web Site, you can do so at http://www.arrl.org/members/.

ARRL ANNOUNCES NEW AWARD FOR PROFESSIONAL JOURNALISTS

The ARRL has announced a new award to honor the best news story that reflects the enjoyment, importance, and public service value of Amateur Radio.

The yet-to-be named award will succeed the ARRL Media Excellence Award, which last year went to Sam Brown, WA4IUM, for his long-time promotional work for Amateur Radio as a television news anchor.

Unlike the long-running McGan Silver Antenna Award that rewards volunteer publicity efforts, the new award will go to a professional in print, radio, television, video, or multimedia. The winner will receive a plaque and $500. Groups are eligible, and group entries are welcome, but only one prize will be awarded.

The deadline to enter is October 1, 1999. Nominees will be judged by members of the League's Public Relations Committee. Posters announcing the new award are being distributed to newsrooms throughout the country. Entry forms are available upon request from the ARRL Public Relations Department.

For more information, rules for entry, and nomination forms, contact ARRL Public Relations Manager Jennifer Gagne, N1TDY, at 860-594-0328 or jgagne@arrl.org.--Jennifer Gagne, N1TDY

PANSAT PO-34 SATELLITE "OPERATING WELL"

The PANSAT PO-34 satellite "appears to be operating well," according to PANSAT team member Dan Sakoda, KD6DRA, but he expressed some concern about battery life. "Basically, the temperatures are a bit lower than we expected, and some of our thinking as far as battery charging were less than optimistic," he explained. "The concern is that we really need to baby the batteries if we're going to have a long mission life."

PANSAT--the Petite Amateur Navy Satellite--was launched over Australia October 30 from the space shuttle Discovery. The 150-pound Amateur Radio satellite carries a spread-spectrum communication package fabricated by student officers and faculty members at the Naval Postgraduate School here as an educational project and a means of demonstrating spread-spectrum communication. The spacecraft will provide store-and-forward digital packet communication using direct-sequence spread-spectrum modulation. Hams on the ground will be able to utilize PANSAT via a bulletin-board type user interface.

Sakoda said now that ground operations are somewhat under control, "the two main staff engineers here can focus on spread spectrum work and pushing for Amateur Radio user access." He said the project's Amateur Radio goal is to "first provide a spread spectrum beacon of sorts, to download at least PANSAT's call sign or some message" that would at least users to receive a

signal, "without derailing the work toward a full spread spectrum BBS service."

Sakoda noted that he has added two-line element sets to the PANSAT home page http://www.sp.nps.navy.mil/pansat. Click on PANSAT TLE. The site also contains new photos showing the deployment of the satellite from the space shuttle. "All of us here on Team PANSAT at NPS are looking forward to the Amateur Radio community's involvement with PANSAT," he said.

YV5AMH ELECTED TO ANDEAN PARLIAMENT

IARU Region II Vice President Reinaldo Leandro, YV5AMH, was recently elected as a member of the Andean Parliament. The regional parliament, comprised of the Andean Pact countries of Venezuela, Colombia, Ecuador , Bolivia and Peru, meets twice yearly in its official seat of Bogota ,Colombia. The Andean Parliament on a smaller scale, is similar to the European Parliament of the European Union countries.

Leandro--a well-known and respected active DXer and contest operator from Caracas--is president of the Radio Club Venezolano. His professional career has been spent as a diplomat in the Venezuelan Foreign Ministry. Most recently he was the Venezuelan ambassador to Argentina.

With these credentials, in his capacity an officer of IARU Region II, Leandro is considered eminently well-qualified to watch closely over emerging telecommunications issues brought up by this group of countries which are also striving to broaden its economic and political union.--IARU Region II News Service

SOLAR UPDATE

Solar swami Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down over the past week. Average sunspot numbers were off 26 points, and average solar flux was down nearly 40 points from a week earlier. We are now in the middle of Month 28 of solar cycle 23, and for the rest of this month activity should be up.

Solar flux bottomed out at 110.3 on January 10, but this weekend the predicted solar flux, January 15-17, is 150, 160 and 170. Planetary A index for those three days is predicted to be 12, 9, and 9. Look for solar flux values to stay above 150 almost until the end of this month.

The last two days have had fairly active geomagnetic periods. This was probably due to a disappearing solar filament on January 9.

Scott Craig reports a couple of minor bugs in his solar plotting program. The fix is in version 3.05 on his Web page, http://edge.net/~scraig/sol.htm. One bug involves starting with very small data files; the other is with taking data from these bulletins via Netscape.

ZL3TIC reports lots of activity on 6 meters on January 11 and 12, with many JA and VK calls worked. With the geomagnetic activity the past two days some North American hams reported working many 6-meter stations around the continent via aurora. N0VSB in Colorado worked a long list of Pacific

Northwest 6-meter stations on January 7.

Sunspot numbers for January 7-13 were 125, 99, 70, 62, 46, 66, and 77, with a mean of 77.9. The 10.7-cm flux was 115.1, 115.5, 114.8, 110.3, 111.9, 112.8, and 118.6, with a mean of 114.1. The estimated planetary A indices were 6, 14, 8, 4, 4, 6, and 28, with a mean of 10.

FLORIDA SKIP FOUNDER ANDY CLARK, W4IYT, SK

Andy Clark, W4IYT, a veteran Amateur Radio editor and public service leader in South Florida, died December 31, 1998, after a long battle with cancer. He was 75 and a Life Member of the ARRL. Clark was first licensed in 1939. In 1957 he founded and edited Florida Skip, a monthly newspaper dedicated to ham radio activities in Florida that he published out of his Miami Springs home. At its peak, Florida Skip reached approximately 5000 subscribers. Following a stroke in 1992, Clark sold the publication, now CyberSKIP Digest, to Gerry Wentz, KC4EHT.

Clark was a leader in emergency communications. He was SEC of the former East Florida section of the ARRL, and EC of Dade County for 25 years before retiring from that job after Hurricane Andrew devastated South Florida. He created emergency stations for the Red Cross, the National Hurricane Center, and the City of Miami Springs. He was trustee of W4EHW at the National Hurricane Center and of the Miami Springs Radio Club, K4OSQ. Along with George Thurston, W4MLE, he authored several books on emergency preparedness and traffic handling.

The City of Miami Springs designated December 14, 1998, as Andy Clark Day, in recognition of his nearly 50 years of service to his community and his hobby. Clark is survived by his wife Betty, W4GGQ, a son Andy Lee, KA4MHL, five daughters, and three grandchildren.--thanks to Sandy Donahue, W4RU, for this information.

IN BRIEF:

* This weekend on the radio: The North American QSO Party (SSB) is January 15-17. See January 1999 QST, page 84, for details. Just ahead: The ARRL January VHF Sweepstakes is January 22-24. See December 1998 QST, page 96, for details.

* Vanity update: The FCC in Gettysburg has very nearly worked its way through the last of the 1998 vanity applications. The vanity program continues to be very popular. During December, the FCC reports it got 1468 vanity applications, all but 248 of them filed electronically. The FCC reported January 13 that it had processed applications received through December 29. In the latest processing run, it granted 213 applications and shunted another 255 into the work-in-process or WIPs stack.

* Marconi special event: On January 18, 1200-2000 UTC, the Marconi Radio Club will celebrate the 96th Anniversary of Marconi's first radio communication between the United States and Europe by operating from the

original 1903 Marconi Station site at South Wellfleet, Massachusetts, on Cape Cod. The Club will operate two stations on 20, 17, 15, 12, and 10 meters, SSB and CW, using the call sign W1AA/CC. "CC" was the call sign Marconi used in his historic 1903 transmission--well before the existence of the FCC. DX stations should QSL via the bureau; stateside, include an SASE to W1AA at the database address.--Whitey Doherty, K1VV/W1AA

* QSLing up: Ham radio numbers may be off, but DX QSLs are up, probably due to improved propagation. The ARRL QSL Service reports it handled 1,596,740 QSLs during 1998, including cards to incoming US bureaus. This is a 15% increase (218,500 cards) from the 1997 total.

* FCC chairman, commissioners, relocate: The offices of FCC Chairman William Kennard and of Commissioners Susan Ness, Harold Furchtgott-Roth, Michael Powell, and Gloria Tristani have relocated to the Commission's new headquarters at The Portals, 445 12th St SW, Washington, DC 20554. The chairman and commissioners will be on the eighth floor of the building. Telephone, fax, and e-mail addresses remain the same.--FCC Public Notice

* Waiting for K2: Elecraft has announced that it will start taking orders for its K2 HF transceiver kit starting January 25. The K2 debuted at the 1998 Dayton Hamvention to the delight of many in the QRP community. Elecraft says it will post an order form on its Web page (http://www.elecraft.com) that buyers can either mail or fax. Customers on our Priority List will receive product first, followed by new orders," Elecraft said. Two factory-assembled "beta" units have been circulating among hams to smooth out any wrinkles. Another 100 K2 kits were to go out to field testers late last year. The Elecraft K2 transceiver is expected to sell for $549 for the basic CW unit. Adding SSB capability will cost another $79.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

Curt--

Perhaps we can agree to disagree. I fear that what might seem relatively easy to those of us who deal with complex material (I am a tax lawyer and I still get nightmares about an organic chemistry course I took in college-benzene rings, etc. etc.) or to those of us with technical backgrounds might be very hard to master for many otherwise good hams.

I heard a young ham on the repeater the other day offering to sell his HF gear because he could not pass the code test. I suggested that he could learn 5 wpm by rote memory and count the dots and dashes and tried to explain that 5 wpm was going to be all he would need to get on 10M phone which is opening up worldwide and, perhaps soon, all bands. I was shouted down by a code fanatic who suggested the young man was just lazy--I think we have lost another ham which I think is unfortunate.

We are not building rockets here--this is a hobby, just like stamp collecting. I am involved in other hobbies--flying, scuba, sky diving-- that gear their tests to safe participation not as an artificial barrier to keep people out. Btw, you are doing great with that vertical ! you are certainly no less of a ham because you don't have 300 plus countries worked on stacked monobanders on 100 foot towers running 1500 watts++++ (the self-appointed "serious" hams).

Best, Andy K5VM

If no code amateurs get along fine without it, they probably don't need
any steenking HF then. Waivered hams have a documented disability. The
rest of the human race--at least those who have no intention of
obtaining an HF license--I don't care whether they know morse or not.

Ah, yes! The mentality of the DXers is of a breed in themselves. According to the DXer mentality, YOU ARE NOT ALLOWED TO HAVE A NORMAL CONVERSATION ON HF. You are only allowed to trade:

1) QSL Card
2) 10-10 Number
3) QTH
4) Rig
5) Antenna
6) Name (only if absolutely necessary)
7) RST
8) Call Signs (can't forget that one)
9) Weather report

Any deviation from the above should result (according to the DXers) in decapitation. Then, there are two types DXers; the good ones, and the bad ones. The Bad ones don't participate in CONTESTING!!

Further, according to the DX mentality, one MUST SPEND A MINIMUM OF $8,970,450.00 on their station to "bust pile-ups".

And lastly, the DXers believe that the above constitutes a QSO. Any "QSO" that involves actual conversation is considered "windbagging".

Andy,

I think that you have a good point. There should be a way to prevent
losing potential young hams by the mechanism you described. Let's all
just enjoy it and try to preserve it for the future.

Thanks for an enjoyable debate.

Dear Huggy,

OK, OK, you don't have to become a ham. Please DON'T learn it. In fact, PLEASE don't become a ham if it will make you so unhappy. Is there someone forcing you to?

But, ham or no ham, learning is something you will have to continue to do throughout your life. Especially these days, school is never out! Without college, your choices will be limited. If you do go through college and find employment, guess what? Your employer will expect you to continue to learn, learn, learn or you will be fired, fired, fired. You will be expected to learn lots of stuff you don't like, too.

Who's "we." Are you the spokesperson for all of the younger generation? I have a feeling that many young people would resent your comments that you say young people aren't interested in learning. I have spent many of the recent decades of my life working with and for professional people in their 20s who learn, learn, learn and also, by the way, have a life, too!

This is not an angry response. It is a warning that you better take a deep breath and think about changing your attitude or you will not have a very unfulfilling life. You don't sound very happy now, in fact.

By the way, I'm 52, not 60-90, but I hope to make it there. I'm just curious. Please indulge me. At what age does your definition of jerkdom start and will

you be a jerk when you reach that magic age boundary or do you expect to remain at your current age?

Bye Bye and have a Nice Day!
dididididahdidah forever :-)

Hi,

I have 3 MT1000 pkgs. for sale. Radios are UHF mid split, 8 channel, H44GCU7180AN model #, stubbies, beltclips, excellent condition! In following configurations:

1 ea. MT1000, sp/mic, charger, battery..... $240

1ea MT1000, charger, battery..... $225

1ea MT1000, 3 batteries..... $200

Please contact via email.. Radios are guaranteed not DOA and in excellent condition. Shipping not included. (if u want all, or 2, I'll ship) No clue on the batteries as date codes are around 96-95, but they seem to hold a charge ok. Prepayment with postal money order, and can offer more info to the serious inquiries. Sorry, no programming available on these, but there are some matching 463.xxx channels in a couple.... as always, thanks for the time and bandwidth!
Randy, KC8CPK, KAG0900

And.... Your point is.... What?

Seems to me that the Constitution guarentees freedom of speech. I guess
that means if Nazis want to get on 75 meters and hold a skin-head net, the
Constitution guarentees that.

>There are several suits against the FCC in Federal court in my area, because
>the amateur radio community has discriminated against people in the name of
>the FCC (VEs for one). All it took was for one VE to deny testing to a black
>guy, who was willing to sue, and now a Federal Judge may force the FCC to
>start enforcing. The FCC may have to get rid of the VE system all together
>depending how far up the food chain of Appeals it goes.

Seems to me that if a VE refused to test a candidate, the candidate should
contact the VEC responsible for the VE, and file a formal complaint. One
which, if the scenario you present is accurate, would on the face of it
get the VE's testing credentials revolked. More often than not, though, we
find out there is more to the story -- like the person is a known
troublemaker, disrupts testing sessions, etc., in which case the VE is
within his/her privilege not to test the person, so that others they are
testing will have an amicable environment.

>So, this is one example of the Nazis infiltrating Hamdom in the name of Part
>97. Part 97 isn't going to save them now.

But, you still haven't shown me how code testing is supposed to keep the
Nazis off 75 meters, which was what you originally claimed in your
previous post.

As a VE myself, I see people fail all the time. Not
everyone starts out to become a ham with a full
background in electrical technology or even basic science
and physics.

>I also know that there is still a legitimate need for CW. When I was in the

>proper operation of navigational becons. Becons still use it. 2) to assure
>access to the National Defense Emergency Plan. Cw is still recognized in the
>military as a viable "back-up".

How long ago has it been since you were in the military.
Truth is that CW is NOT recognized by the military as
a viable back-up anymore at all. The only code related
training anyone can identify is for certain communications
techs that monitor transmissions of other countries. They
are RECIEVE only trained as far as anyone has ever
made known here. Otherwise, there is NO military
training at all anymore for morse code knowledge and use.
AND, even if the situation was as you claimed above, just what
would such a need impose on the ham community as far as
knowledge of CW is involved?

Cheers,
Bill K2UNK

:
:Let's go through the above, step by step: You mention the FCC, then
:you mention the ARRL's comments. Then I say that apparently there
:is a contradiction. An intelligent person would understand that I'm
:referring to a contradiction between the ARRL's comment, and the FCC
:table, not between the FCC and itself.

Forget that I mentioned the ARRL Guide! It's obviously getting in the way.

:(I'm beginning to understand now that that you're arguing for
:argument's sake.)

If you say that MCW can in no way be used below 50 MHz, then you are wrong. That's all I'm saying. I would also say that the General Class, Advanced Class and the Amateur Extra Class are the ones with this privilege. This is unfortunate because the intent of this emmision type is 'for providing telegraphy practice interspersed with speech' (that's from Part 97) which should obviously be granted to the Novice Class and Tech Plus Class.

This is not a argument for argument sakes. It is for the purpose of pointing out some of the dubious privilege granting that takes place in the American licensing system.

I can say as an active engineer, that taking a test from an "ANSWER POOL" is not acceptable.

If another member of my team had to go to a book to figure out the offset for simplex, he/she wouldn't be on my team anymore.

I have Extra Class operators asking such questions.

I have had an FT-900/AT in my Jeep for the last 3-4 years with no problem. I found it helpful to install an amplified speaker.

I use mostly CW. I have the keyer speed set abt 15 wpm, so I can space the letters out when working a slower station. I leave the CW position in QSK, so when I switch from SSB to CW I don't need to reach the rig.

I have the control head on a goose neck on the shift console, and the RF body mounted to the rear seat back.

I really do think you are overdrawing things esp when it comes
to recent years. The ARRL vigorously opposed the NoCode licsence and
has moved against ARRL positions on a numbers of issues, SS,and
Bandplans comes to mind right off.

The ARRL for what ever reason lacks the clout and credility
that it once had. I don't think that their recent proposals on the
structure of the ARS are really going to help that either.

Now you make the case that the reason that the FCC has been
making more of the rules on there is own because the members of the
ARS are far more deivided than at anytime in the past.

>accordingly. It is said that we are a self-policing group; we have also
>helped to shape our own licensing requirements. The "pat on the back"

There is a big difference from saying that we have helped to
make our rules and the say that they exist because that is what we
agree they should be. For that matter the various Bussness concerns
also " help" in the writing of their rules, and do so to an even
lareger extent than the ARS (as witnessed by efforts to rewrite
physics by the Celluar indutry

>you refer to does not come from the government, but from ourselves and
>from our peers who created the structure we currently live with. If we
>want amateur radio to be an achievement-driven hobby, then we should

Why should we? And you are dreaming if think the decision is
ours alone. prehaps 10-15 years ago it would have been. Indeed if the
ARRL had gone down that road on it's it might well carry the clout to
still write our own rules, but the days in which the ARS rules are
written in isolation and without reagrd to the large legal issues in
American Socieity would likely still be coming to an end, for the
simply reason that the FCC is not going to get involved in some the
legal batttles it would likely face if it tried.

Nothing about ending Code testing affect the Achievement based
hobby except in the minds of those who seek to judge a ham solely by
his/her license class. Achievement is DOING stuff not passing tests.
That we have gotten to this point is pretty good evidence that
incentive licensing either was always a bad idea, or that it has at
least outlived it useful life

>stick with the current kind of plan. The alternative would be a simple
>"admission ticket" without motivation or recognition for "advancement of

No it means taking the acheivement out of the license process
and puts in where it belongs, in the feild wher we can advance the
radio art. (this of course leaves out the question of Code testing
for ever advances the radio art at all)

>the radio art" (our chartered purpose). This scenario has been tried on
>11m, and the results are there for everyone to see.

`BULL. The probelm in CB was/is anomyity and a lack of
enforcement. It never had a license struture with any technical or
code requiements.

Great, but can you do that by simply keying a code practice
oscilator or most any other audio source into the open mike
of a SSB rig?

Well, you enjoy posting with you computer, don't you. Ohm's law is also used in the development of your CPU (which seems to be wasting resources), memory, clock oscilators, etc. I use Ohm's law every day. Do you remember Ohm's Law? Or are you going to ask me for the offset of simplex?

I don't think ham radio should be elite for anyone. But basic operating skills seems to be an important thing to know - for an operator.

1231. ******FS: IC-Q7A AND IC-W32A PACKAGE DEAL******

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-18 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19990118011902.25944.00003333@ng38.aol.com>
Source record: 153121

- Hello there, I have two iCOM dual band HTs for sale as a combo. The iCOM W32A and the newly released iCOM Q7A mini-size HT. Both are superb HTs but I need the money so I am selling them. Information on them is below. I am asking $375 for both units including all the accessories (plus shipping). If you would like to take a look at the actual units that I have, I scanned a picture and can email it to you. (Below are links with pictures from iCOM.)
-
- iCOM W32A Dual Band HT/Scanner combo. Currently iCOM's top of the line full power HT. Dual VFOs with two simultaneous frequency readouts, independent S-meter for each, and of course dual frequency receive (without having to switch back and forth between two frequencies) Alphanumeric Tags (on both VFOs), PL Encode/Decode and SCAN (VERY handy!) , full DTMF Keypad, DTMF memories, and of course the CROSS-BAND REPEATER FUNCTION!! (which a lot of people find EXTREMELY useful), Battery voltage readout, Backlit LCD and Keypad (great for nighttime operation!!). Unit includes the ICOM BP-180 NiCAD battery pack 7.2 Volts 600mAh (very good condition, no memory effect). Also included is the rubber duck antenna, the optional DC power cord, and the optional RadioShack Speaker/Mic, ICOM BC-110A battery charger, and of coarse the manual. I'll also throw in the center loaded coil telescopic portable Radio Shack whip antenna which you can replace with the rubber duck when needed (for greater range) Wide 108-999 MHz receive (except 200-300 MHz and cellular - but you can still pick up cellular transmitions S9+ on image frequencies in the 960 MHz range, all of this has been programmed into memory. PLEASE BEAR IN MIND, IT IS ILLAGAL IN THE USA TO MONITOR THOSE FREQS.) Transmit is 140-150 MHz on the VHF side and 440-450 MHz (MARS/CAP done, but you can also enable 118-195 MHz TX on the VHF side and 420-510 MHz on UHF with another mod, info included, with a .JPG of the mod to make modification easier.) Plus DOS and WINDOWS programming software and schematic of the simple OPC-478 cable you can build for PC programming of the W32A. As an added bonus, the radio also has the manual programmed into the ROM of the unit, you simply hold down the GUIDE button and then press any key or go into any mode and you get a full explanation of that function scrolling across the bottom of the LCD screen (EXTREMELY handy when traveling!!!) Small size for a 5 watt unit, only 2 1/4(W) x 5 13/32(H) x 1 5/16(D) in. Serial number 03375. Everything in very good condition and operates very well. Take a look at a picture of it at
- < http://www.icomamerica.com/amateur/dualhand/#IC-W32A>

- iCOM Q7A Dual Band Transceiver/Scanner combo. This is iCOM's smallest HT, but it packs a lot of features into a small package! The amazingly wide 30 MHz through 1.3 GHz receive coverage can be EXTENDED EVEN FURTHER BY USING AN OPTIONAL $9 CABLE TO COVER .005 kHz - 1.9 GHz which includes LW, MW, SW, CB band, etc, (and the upper end will put you into some satellite frequencies as well.) The cable is not included, but it can be bought for as little as $9, you can build one with the included schematic (fairly simple), or you can use

one which is made for the Yaesu FT-50-51R, VX-1R or any iCOM HT. The software which does this is included (the software also lets you program the momories, set settings, etc, etc.) Included also is a schematic of this OPC-478 cable if you would like to build one yourself (fairly simple) - this is the same cable that works for the IC W32A. Transmit is 140-150 MHz and 440-450 (as you can see the MARS/CAP service band is enabled). Output power is 350 milliwatts (I was actually surprised at how many repeaters I was able to hit and hold with that amount of power!) Unit has 200 momories, AM, FM Narrow, and FM Wide modes, AN AMAZINGLY LOUD SPEAKER FOR THE SIZE OF THE RADIO!!! Also has Tone Encode/Decode and TONE SCAN!!! Backlit LCD Display, 2 priority channels, etc. etc. For more information directly from iCOM please see < http://www.icomamerica.com/amateur/dualhand/#IC-Q7A> and for a nice picture of it see < http://www.hamradiostore.com/web/gif/icq7fr.jpg> As you can see on those pages, this unit IS AMAZINGLY SMALL!! Radio comes with FA-S270C rubber duck antenna, belt clap, and hand strap. Unit serial number 01327. Made in Japan. THE UNIT IS IN MINT CONDITION AND ABSOLUTELY LIKE NEW! NO SCRATCHES OR FAULTS IN IT AT ALL!! I have the original box and the registration card which has not yet been filled out, so it's about as "mint" as they get.

If you are interested in these units (package deal only) then please email me and we'll work something out. No trades please. 48 states only. Money order only (too many problems with CODs) or check (two week clearance) Please email me with any offers. THANKS FOR READING.

You seem always able to top your past performances. What if you run
into a problem which has never been solved, for which no one has come up
with a solution? What do you do when you when you are in uncharted
territory?
What if you don't have the book?

First, you tout knowledge over skills. Now you tell us that you really
don't have all that much knowledge--just a library.

1233. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <77uls9$sdk@news.Hawaii.Edu>
Source record: 153123
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Cross-posted to: sci.electronics.components,alt.ham-radio.vhf-uhf,aus.electronics,aus.radio.amateur,aus.radio.amateur.misc,aus.radio.scanner,rec.radio.amateur.misc

I am interested in building a high gain / low noise amp to use in
masthead aplications for TV reception.

The freqs response required is 180 to 200 Mhz

I have built narrow band units using BF981 and other dual gate Mosfets
and gasfets but cant seem to get the response to be broadband enough
for this application.

Yes I could buy one ..... but wheres the fun in that !!
Some of the kits available (ie MAR series, OM350, uPC 1688G etc)
are too broadband and have NF of over 4 Db

Suggestions / circuits appreciated

The MX7000 uses the same keypad as the MX5000/AOR AR2001

They are still available but could become a hard item to find in the not
too distant future.

You might try AOR in Torrence first (http://www.aorusa.com).

Source record: 153130

Hi, if you're a Mac user, this message may be of interest to you. I've been working on my program GeoStat for several months now, and it's finally ready to go. I'm still updating it, but everything from now on is going to be minor.

GeoStat offers a lot of features that can be useful to a DXer or any ham who uses HF. GeoStat can render full-color grayline maps, predict sunrise and sunset time for any DXCC country, provide CQ and ITU zones, calculate distances and bearings, predict MUF/LUF propagation, perform prefix cross-references, synchronize your system clock to WWV over the Internet, automatically keep its DX database up-to-date, and more!

If that sounds interesting, download a demonstration copy today. It's fully functional, but it nags you to register every few minutes. If you have a Power Mac or G3, download your copy from
http://hamradio.ml.org/.click?geostatppc.sit
If you have an older 68K machine, use the url
http://hamradio.ml.org/.click?geostat68k.sit

While you're at it, you may want to download GeoStat's companion program, MacBeacon. MacBeacon can provide lots of information about the NCDXF beacons. It's free, but you'll have to use GeoStat to set its preferences.

If you have any questions, just email me.
73,
Mike

How can one call themselves an engineer, if they don't know the basics? That's how. I am not talking about RANDOM learning, which is waht your misinterpreting.

I have no opposition to anyone (including myself) going to a book to learn something, or remember something forgotten. But there are things that we need to remember - like what the offset for simplex is. ZERO!

Your missing my point, and I don't know if it's on purpose or not. I go to a book when I can't remember say...the gravitational variable for a 3 dimensional refraction of light. I literally made up something that I don't remember from Differential Equations. So now I have to go to a book, to find the formula.

Should I have to go to a book to find out the wavelength of the 2 meter band? Someone on 2 meters asked me how long a 2 meter antenna is...I said 2 meters! :)

Just want you to know Dave, that not all engineers are created equal. I am the type that is open to all knew possibilities regardless of where they come from. I have seen many people invent incredible stuff with no education. I often call in the machine operator to design a metal hook, because designing a metal hook seems to be beyond the mech. engineering dept. (I'm electrical, and don't do well with mechanical).

Also, unlike the old days (he is retired after all), you didn't have to do much to keep your job. All you had to do was show up, and read your library. Today, YOU MUST KEEP ON TOP OF TECHNOLOGY or you simply loose your job. This includes (but not limited to) solving unusual problems. I got to be Sr. RF Engineer by solving unique problems (one of my strong areas). I'm only 31 years old.But that's not something I learned in college...solving problems is something I learned in the military (that's another thread).

If retired engineers went back to the industry, I think they would be fired in a week.

Hey Leo,

I'm a little baffled by your suggestion that kids/teenagers don't like to learn. In my experience, they sometimes don't like to study the things assigned to them in school, but they do enjoy learning all about the things that interest them. Many teenagers will be able to rattle off an amazing amount of information about their favorite musical groups. If they're in ham radio, then there's a good chance that they're interested in its history and trivia. What better source than those who were involved in the beginning? A couple of teenage WWII buffs that I know are always seeking out old pilots, artillerymen...etc for first-hand info.

This is probably an individual thing, not an age-group attribute.

You are kidding ....right??? Its called using an opportunity to "plant the seed and watch it grow". Its done all the time. Selective words used at a selective time to benefit selected individuals. Alec Baldwin is Chairman of the Hollywood Anti-Censorship Committee (and a big $$$ contributor to the Clintons) that wants to be able to put any crap on film and call it ART. Originally Tipper Gore was in opposition with Baldwin regarding this issue however her voice was quelled almost immediately. Who quelled her???

Addendum to post:

Remember when Lloyd Benson humiliated Dan Quayle with the "I knew Jack Kennedy and you're no Jack Kennedy" retort. The Democrats knew in advance there was a possibility of Quayle referencing Kennedy as some point during the debate so the retort was practiced by Benson in advance just in case the a Kennedy reference was used. Quayle fell right into it face first

It was pretty effective wasn't it.....The Baldwin thing was used in the same context.....trust me.

--

Some people look at what is and ask why.....
Other people look at what isn't and ask why not.....

A library is information, not knowledge. If a person hasn't digested it, it isn't knowledge. Of course, no one made the stretch that any person could remember all of the information in a library. Then again, we weren't really talking about that at all, were we. Cecil has set the autopilot to "drift". My irrelevant questions are my response to your irrelevant comments.

By the way, if the 99 point whatever percent aren't trying to obtain HF amateur radio licenses, who gives a rats ass whether they get along fine without morse code or not? Did you have a real point to make?

Ah, Roland, you don't source current with the gate, you sink it.
Go back and read the 4000 specs again and see how much
current a gate can sink. I'd also note that there are LEDs which
require less than 5 mA to operate.

And, I figure ALL children aren't going to be intersted in ham radio. That was never true, even in the old days. If you had maybe, 100,000 children interested that might be a good start.

Though I suspect, "Join Ham Radio -- You Can Talk to Old Guys" is not the best marketing. Really, they're going to want to talk to each other.

Eugene,

My W32A doesn't have cross-band repeat functionality that I can find. It
has what is called "Auto Repeater Mode", but that's for automatic
offset. Cross-band repeat is not in the instructions. Did you make a
modification to the unit, or did I miss something? I would really like
to have this feature.

Maybe you should hit the books, Dave. I don't ever remember seeing a 2
meter antenna for 2 meters. I think the majority of 2 meter antennas are
1/2 meter. :-)

Well, I don't read all the threads so I am often unaware of the context.
That's why everyone should keep everything context free if possible.

Must not be very important. Nocode hams get along just fine without Morse
code. Waivered hams get along just fine without med/hi speed Morse code.
The overwhelming majority of the human race who has ever existed got and
gets along just fine without Morse code.

Curt--

Our hobby is, for many, "achievement-driven", not test-driven. How many countries do you have confirmed? The fellow with the General class that saw no reason to get an Advanced clearly does not work much DX which is what the hobby is all about to many with advanced ratings. My greatest pleasure in ham radio is breaking through a pile-up to a rare one with a relatively modest station-it was not getting my Extra and yes I do not have a technical backgound and did a lot of memorizing and listening to tapes to pass the tests--did the same thing for the bar exam. I do not attempt to practice law from memory--I refer to the appropriate authority which is what I do when I, for example, want to hook up a new linear and am painfully aware of my limitations in the theory of high powered electronics--it doesn't bother me for an instant to get help from a ham with a technical background who may not be an Extra.

Best, Andy K5VM

Andy,

I also love DX work and pile-up breaking. Since you asked, I presently have 72 countries confirmed via direct QSL and another 56 pending QSL. I have only been working DX since last September using a ground-mounted vertical and 500 watts. Others love contesting or rag-chewing, and there's nothing wrong with those things either. I understand your points concerning reference materials -- what you say about the law is also true in chemistry (my field). In each area, however, you must have a working knowledge of the fundamentals so that you know where to look for the detailed references. People who can do this are technically literate in my estimation. You obviously were able to master the code as well as sufficient theory to get your Extra, so you fit into this category. Asking for help is never a sign of weakness either. I don't think that these points argue against having a hierarchical licensing system though.

Contact:
Bill Pasternak (WA6ITF) / Amateur Radio Newsline
805-296-7180 / newsline@arnewsline.org

NOMINATIONS SOUGHT FOR 1999 NEWSLINE YOUNG HAM OF THE YEAR

The nominating period for 1999 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details.)

Any continental United States (48 contiguous states) FCC licensed Amateur Radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted before May 30, 1999 on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the 1995 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download from our website at http://www.arnewsline.org.

With continued corporate sponsorship, the award presentation is scheduled take place this summer at the 1999 Huntsville Hamfest. The Huntsville Hamfest, Chaired by Mr. Scotty Neustadter, W4WW, is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracting some 7000 attendees.

The Young Ham of the Year Award program was conceived in 1985 by then Westlink Report "Editor-in Chief" Bill Pasternak, WA6ITF. His desire was (and still is) to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio.

YHOTY 1999

Pg. 2

With the absorption in 1995 of the Westlink Report readership base into Worldradio Magazine, the awards originator has decided to continue it under the banner of his own "Amateur Radio Newsline" organization. It is his belief that this real-life experience may lead the award winners and many other young hams into technology based careers that will make them the scientific leaders of the future.

The Amateur Radio Newsline, better known as "Newsline" is the worlds largest not for profit and totally independent ham radio broadcast news and data information service. It was organized in 1976 by Jim Hendershot WA6VQP and Bill Pasternak WA6ITF. Since that time it has produced and put to air over 1100 consecutive weeks of news of free bulletin programming dealing with Amateur Radio and related personal communications issues.

Corporate underwriting for the "Young Ham of the Year Award" program is supplied by Yaesu U.S.A. Corporation and CQ Magazine. Yaesu is a world leader in the design, manufacture and distribution of high quality Amateur Radio and commercial two-way radio equipment. CQ Magazine and its sister publications CQ-VHF and CQ-Contest are owned by CQ Communications and are considered the trend-setting publications serving todays modern radio amateur. The continued support of this award by Yaesu and CQ has been well received within the U.S. Amateur Radio Service.

The United States Amateur Radio service is force of over a 700,000 publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster.

Past recipients of the Newsline Young Ham of the Year Award (and its predecessor), all of whom epitomize the heart of dedication to their nation include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991), Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux N5XMH of New Orleans Louisiana (1993), Allison Zettwoch KD4CKP of Louisville Ky. (1994) and Adam Weyhaupt N9MEZ (1995), Toby Metz KB7UIM of Agoura Hills Ca. (1996), Brian Mileshowsky N5ZGT of Albuquerque N.M. (1997) and Richard Paczkowski, jr. KF4BIA of Edgewater Fl. (1998).

More news, bypassing the suspect component proves that
it is the item at fault.
I have been given 2 equivalent numbers SL7689 and LM302
neither appears to be a current device so we now need a new
equivalent to those.
1820-0158 are original HP numbers, thanks for that.

Jim--

I visited your web site--you have the ultimate "boatanchor"--that beast is a beauty ! I also understand why, since you are primarily on 160, the Advanced rating has not been the priority it would be if you worked DX on 15 and 20. I'm afraid I have gone the opposite direction--I have an Icom 4KL hooked to an Icom radio so I effectively have a 1000 watt transceiver--everything is automatic including auto-tuning. :-) Best for the technically challenged :-).

Regards, Andy K5vm

At 500 W, let's assume CW op with a 40% duty cycle and on/off times of 20/30 minutes. This is an average power over 30 minutes of 133.3 W.

At 133.3 W, the following minimum distances (horizontal) between the antenna and areas of uncontrolled/general public exposure must be maintained:

2.0 MHz 0.9 feet
4.0 MHz 1.8 feet
7.3 MHz 3.3 feet
14.35 MHz 6.5 feet
21.35 MHz 9.7 feet
28.5 MHz 12.0 feet

For controlled exposure (amateur and household), the minimum distance on 28.5 MHz is 7.1 feet (assuming 200 W average power).

These are conservative estimates based on simple formulae. A more precise estimate, based on NEC modeling or field measurement, would probably permit closer operation.

For the first requirement, I would locate the antenna 12 feet from my property line and post "danger, high voltage" near the antenna. For the second requirement, I would plant pricker bushed around the antenna and tell my family not to fall asleep closer than 7.1 feet away when I am on the air.

Ed, except for the controlled environment, the exposure averaging time
is 6 min., not 30 min......so you may be transmitting continuously

during that 6 minute period, which would raise the average exposure.
etc.

Yes, indeed. That is why I was assuming 133 W average power for
uncontrolled exposure and 200 W average power for controlled. I assumed
that it was likely that someone would eventually transmit for 6/6
minutes, so I multiplied 500 W * 40%, with no on/off time adjustment.

Tough to get me on RF-exposure issues; I wrote the book on the subject.
:-)

From KA9DHZ

I did not believe the argument that Mr
Hollingsworth was befriending wb2otk but I believe
as a ham we should all befriend one another and
better the hobby.

I about rolled with laughter when I heard on 3894.5
that Mr Hollingsworth came on frequency there so
he could conferance with the most credible and
influential group in Amateur radio.Perhaps the
most under the influence group might be
believable.

folks should have a good time and perform a
service for the community when possible and gibe
up the petty rivalry and jaming.

Actually I thought that was pretty clever and accurate. Unless you personally know a DX station, you are chastised if you actually try to converse with one. The garbage that you hear around a pileup makes the newsgroups sound mild. If spreading good will and getting to know foreign hams is what ham radio is for then DXing doesn't get it. Try the Internet...

1291. VE exams vs old exams

I know :)

It's well done too....although I suspect many younger hams, and those
without any technical background, have a tough time following it to
ensure compliance. I've helped several here in Phoenix area with their
calculations.

We have a site south of Phoenix, (South Mtn.) with enough TV RF on it,
that standing at our DPS building, outside, you are subjected to 1/2 the
allowable RF, continuously. At the base of one of the TV towers, you
are at the maximum allowable threshold for a controlled environment. I

make it a point to try not to visit S. Mtn. anymore. We use a Narda meter here. What does the League have for RF measurement?

The key here is non-commercial use. Many professional drivers get there ticket. It allows long range communications(HF mobile) or reliable local comms. As long as he or his employer do not recieve monetary gain from his operating, the use of ham radio at work is permitted.

We made it as easy as we could, without simplifying it too much. Most hams can use their PEP and apply it to the very first table in Chapter 8 and get the required distance. This is truly a worst case. If the antenna is at least that far away from neighbors and/or family, the dreaded evaluation is over. If not, the book describes how to calculate average power, feed-line losses and offers a number of tables based on antenna modeling that are a more accurate, non worst-case estimate. One of the easiest ways to do an evaluation is found at http://n5xu.ae.utexas.edu/rfsafety/.

The QST article I wrote for Jan 98 offers a reasonably concise explanation, and some simplified tables. It has been reprinted at http://www.arrl.org/news/rfsafety/, along with other articles and links.

> We have a site south of Phoenix, (South Mtn.) with enough TV RF on it,

Even at the permitted limit, I wouldn't personally be very concerned. The regulations are based on the recognized C95 standard, as written by The IEEE Standards Coordinating Committee 28 (I am a voting member on that committee and serve on one of its subcommittees.) The committee developed the standard based on several hundred research papers. In those studies, they found that at an absorbtion rate of 4 W / kg of body mass, across a number of human and animal studies, temporary difficulty was observed performing complex tasks. As an example, train a monkey to push a button 6 times to get a banana, put him in the field, he gets hot and doesn't want a banana. Turn it off, he is hungry after all and pushes the button.

These are thermal effects. A good analogy is to imagine that are in a closet just big enough to hold you, with a 500 W heater in the same closet. How long would it take before you didn't want a banana? :-)

They then built in safety factors of 10 for occupational/controlled exposure and a safety factor of 50 (!) for uncontrolled/general public exposure. The general-public level set by the standard is, in essence, 2% of the level that made a monkey not want to eat a banana. Now, if this were a difficult standard for hams to meet, I would have a problem, but most hams meet it with room to spare. That gets us the best of all worlds, in most cases. I have done a number of club and convention talks on the subject and I issue a challenge that I can, using the book, complete station evaluations in under 2 minutes. So far, I haven't lost. :-)

The scientific concensus is that to date, none of the low level effects reported have been confirmed to the satisfaction of the wide concensus of the committee (about 60% researhers, representation from government, industry and user groups like ARRL). The committee continues to look closely, however, and are considering over 1000 papers for the next revision of the standard. Some of these studies include reports of low-level effects that have not been able to be duplicated by others, but the committee is taking them seriously in some cases nonetheless, with the the studies being duplicated by the original researchers, under the eye of a team who volunteered to travel to his site to help resolve the questions.

> We use a Narda meter here. What does the League have for RF measurement?

I purchased a Holladay instrument at a hamfest, surpisingly, with a nice E-field probe. I am going to send it out for actual calibration and take them up on a kind offer to supply an H-field probe along with it. We also have a Rohde/Schwartz ESH-2 calibrated receiver and/or an HP-8563E spectrum analyzer, but lack a "modern" calibrated antenna. I am looking into buying one this year, if I can (although if anyone would like to make a tax-deductible donation... call me -- collect!). I have a very old Empire field-strength meter, with calibrated antennas, but it is probably older than I am and has not seen a cal lab since 1968. I have used it a bit doing low-level measurements on the Phonex wireless modem jacks, but don't yet trust it, or my skills.

I just bought a Sangean ATS 808, at a pawn shop for $45. It is like new,
with everthing but the manual. It is my first SW receiver, and I am looking
for a scanned or faxed copy of the manual. Can anyone help??

Thank you,

Hal

just lazy--I think we have
>> lost another ham which I think is unfortunate.

Now lets assmue that you are one of those people that believes
that those who don't learn code are in fact lazy. The question Why
call them lazy? Do you think calling them lazy will get them to learn
Code? Or is it an effort at a "Code cleansing" of the Ham bands? IOW
what is being served by calling NoCoders lazy?

Any takers

I think his question makes sense because I have a BayGen, and I agree it's
nothing special as a radio. But I seem to remember that you can use the
power from its hand-cranked generator to power something else. (Sorry, I
don't have the energy to go and look...)

1319. radio and Y2K

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-19 00:00:00 UTC
From: brewster@calhoun.lakes.com
Message-ID: <brewster-1801992311410001@dcp1-10.msp.infi.net>
Source record: 153048

Some of us are getting a bit...concerned...about Y2K. (If you are among those who think the danger has been exaggerated, please don't bother flaming. Just go on to the next message, please; pretty please. If you think there's a real danger, keep reading.)

In Y2K forums, people often mention ham radio as the only viable communication that would be available if the big systems went down. But I haven't seen anyone in a ham-radio context mention it. If this is the all-out emergency that many fear, the ham community could be essential, like when there's a typhoon or earthquake somewhere, but on a vastly expanded scale. As with other Y2K issues, it wouldn't be one disaster area within a world that still works. The whole world would be a disaster area.

But if hams are to fulfill this potential, we need to think about it now. (I say "we" nervously since I just got Tech and am studying for General.) The big issue obviously is power. Some of you might have diesel generators, but these will be boat anchors once the fuel runs out. If you have sustainable power, your equipment might put a severe strain on it. Anyone have a water wheel? I have wind and solar (cost an arm and leg) and am looking for a good low-power transceiver, about which I posted on r.r.a.equipment.

Is anyone here thinking about how radio could help out if things collapse? Is anyone working on the power problem? Would appreciate an email copy of any response to

brewsterc@excite.com

B.S., Mr. Mensa. I want it open to anyone who passes the tests. I just don't happen to think that we need to go into a "giveaway mode" in order to interest people in amateur radio. I got into amateur radio specifically to operate HF...and I don't have cronies.

Didn't say one word about you NOT knocking at my door. You can knock on it any time and when you identify yourself, I'll call you an asshole to your face. As far as the test goes - I don't give a damn if your daughter passed it. If I wanted to pass it, I would. I have no need for more than my current license, I use 2 meters and am not in any big rush to go to any other bands.

Kinda takes the wind outta your sails, eh Burpie Boy - Asshole of the Year.

This is a true story.
I know this guy whose neighbor, a young man, was home recovering from having been served a rat in his bucket of Kentucky Fried Chicken. So anyway, one day he went to sleep and when he awoke he was in his bathtub and it was full of ice and he was sore all over. When he got out of the tub he realized that HIS KIDNEYS HAD BEEN STOLEN and he saw a note on his mirror that said Call 911!. But he was afraid to use his phone because it was connected to his computer, and there was a virus on his computer that would destroy his hard drive if he opened an e-mail entitled "Join the crew!" He knew it wasn't a hoax because he himself was a computer programmer who was working on software to save us from armageddon when the year 2000 rolls around. His program will prevent a global disaster in which all the computers get together and distribute the $600 Neiman-Marcus cookie recipe under the leadership of Bill Gates. (It's true-I read it all last week in a mass e-mail from BILL GATES HIMSELF, who was also promising me a free Disneyworld vacation and $5,000 if I would forward the e-mail to everyone I know.)
The poor man then tried to call 911 from a pay phone to report his missing kidneys, but reaching into the coin-return slot he got jabbed with an HIV-infected needle around which was wrapped a note that said, +Welcome to the world of AIDS.+ Luckily he was only a few blocks from the hospital-the one, actually, where that little boy who is dying of cancer is, the one whose last wish is for everyone in the world to send him an e-mail and the American Cancer Society has agreed to pay him a nickel for every e-mail the receives. I sent him two e-mails and one of them was a bunch of x's and o's in the shape of an angel (if you get it and forward it to twenty people you will have good luck but ten people you will only have ok luck and if you send it to less than ten people you will have BAD LUCK FOR SEVEN YEARS). So anyway the poor guy tried to drive himself to the hospital, but on the way he noticed another car driving along without his lights on. To be helpful, he flashed his lights at him and was promptly shot as part of a gang initiation. And it's a little-known fact that the Y1K problem caused the Dark Ages.
P.S. If you forward this to 10 people in the next 5 minutes you will be blessed with absolutely nothing. I guarantee.

You could try "http://www.arrl.org/arrlvec/examsearch.phtml".
That web page allows you to search for a license exam session
by state, country, or zip code.

This is why people with Internet access and serious mental problems should not:

1. Smoke crack
2. Sniff glue
3. Drink alcohol
4. Breed
5. Be allowed to use a computer
6. Meet their cousins (see #4. Exception: those in Kentucky or Arkansas...must maintain the population.)
7. Be trusted to take their medication on their own without supervision.
8. Open their windows.
9. Have Internet accesss in the first place.
10. Get their Ham license and have contact with anyone who is not family or white-coated friendly hospital staff.

73 and I hope you're feeling better real soon, ok? Bye-bye. You take care of yourself and do everything the nice people in here tell you to do, ok? Everything will be just fine. Don't forget to take your pills. They will make you all better, ok? We'll be back again real soon to say Hi and to see how you're doing, ok? Bye.

Cecil,

I'm happy to report that my amateur station does not have a body-count
associate with it... In fact, since I'm using a Butternut HF6VX
vertical, the bottom part of the antenna is at quite low impedance,
unlike some of the center-fed vertical dipoles or top-fed verticals on
the market. Hence, no high RF voltage at squirrel-level. The antenna
base is also surrounded by a 6' wooden fence which encloses the whole
radial field.

Thanks for your concern,

Curt Breneman

Mark,

I suppose that my "technical literacy" comment was poorly phrased, since I was largely referring to the methods used for passing the theory part of the exam. In a sense, though, technical literacy can be stretched to include context -- a foundation of information in a particular area. CW is certainly a part of the technical history of radio. Technical literacy also implies the capability of appropriately using a particular piece of equipment, not just a knowledge of its function. In that regard, CW proficiency is required in order to use much of the older radio gear and many modern QRP rigs, since they may not have AM/FM/SSB capabilities. An analogy: A computer tech would not be considered "computer literate" if he/she could only repair or swap boards and did not know how to boot the thing up and try it out.

Hi,

I am from the UK and I am interested in buying a 706MKII, preferably the MKIIG (with 70cms).

Please Email me the pricing on these, I am from the UK but would be interested in importing one especially an ex-demo / second hand unit, especially if the price is right.

Anyone got any ideas ?

Thanks for your help,

Simon

Ps, please email me direct, as I don't often get the chance to read the newsgroups.

Which is one reason we call ourselves "amateurs." I choose to use
Morse just as I choose to commute by bicycle. There are faster modes
of communication and travel, but I exercise my own choices, and have
fun in the process. With both activities I utilize my given faculties
rather than having to rely upon complex devices, and I can perform
my own repairs.

>these more advanced operators are the dirty birds craping in their own nests?

Nothing changes. We're the same rogues today as we were 87 years ago:

"With the first news of the sinking of the Titanic, every amateur
in America camped on his key and added to the bedlam..."

"Thousands of messages piled up at the shore stations. At the solicitation
of the American Marconi Company, the government ordered all radio stations
north of Hatteras closed down, leaving only those at South Wellfleet,
Siasconsett, Sagaponack, and Seagate open; they were to handle Carpathia
traffic exclusively. The order was enforceable only on commercial
stations; the amateurs blithely continued "on the air." The situation
became so desperate that Newport Radio, a naval station, "requested every
station in range to keep out" until a list of the survivors could be
obtained. Department of Justice men went to work tracing the origin
and misleading messages."

>My Gordon West "Technician No-Code PLUS" book (from Radio-Shack) has a
>band-plan that shows only 146-146.58 & 147.42-147.57 as being available for
>Simplex operation...

Yes, actually ANY frequency from 144.1 to 148MHz is available for simplex operation however if there is a repeater on that frequency you'll either be activating it e.g 147.740MHz or talking on the output 147.140MHz in which case when the repeater comes up it will more than likely cover you up. The "band plan" is more a gentlemans agreement, for example 145.960MHz is open for simplex operation too but it's part of the satellite sub band, many amateurs fail to recognize this so while there chatting away on what they think is an "open" or unused frequency they are FM'ing satellites as they pass over creating QRM for those trying to do weak signal work on the satellite.

>Are the other frequencies totally off-limits to such?

No, but I salute you for asking, just because you don't hear anything on the frequency doesn't mean there is nothing there especially with the satellites where the downlink is on a completly different band so you wouldn't know the frequency is busy.

>Is it just what ARRL'd like to see happen?

Well, it's not so much what the ARRL would like to see, it's a suggestion based on the frequencys currently assigned to repeaters, packet, satellites etc. For example 145.010 is available for simplex but it is also set aside as a packet frequency.

>Where can I get a CURRENT band-plan (if there is one) for each of the
bands?

Hi Rob,

It's not possible to download the newer ADMS they use an archane copy protection system that check sums a block on the disk so even archiving it can be a problem. Check with Clint Bradford he seems to be the RT Systems PR man.

Why not send him an e-mail if you miss him that much?

CB Rambo/Drew will disappear for a few months, and will probably be back
under a different AOL screen name. The things to look for in the posts will
be

1. Expertise in libel lawsuits.
2. Occasinal spelling flames.
3. An obsession with Eric Oyen.
4. An obsession with the gutter frequencies of 14.313, 14.300, 3.950, etc.
5. A claim to have an amateur license, but will post no callsign.
6. Praise for freebanders, (although he says he never engages in such activity
himself.)

The problem with the referenced web site and nearly all of the information given out on this subject is that none of it takes into account near field exposure as required by the standard. However, this is often (or generally) the type of exposure that we are most interested in for HF frequencies. The simple k/r**2 formulas and computer 'programs' based on that are woefully inadequate for HF. Near field caluclations are more complex and must take into account the type of antenna that is used to even come close to a good approximation (non-resonant antennas such as G5RV's really need to be looked at, for example. Resonant dipoles generally fare much better as you might expect). Such calculations will put your PC to work. There is a program called nf.exe. I'm not sure where to get it anymore but it does provide a more honest (less optimistic, in most cases I have tried) approximation of where your station really is wrt C95.1.

You just might be a stump jumper if

1. your secret agent in the pork butt project is an school boy.

2.If you think international morse code is made up of three characters. Dit Dah and Duh

3. If your ant. has more elements than your wife has teeth

4.If your daugters hair do gets caught in the rotor for your beam.

5.If about 1/4 of your on the air time is used saying,Hang on boys I got to go pour another high ball.

6. If you use the heat sink on the back of a rig to cook waffles.

7.If when people hear your transmitions they think of peanut butter and jam. Sounds like peanut butter stuck in the mouth alternating with jamming.

8.If you have a mag light taped to your beam so at night you can tell where it's pointed.

9.If your dipole doubles as your wifes clothes line

10.IF your powered by achohol (alkyhaul) like some race cars

11. If you cant operate mobile because magnet mounts wont stick to bondo.

12.If your secret wish is to go through life again and become a proctologist.A job you could really get into

13.If your favorite preacher has to gag after every phrase ahh. Every time he speaks ahhh

14 If your grandma spoke about meeting grandpa at the family reunion

15 If you think back scatter refers to the stuff the fan in your amp throws when you accidently slober in it

I would suggest treating the problem as a DC coupled amplifier rather than a narrowband RF approach. Make a preamplifier as a differential pair (or AC couple into a single transistor amplifier). Instead of using a matching network to match the input impedance, synthesize the input impedance with feedback. If you apply feedback around a fixed gain, high input impedance amplifier (inverting, of course!), the input impedance is Rf/(gain+1). So if your preamp has a gain of -9V/v, and a feedback resistor value of 500 ohms, you will have an input impedance of 50 ohms. This will be a broadband amplifier; low end set by either DC (for a diff pair) or by your AC coupling. High end will depend both on the response of your amplifier open loop and on parasitics associated with Rf. You will get fewer parasitics if you do NOT use spiral trimmed metal film resistors. Use either chip R's or non-spiral trimmed resistors (such as from Precision Resistive Products). The spiral trim gives the resistors extra L and C. You can also use carbon comp resistors, but I've found that they have about the same capacitance as spiral trim for some reason.

Acutally, the web site and simple formulae are reasonably accurate for most antennna types IF THE GROUND REFLECTION FACTOR IS INCLUDED. After a fair amount of discussion, and no small number of models, the FCC agreed with me and the tables in OET Bulletin 65, supplement B include a 4 dB ground reflection factor. I ran NEC-4 models of dipoles, Yagis, verticals and other common antennas -- even in the near field I found that the NEC-4 model showed good correlation on the required distance with the simple, formula based method, again, IF the ground-reflection factor is included. The exception turned out to be the very small loop; in the near field, the field goes up WAY higher than the web page would indicate. The tables in Supplement B were sent to me by Kai Siwiak, KE4PT, and we immediately forwarded them to the FCC. Kai is well know and respected in the electromagnetics field. (He is also a member of the ARRL RF Safety Committee.)

The NF.EXE program is a scaled-down version of Brian Beezley's Antenna Optimizer. Beezley made it available to the world as freeware. It is based on MININEC, reasonably accurate, but for near-field calulations, MININEC assumes a perfect ground, so the resulant calculations will have higher peaks (as direct and reflected rays reinforce) and deeper nulls where the direct and reflected are out of phase. Multiply your power by 4 and run the web page with no ground reflection factor, or by 1.56 and run it with (should get the same answer) and you should have excellent correlation in the worst case with the NF.EXE results. NF.EXE gives you the peak voltage of the field, not the RMS, so you need to multiply the result by 0.707 to get the RMS value that you could use to do a power-density calculation (either actual power density, of "plane-wave

equivalent." NEC also gives the peak value of the field. EZNEC takes that into account and calculates the RMS near field E or H field.

Now, using NF.EXE (after correcting for peak field results) or any of the NEC-based programs, you will find that under many circumstances, the required distance is LESS than the worst case indicated on the web page (under a high-gain antenna, which is putting most of its energy at the horizon, even in the near field). But it COULD be that bad, under some circumstances, so it represents a good "worst-case" estimate.

Now, there are cases where one could have multiple reflections, and resultant hot spots, and these would need to be addressed if actual exposure is occurring and known to be over the limit. Using any reasonable evaluation method is considered adequate to the requirement that hams evaluate thier stations, however.

I agree; Gordon is one truly promoting the hobby.

ARRL has a good book, too, Now You're Talking, that goes into quite a
bit of explanation of what the answers are, too. It is a fair piece
bigger than Gordon's and it is designed to also serve as first tutorial
on what hams need to operate once they are licensed. It is available
from Radio Shack, most ham dealers and, of course, the ARRL
(http://www.arrl.org/)

Commercial "off." :-)

1363. IC-706 MARS for VHF Modifcation

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-20 00:00:00 UTC
From: Jim Deeming <jfdeeming@earthlink.net>
Message-ID: <36A62D28.C79ADF59@earthlink.net>
Source record: 152943

Does anyone know of a modification for the IC-706 (first version) that
will extend the VHF transmit range? The followiing modi extended the
HF portion but not the VHF range.
Thanks, W0JFK (Jim)

MARS/CAP Modification for ICOM IC-706:

Tools required:

1) #0 Philips head screwdriver
2) 10 - 15 watt pencil tip soldering iron
3) Magnifying glass
4) Tweezers

Remove the TOP cover by removing three philips head screws on the top
and one on each side. Move the speaker bracket out of the way. Locate
D-59, this is a three terminal SMD diode in an SOT package, about
1 x 3 mm (with the radio front panel oriented towards you, D-59 is
located in a row of SMD diodes just to the right of the ribbon cbale
header above the 9 MHz SSB filter FL-30. There are pads for 5 diodes
with only three installed. D-59 is the second from the left).
Useing tweezers and a low-wattage soldering iron (and magnifying
glass, if necessary) remove D-59 by appplying some heat to the single
leg side of the device while lifting gently, then apply heat to the
other two legs and removing the device. Be careful not to apply too
much heat, not to rip or burn any traces or not to leave excess solder
on the PCB.

Replace the speaker bracket and top cover. Apply power and reset the
microprocessor.

TX = 1600 kHz - 54.00 MHz and 118.000 - 174.000 MHz

Hi Andy,

Free enterprise is great. An offer is just that -- an offer. The
seller has the choice and option of agreeing or not to the "lowball"
price.

I buy and sell gear from time to time. You'd laugh at some of the
lowball offers I get. A simple "No" reply usually works. I then move
on until I get an offer that both the buyer and seller agree on.

Capitalism is a wonderful privelege that we in the United States of
America enjoy. Free markets are efficient, with both winners and
losers. It's up to each of us to do our due dilligence. It happens
every day on the New York Stock Exchange. It defines
the very essence of the American way. The ethic is that once you make
a deal, it's a deal. Done. If you didn't want to sell, say so in the
FIRST place, not after you "shake hands".

From: Peter De Ridder <peter.deridder@online.be>
Message-ID: <785hjrmlk1@trex.antw.online.be>
Source record: 152947

Hello,

Thanks for reading.
I have a JST-135 hamradiotransceiver. The problem with it is that above a certain power output (around 80W)
the transmitterpower starts fluctuating strongly, as if some kind of SWR-protection is working.
The reflected power, measured in the radio (and confirmed with an external SWR-meter between the radio and a dummyload), is however zero. The CPU therefore, according the schematic, gets no input of bad SWR whatsoever and will not cause this power pull back.
What can be the reason then?
Is the final push-pull PA stage oscillating? How can i detect this?
Anybody with experience on repairing PA's?
Anybody with a background on servicing these JRC-radio's?

Thanks for your help,

Peter, ON4AGP

1369. Amateurs as Gulf of Mexico Weather Watchers

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-20 00:00:00 UTC
From: Otakuboy@bigfoot.com
Message-ID: <36a65fd0.262083749@news.mindspring.com>
Source record: 152949

Hi all,

KC5OHI here.

A few years ago, I went to visit a fellow HAM to see what type of equipment he had. He mentioned something briefly that many times HAMs will band together in a loose network of sorts to assist in weather watching for ships and rigs in the Gulf of Mexico. I remember him being very diligent about it, noting he had to "report" at 5pm each day. I believe he also sent his data to meteorologists. (Maybe it was during Hurricane season only?)

I'm thinking about writing an article about this for WeatherWise magazine, presuming such a "network" exists. Specifically, I want to explore how they assist forecasters and those who watch the weather for such precarious places as an oil rig and ship.

You can either reply here, or you can e-mail me at mike(@)writermike.com. Of course, take out the parantheses before you mail.

73's .. and Cheers,
Mike Whalen

There is no comparison between the ARRL books and West's books. The
League's publications are very thorough texts and courses in themselves,
while West's guides remind me of the Bash books - Q&A, and really
nothing else - one will pass the tests but won't have gained any-
thing from the experience (except a new ticket).

A big thank-you to the League for it's 80+ years of fine work!

73, Jeff WH6U

1371. Simplex Repeaters

Newsgroup: rec.radio.amateur.misc

The time has arrived for simplex repeaters on the Amateur Bands. They work really well based upon my experience with the new Radio Shack Repeater Controler; however, some of the old farts won't accept the concept, probably because they don't have much life left and need communications right away. Anyway, check out the new simplex repeater controller sold by Radio Shack because they work really well.

1373. !! Help !! FT-50R question

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-20 00:00:00 UTC
From: Francis <ve2fgs@videotron.ca>
Message-ID: <Dwvp2.3597$6k3.2964@weber.videotron.net>
Source record: 152953

Hi everyone. I Just bought a new Yaesu FT-50RD today. (it's my second FT-50).

I tried to do the hardware freeband modification with no success. Yes I did remove the small jumper and the above 0 ohm resistor. I did reset by holding knob+light+pwr. After, I turned the radio off. Then, I entered the "service menu" by holding light+ptt+knob+pwr.

The problem is when I see in the screen "BAND -a1- " there's no way to change it. If I press the knob as mentionned in the modification page, my radio returns to the VFO mode. I cannot put this -a1- to -free-.

Oh, by the way, the serial number of my radio begins with 7L23......

Anybody can help me ???

Thanks a lot

Please reply by E-Mail if you can.

Francis VE2FGS ve2fgs@videotron.ca

Message-ID: <36A69B58.83F3C8F8@starnetinc.com>
Source record: 152956

Hello all,

Strange question. Does the electric company have any responsibility to see that their equipment (I.E. Transformers, Power Lines, Etc.) does not give off more then a certain amount of emissions? A few years back I had a couple of insulators on the power lines near my house arching. It took SEVERAL phone calls and about a 2 month wait before they would come out and fix the problem. I am starting to have the same problem again, and I am afraid that I will have to go through the same hassle again. Do they have any legal responsibility that I can remind them of if worse comes to worse and I have the same problem with getting service again?

Thanks!

Brian

Ab-so-lutlely Bob, I don't have the url handy but do a search for NorCal QRP and go to the "commercial web pages" listing. You'll find a plethora of kits ranging from single conversion monobanders for $50 to the new K2 160-10 10 watt rig for about $550 or so. Probably a dozen or so kit manufactures.

I have to agree there. I used the "Now you're Talking" book to study for my Tech Plus ticket. It actually explained the material so that I could pass the test because I UNDERSTOOD the questions. Well, most of em anyway :) I'm working on General now and the Gordon West Books just give me the questions, the answers, and a brief explanation. Is there a book similiar to "Now you're Talking" for the General exam?

1380. Re: Simplex Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-20 00:00:00 UTC
From: Tim Hynde <ka8ddz@eaglequest.com>
Message-ID: <786bg1$7te$1@smithers.eaglequest.com>
Source record: 152960

The time has arrived? I helped build a simplex repeater 20 years ago using discreet AD/DA chips and a counter to change 2 meg of memory addresses. I'll bet prior to that somebody did it with a loop tape. There is nothing new about them, we did it as an experiment but turned it into a message mailbox shortly thereafter. The reason the "old farts" may not nessesarily warm up to the idea is that simplex repeaters are not very practical, do you really want to wait TWICE as long for each transmission when your trying to discuss something? Even worse, if the station is close enough that you can hear the original transmission you now have to listen to it twice. I suppose it's a very inexpensive way to get a signal over a mountain but other than that, whats the attraction?

Tim (who at 36 doesn't see the need for simplex repeaters but isn't quite an old fart)

Most reading have probablhy already noted that he said "a 2
meter antenna" not "an antenna for the 2 meter band." The
difference is, of course considerable.

I don't know a lot of those I rag chew with. The key is, you do what the DX station wants to do. After all, the chaser wants the paste board from the chasee. If a guy is running a pileup in rapid fire manner, you don't stop him and ask to do antenna comparisons, ask about the agricultural production of his country or go into a lengthy biographical account. If it is plain that he is exchanging pleasantries and rag chewing with others, you may do the same.

Having a long conversation with a ham in the Netherlands from your U.S. QTH is not DXing. DXing is chasing the elusive and rare. It doesn't always mean trying to bust a pileup but it can mean that. More often it means getting in the pre-dawn hours to snag a rare one on 40m CW before the hordes find him. It may mean fighting summer static crashes on 160m to make out the call of that station in the southern hemisphere who is enjoying quiet winter conditions at his end of the pipeline. DXing need not be done with a gallon-and-a-half or with stacked yagis but it is a very competitive game.

There are brutes and churls who haunt the fringes of DXing as there any in most any avocation. Some try to ignore them. I let them know that they won't make it into the log and point them out by callsign. Pileup control is up to the DX station.

They don't hand out DXCC stickers for internet QSOs ;)

....only if grandma was in the same pileup on 20m.

Obviously you are not familiar with the OH2BH "Micro-DB Theory". If you put your antenna just five feet higher you have a fraction of a db. If you add just one more director to your yagi, you have another db. If you use hardline instead of RG-213, you have maybe a half db. If you run 1500 watts instead of 1000 watts you gain a couple of db. Pretty soon, you're talking about real improvement.

Nite Pirate

You should refer this matter to DX302MAN. His highly qualified staff could successfully coordinate the letter writing campaign you suggest.

You could ask him to assign a quick response team to "Project Pork Butt". I'm sure he would be happy to help you with this.

Maybe DX302MAN could check in the Stump Jumpers Net and announce all the names and addresses we need to write to. I'm sure KT4TR would be glad to have DX302MAN as a guest on the net.

After DX302MAN's announcements, then KT4TR could get on with the information about Pork Butt's crimes. Excuse me. Pork Butt's "alleged" crimes.

I wonder if DX302MAN's staff will be helping KT4TR and the Stump Jumpers give out Pork Butt wanted posters at Orlando Ham Fest.

I also wonder if the tape of Pork Butt Song will make top 40 on the radio. I sure would like to see it on VH1. Maybe they could get Pork Butt and KT4TR and Mick Jagger to do the video. And let the Stump Jumpers to sing the back up parts. Somebody call Rolling Stone. This could be a million dollar idea.

Go for it Nite Pirate. Keep us updated on "Project Pork Butt".

Can someone help with a source, in the UK, of UNC 4-40
screws 1/2" long for a piece of Racal equipment. RS etc. etc.
don't sell such unless you count D connector screws. The
screws required are 6 BA or 2.5mm look alikes. I need 30.

Thanks, simon.cox@breathe.co.uk

Here's another one you can add to your list: We formerly referred
to "seismic sea wave" as "tidal wave," but because such a wave has
nothing to do with the diurnal tides, we instead adopted the Japanese word
"tsunami." As you would expect, "tsunami" translates to "tidal wave."

73 from Hawaii (where we get tsunami alerts almost monthly due to
earthquakes occurring somewhere in the Pacific Rim),

I hope somebody has a dead Icom-47A sitting around.
I need the two upper right pushbutton switches. They are
mounted on a small PCB. The switches, and perhaps the
plastic piece of button on the switch.

If you have this, or a really dead 47A that has these parts,
(but not one run over by a truck, you know?) and
you want to rid yourself of it, email me, removing the
NOSPAM in front of my Email address.

The switches are the ONLY thing I need.

Or, not finding that, a place I can order new replacements
and get them in a reasonable time.

I wouldn't think ICOM still would support this, uh, older unit.

Thanks for your time.

I have an almost identical setup. A4S with 40m addon, but instead of
6 metres I have a pair of 11 element 2m yagi's bayed approx 7' above
the tribander and a 2m/440 vertical off the top.

I have not found any significant interaction although the longer boom
and elements on the 6m yagi might produce some.

my $0.02 :)

(snip)
>Anyway, I popped the battery back on the radio and turned on the SUB=DC
>feature. It showed 11.4 VDC! Is this normal?? The battery states clearly on
>the back "9.6V 600 mAh"...

This is IMHO a *very* misleading way to label these cells - rather like
labelling alkaline cells '1.1v' - a voltage at which their charge is
virtually gone.

> that's over 4 volts less than it's reading... I
>figure there's 8 1.2 nicd cells in there

Are they NiCd, or NiMH (see below)?

>...Could they really each be putting
>out almost as much as an alkaline cell? (1.5 volts?) (11.4 Volts / 8 cells
>= 1.425 Volts)

IME, NiCd cells at 1.2v open-circuit are virtually fully discharged. A
typical fully-charged NiCd cell will read well over 1.3v off-load. I
have measured as high as 1.4v for a just-removed-from-charge NiCd (and
even more for NiMH), and given that the meter function in the rig may
not be that accurate, I can understand it displaying what it did.

>This was all several hours ago. The radio has been off since then and right
>now my radio reads 11.0 V

Fair enough.

>Should I be worried about this?

I'd not have thought so. If you want to confirm the voltage, I'd do it
with a *known-accurate* DMM (digital doesn't necessarily mean accurate;
a recent session of comparing several cheap DMMs with a known-accurate
lab-grade instrument was very revealing!).

BTW, it can also be interesting to charge some NiCd (or NiMH) cells
fully, measure their voltage immediately after charge, and again 24hr
later without having used them, then measure again at intervals (off-
load) between periods of use. This measurement IME gives a pretty good
idea of state-of-charge.

Hi Mike,

1. He's not talking about "On-Frequency Repeaters" in the first
place, these repeaters are not real-time deveices at all. OK if the
band is quiet and you want a QSO with yourself though.

2. The things you describe, as first made by Pye of Cambridge
DID eventually catch on, and are used by most (if not all) mobile
phone network operators - but they're called "cell enhancers"
nowadays. I know of a couple of paging network operators who use them
also. Brilliant concept - providing you can get enough isolation
between rx and tx antennas. (about 90dB or more)

It's not a "typo," Tom. This topic has come up on a prior occasion.

I get paid to do and teach mathematics; to me math is a language
with its own grammar, spelling, and punctuation. Inaccuracies,
no matter how slight they might appear to you, should be corrected.
Our general population is so far behind in language arts and mathematics
that it's causing us to lag in some areas in which we used to excel.
To let an error go by without mention is only adding distance between
us and the "edge."

When someone copies "3.894.5" from the digital display of their radio
(without appending a unit of measure) it tells me they might not even
comprehend what that (unconventionally written) number is a measurement
of. It's an ambiguous notation, and there is no room for ambiguity
in mathematics.

(When I need a 10,000 pF capacitor, I don't go around asking for
a "103" even though that is how the value is printed on the device.)

To those (Cecil et al) who see no ambiguity with such notation, tell
me how you would interpret 14.627.495; is that last dot working as a
comma or a decimal point?

Nobody said it was a mathematical notation. Nobody said those were
decimal points. Someone said his receiver reads that "frequency".
So does mine. Tell me what kind of equipment has the above readout
and I will tell you what it means. On an HF receiver, it simply
reads out in both MHz and kHz at the same time on the same display.

Did you ever get the control command set you were looking for? I wrote
the original IC735 controller program for Icom back in 1987. I may
still have a copy of that instruction set around if you are still in
need. It may have been expanded since then however.

Ah, something from the days of tubes. Or, so it seems. I have in my
hot little hand a UDC232. For the unknowing, it's an Universal Data
Controller made by AEA. As I understand it, it's the predicessor to
the
PK232. The problem is that AEA made them without a modem. I'm not
sure
what their motivation was at the time but I'm in need of one if I
expect
to get this thing to work. Anybody out there know anything about the
UDC232 and its modem requirements?

Please be good enough explain the basic concepts to this old fart. I
would really like to know exactly what we are talking about here. Are
you referring to the "conventional" repeaters we use today on 2 meters
and 440 mhz., for example? How is this 'simplex' repeater going to
function?

Ron

The Orlando Hamfest has been the excuse for a meeting place
to "settle the score" for these RF-farts for many years.
It's the same tired, old chest-beating sh+t every FN year.
What a bunch of commensurate, overweight, plumber's-butted losers.

> I also wonder if the tape of Pork Butt Song will make top 40 on the radio.

You'll have to ask KC3AU that question. He provided the original impetus
for the song. (Note: FYI that WAS NOT any of the 3894.5 / 3.901
regulars who was playing that computer MIDI music on 3901 last night
from 8:45 to 9:20 PM EST. I will however give you a clue.
It was *probably* a ham, who has been gone for more
than a year, and who has returned. Good hunting)

Two decimal points? In U.S. mathematics, a decimal point separates the whole-number portion of a number from its fractional part. Instead of copying your radio's display, why not write out the frequency in a manner that conveys conventional notation? How about 3.8945 MHz, or 3,894.5 kHz (or just 3894.5 kHz)? This may seem picky, but truly, clarity in thought and writing is important in this day and age; your writings are the only device we have to gage your credibility. What and how you write offers the reader a window in which to view your intellect.

I'm trying to figure out how to operate an MFJ Grandmaster Memory Keyer model 484. I can get it to record but can't erase the gibberish already in the memories. I tried recording nothing, like you would do with a cassette player to no avail. I also notice that the dit's and dah's are reversed from what I get with the MFJ 422 keyer and the HK5A Heathkit keyer. Any advice would be appreciated or I would gladly pay for the cost of copying the pertinent section of the manual.

January 22, 1999
Target: rec.radio.amateur.*

Welcome to the W8MMQ Wire, for January 22, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: Switzerland changes its view on Morse code; ARRL members to receive email addresses; update: a software hoax affects some hams; former Canadian ham charged with jamming; upcoming amateur radio contests; and much more!

SWITZERLAND CHANGES ITS VIEW ON MORSE CODE
Switzerland's national Amateur Radio Society has done an about face on the issue of abolishing Morse code testing. Last November the societies journal published a statement regarding the code. It that said Morse code testing in the Amateur Service no longer serves any useful purpose.

But the commentary by the Swiss angered the neighboring Germans. Their Deutscher Amateur Radio Society, the DARC, was more than a little uneasy by the Swiss society's position and made its displeasure widely known.

After some discussions, the Swiss have backed away and issued a new statement. This one says that the Board of Directors of the national society have not yet reached any definitive decision on the future of Morse testing. But even here there seems to be a bit of controversy. This is because last November's magazine article was the result of a
vote at the annual meeting of the organizations regional presidents.

At that gathering, all of them voted to urge the abolishment of code exams.

Taken from Amateur Radio Newsline, 1/15/99

ARRL MEMBERS TO RECEIVE EMAIL ADDRESSES
ARRL members soon will be able to announce their ARRL membership through their e-mail addresses! Starting February 1, 1999, a new membership service will be available for those wishing to have an ARRL e-mail address, and you won't have to switch e-mail services to do it. Not only that, but it will be free-of-charge to League members!

The new, personalized League e-mail addresses will consist of the member's call sign @arrl.net. Electronic mail sent to the address automatically will

be forwarded to any e-mail account you choose.

As long as you remain an ARRL member, you'll never have to notify people of an address change -- even if you change Internet service providers.

As soon as the service becomes available, members will be able to sign up quickly and easily through the ARRL Members Only Web Site. If you are not already registered for the Members Only Web Site, you can do so at http://www.arrl.org/members/.

Taken from the ARRL Letter, 1/15/99

UPDATE: A SOFTWARE HOAX AFFECTS SOME HAMS
Last week, we reported that a number of individuals, mostly amateur radio operators, had contacted us, explaining that they had received a file via email that, when executed, erased their computer's CMOS settings.

At first, it was thought that the file only reset, or destroyed, the computer's CMOS data. However, Mark/N8DEF, who received the file, has informed us that it not only reset his CMOS settings, but also wrote "garbage" files to his hard drive.

The file has been emailed as both hamss.com and hamss.zip. If you receive this file via email, or see it posted on the internet, avoid it at all costs! If you have already been affected by the file, it would be wise to run an antivirus program, such as Norton Antivirus, or McAfee VirusScan. Although not confirmed, it is possible that the files written to the hard drive might actually contain viruses.

Just a reminder, the recipients are told that the file is an amateur radio screen saver. The file is relatively small, only a few kilobytes, but it effectively erases, or destroys, all CMOS data. Users must manually re-enter this information.

W8MMQ/KC8KFZ, Alton Wilson

WIN A HOLIDAY VIRUS A HOAX
And, another hoax ... this one not so harmful. The Symantec AntiVirus Research Center (SARC) has announced that the Win a Holiday virus is a hoax. We first heard about the virus this morning, and upon checking SARC's web site, found out about the hoax.

The virus was supposedly sent via email, with the subject of "Win a Holiday." Once the recipient viewed the email, the virus was said to attach to key system components, and render them useless.

Symantec says that there is currently no known viruses with the characteristics of the supposed Win a Holiday virus. For more information, visit the Symantec AntiVirus Research Center web site at http://www.symantec.com/avcenter/.

W8MMQ/KC8KFZ

FORMER CANADIAN HAM CHARGED WITH JAMMING
The FCC is not the only communications agency cracking down on malicious interference. The Radio Amateurs of Canada report that Industry Canada, the Canadian equivalent of the FCC, has charged a former ham with jamming.

On December 22, 1998, Christopher Watson of Peterborough pleaded guilty to having "unlawfully and without lawful excuse interfere with radiocommunication by interfering with link repeater systems" and "unlawfully and without lawful excuse send false and fraudulent messages and calls on the radiocommunication system of the Ministry of Transportation."

Watson was fined $500.00, and was placed on 3 years probation. Under the terms of the probation, Watson cannot "posses any radio apparatus that is capable of transmitting any messages, tones, communications of any description except for ordinary household telephone equipment (the latter not including cellular telephones)."

W8MMQ/KC8KFZ

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

Coming up this weekend, the ARRL January VHF Sweepstakes. For more information, visit the ARRL web site at http://www2.arrl.org/contests/announcements/99/01vhfss.html.

And, next weekend, the CQ World Wide 160-Meter DX Contest, CW portion. The contest, sponsored by CQ Magazine, will run from 2200-Z January 29 until 1600-Z January 31.

The YL International QSO Party, CW portion, sponsored by YL International SSBers, will run from 0000-Z January 30 to 2359-Z January 31. Operate CW mode only!

DX REPORT
From the Ivory Coast, I2AOX and IK2CHZ will be active from the 12th to the 25th of January from TU5IJ's QTH. They will be on 10 through to 80 metres and possibly 160 metres and the WARC bands, using CW and SSB.

From Chagos Island, VQ9QM will be on the air until March on the HF bands, including 160 metres. This counts as AF-006 for the RSGB Islands On The Air award programme.

The DX news reports listed above came from the weekly RSGB DX News Sheet, editied by Chris Page, G4BUE.

Taken from the Radio Society of Great Britain

SPOTLIGHT: FEATURED AMATEUR RADIO WEB SITE
From time to time, we review great web sites that have something useful to offer to the amateur radio community. We look at dozens of sites per week, and with the help of the many emails we receive from our readers, we pick

one of these great sites and present it to you here.

This time, we feature the AntennaX online magazine. Once a printed magazine, it is now a complete amateur radio "e-zine" (electronic magazine), read in over 145 countries!

AntennaX offers a variety of articles, targeted at the beginner, as well as the advanced, radio amateur. You will always find good antenna construction tips, information on how to set up your station, and much more.

The web site is very neat and orderly, and easy for anyone to navigate. One of the things that I specifically like about the site was the Ham Workshop, with a collection of articles on various amateur radio projects.

For enjoyable reading, and useful information, visit their site at http://www.antennex.com/.

If you have found a web site that you think we should review, just send the url to Dan/W8MMQ at w8mmq@voyager.net. We receive a lot of mail, but will try to get back with you as soon as possible.

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://my.voyager.net/w8mmq/. An archive of past newsletters is now available from the web site.

Information from the following sources was used in the production of this newsletter: the ARRL Letter, the FCC Daily Digest, the RSGB web site, and other published reports.

That's ridiculous! Why would you want to wait for the unit to record the transmission, then retransmit it? These types of "repeaters" are designed for emergency purposes, not everyday use.

Hi People
What is the skinny on the FT-3000 ??? I have an old
FT-5200 and have never liked the radio. On the other hand, my
FT-2200 is wonderful. It seems like each rig has its own
"personality". Any replies either to the group or direct will be
appreciated.

Gareth http://www.capecod.net/~gareth/n1msv.htm

I have an FT-3000 and it is the best 2 meter rig I have ever had.
It will put out 70 watts, and with 2 fans on it, will not get hot in
heavy use. It also has 900 MHz recieve that I listen to local cops here
in Little Rock. It will also crossband repeat FROM 440 to 2 meters,(but
not back the other way). It has dual watch and shows the voltage in the
display. A GOOD RIG.

The thing is, the power company has no obligation to fix the problem
immediately, they are usually quite busy with more important stuff.
If you can locate the trouble spot yourself, they will appreciate it.
Get to know the troubleshooter's name. Buy him a beer, or two.
Works wonders.......

1447. 73's?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-21 00:00:00 UTC
From: Edward T Grant <etg@geol.com>
Message-ID: <36A6FF3E.66D2A21C@geol.com>
Source record: 152886

This may be a little to "Far Out" for most people.
I remember reading that 73 was part of some larger list. In fact even saw some of the other codes although I don't recall what any of the others were except 88 which (to my understanding) are the only ones still in use.
As I remember it 73 stood for "Best wishes."
So wouldn't 73's (as is commonly said) actually be "Best wishes's"
I'm sure I'm overanalyzing this but I have had a problem with "ATM Machine" for a long time and this seems similar to me.

Think about it: "Automated Teller Machine Machine"

Some other examples of this are:
- PIN Number
- VIN Number
- DAT Tape
- PC Computer
- DCS Squelch
- AC Current
- DC Current
- VAB Building

These are a little different:
- DTMF Tones
- CTCSS Squelch
- CTCSS Tone
- DCS Code
- ABS Breaks

These are questionable:
- DIP Socket (a plug socket?)
- Mount Fujiyama (Fujiyama means "Fuji Mountain" hence "Mount Fuji Mountain")
- GFI Breaker (An Interrupt and a Breaker are basically the same thing)

There are lots of other examples that I can't think of right now but I'm sure each of you will be noticing them from now on. ;)

So is it me? Do I just think too much?

73
-Ed-
KF4FDT

PS.
I was ignoring broadcast radio while doing something else one day and caught a spokesman in a commercial say "...You can get your own Personal PIN Number for your privacy..." I nearly fell on the floor laughing. I didn't catch what the service they were advertising was or I would have felt compelled to call them

and share my observations.

I agree. I don't think these are for everyday use.
I can see the value of them in an emergency or on an outing in the park or something. Of course they would have to be completely portable and convenient to use.
I can also see some value in them as a piece of test equipment for the lonely ham to be able to test radio performance by himself.

> To answer your question, YES they are REQUIRED under FCC part 15 rules to

elliminate the problem. It may be found under "incidental radiation
devices". However getting them to do it is another matter. The proceedure
is as follows: Send a certified letter to the power company, detailing the
problem and mention the FCC part 15 stuff. Then in 30 days, if no action,
do the same with the public utilities board of your state. If no action
then send copies and a letter to the FCC itself. With copies of same to the
power company and the Public Utility folks. If you harass them long and
hard enough, you will probably get the desired results.

Hi Ed...
The issue of "Seventy-Threeses" has been around as long as there have been hams. There are usually a letter or an editorial mention of it nearly every year.

You might also like "one of the best" as oppossed to "one of the better". superlatives get abused more that just about anything. I get a kick out of otherwise seemingly intelligent people misusing 'an' and 'a' in conversation. I won't even get into such things like 'do you have a ink pen?' or 'can I borrow a match?' (or cigarette, or anything else that is designed as a 'one use' item..."Sure, you can borrow this match, just make sure I get it back when you're through")

A book, written about (at least) 20 years ago by (former NBC newsman Edwin Newman), 'English...The Death of the English Language'
is worth looking for. The mere fact that you noticed the examples you gave, leads me to believe you may like it. It's quite funny and equally as entertaining. 73 (singular) de Tom KB2FIK

>Is there a book similiar
>to "Now you're Talking" for the General exam?

Yes Kevin, Its called The ARRL General Class License Manual and it sells for $14. Its set up similar to the "Now You're Talking"license manual. One will find both books contain some grammatical errors such as the use of the word "however" about 50 times throughout the book, which makes the sentence in which the word is placed somewhat confusing. The author was obviously in love with this word.

These two books are a great resource HOWEVER the ARRL should really use proof readers (technical editors) who are NOT amateurs because there are several ASSUMPTIONS in the books pages which leave the reader guessing a few times. Overall, these two books are the best available at present.

Hello Brewster:

Dont take this the wrong way but it sounds like you're giving Y2K alot more credit than it deserves. Many hams may feel that the worlds communication responsibilities may lie in their hands (they did way before Y2K) however this is as far from reality than one may fathom. Do alittle research regarding the Y2K issue (from real computer programmers, not some kid who's good at Windows 98) and you will see that the problem is not as apocalyptic as many are touting it to be.

From the FCC Rule Book.

License Terms.
Licenses are normaly good for ten years If you have a license good for the old five-year term, a grace period of five years is allowed should you forget to renew. After two years of the grace period has passed, you will loose your call sign and will be assigned a new one. (Note: If your old call has not been reissued, you might consider getting it back as a vanity call.)
If you have a new 10-year term license, issued since January 1984, the grace period for reinstatemnet is two years.
Get form 610 from:

If you're talking of same-frequency repeaters they were developed and
used by the Pye Co of Cambridge around 1950. It didn't catch on.

>About half an hour later I looked at it and the "Trickle" light was on.

There is something strange here. The NC-50 charges at 800 mA. The
FNB-41 battery is rated at 600 mA, I think, so it should go from dead
to fully charged in a bit under an hour. If it reaches full charge in
less than half an hour, either its capacity has dropped to half of what
it was originally (which is not good), or it wasn't really discharged
before and something is funny with your radio.

>I
>figured it had finished it's quick charge cycle and was ready for use. It
>was so quick, in fact that it was a little disconcerting- I don't think it's

>is dead though.

From what I've read, fast charging is overall better for battery packs.
You may get fewer total charge/discharge cycles from a battery that's
quick-charged, compared to one that's very carefully slow-charged just
the right amount. The problem is that people generally slow charge
batteries for 14 or 20 or 24 hours even when they weren't discharged
to begin with, and they end up receiving a lot of overcharge. This
isn't good for the cells either. A fast charger shuts off when the
cells are near full charge, then switches to a trickle charge rate that
is slower than a slow charger.

>Anyway, I popped the battery back on the radio and turned on the SUB=DC
>feature. It showed 11.4 VDC! Is this normal?? The battery states clearly on
>the back "9.6V 600 mAh"... that's over 4 volts less than it's reading... I
>figure there's 8 1.2 nicd cells in there...Could they really each be putting
>out almost as much as an alkaline cell? (1.5 volts?) (11.4 Volts / 8 cells
>= 1.425 Volts)

That's normal. 9.6 V is the nominal voltage, and the battery will output
near that voltage during most of its discharge. Right after charging,
it can be as high as 1.5 V per cell. At the end of discharge, it will
be below 1 V per cell.

>I'd test the battery with my DMM but there are three contacts on the back of
>the battery and I don't know which connects to what.

Two of the terminals connect to the positive side of the battery (one for current out, one for charge current in) and the third to negative. Just measure across any 2 terminals. If you read zero volts, move one of the DMM leads to the previously unused terminal.

>This was all several hours ago. The radio has been off since then and right
>now my radio reads 11.0 V

>Should I be worried about this?

Not about the voltage. I'd worry about why the pack apparently recharged in under half an hour.

Dave

When listening on around 5.5 Mhz usb at 16.30 ish in the UK
for about 2 hours daily a noise that sounds like invaders from
outer space starts up and moves across the band. No doubt
this is in part due to atmospherics but what is the noise, those
using that part of the spectrum have difficulty when the noise
comes up but where from. It can't be test signals so is it
jamming of some kind ? any thoughts ? it is very repetitive
and must be man made, sounds like something from Dr Who.

1471. Want: MAX232 Schematic for Icom Computer interface

Newsgroup: rec.radio.amateur.misc

HI, I'm looking for a schematic for an Icom Radio/PC interface (CT-17). I have in my possession a couple of Max 232A chips which should work. I am looking for schematics that use these chips (or the 232). I know there have been a couple in QST, but my issues seem to have been misplaced (april 97 is one). If anyone can scan me a copy of any I would certainly appreciate it. Or if you can point me to a web page, that would be great also. I have a copy of a schematic for one that uses 22uF caps, but the MAX literature says the 232 only needs 1 uF and the 232a only needs .5uF. So I don't know if that one would work or not. Any help or info is appreciated. Thanks in advance.

1474. Re: ham radio dying?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-21 00:00:00 UTC
From: Colin Guillas <rguillas@nrn1.nrcan.gc.ca>
Message-ID: <36A76B9E.92DB78B6@nrn1.nrcan.gc.ca>
Source record: 152913

Um... I'm 16, and I'm having lots of fun. Although I don't speak for other people in my age group (my friends think I'm *nuts*) I can say that ham radio IS a lot of fun. I do know a few other teenagers around here that love it as well. Teenagers aren't all 2 meter operators who only use packet... also, they aren't just people who got their licenses years ago and never use them because their Dad who was a long time ham made them get one... my parents won't set foot near my shack, they're RF paranoid.

The reason you may find more teenagers on the 2 meter band right now, at least in Canada, anyway, is that 2 meter equipment is easy to acquire (licensed of course. :) and you don't need to know morse code. I LOVE morse code! I just don't get to use it often because I only own a 2 meter FM rig, and the CW nets aren't modulated in my area- only one or two, occasionally. Most teenagers are dead broke- you won't see us buying very much shack equipment. We buy, naturally, what is cheap, plentiful, and allows us to talk to local operators, without going broke. Behold the 2 meter transceiver.

I find radio history very interesting- I ALSO look towards the future. I am a volunteer at the Museum of Science and Technology, and am settling in to operate the radio station VE3JW there regularly. Talking with hams and non-hams as they pass by the radio station gives them a chance to see (and hear) what we are about. Those who are particularly interested have a chance to get on the local repeater and meet some local people. Also, having a teenager behind the counter breaks stereotypes immediately about amateurs- you know the ones I'm talking about.

I'm probably a rare exception. I don't care. I've probably talked 5 or 6 people into going *back* and re-taking their exams after they let radio drift off in the 1970s or 80s. I've also talked to kids who thought it was really neat, and meet one of them at a regular basis at meetings... he is studying his morse code right now (he's probably better than I am. :) as well as the rest of his books. He'll probably go for his test soon.

When you can make a difference, it feels *good.* Try it sometime... get out there in the community, and see what you can do. Donate a subscription of QST or QEX to your local library. Operate a JOTA (Jamboree on the Air) station for your local Boy/Girl Scouts. Instead of bringing them to your place, let them help assemble your station at their meeting place, if possible... and follow up. Talk to your local leaders and work out one or two nights where you could show them morse code, or meet other local hams.... of ALL ages if possible. Getting someone their own age to talk for a few minutes can make a world of difference.

Also remember that eventhough the band is 144 to 148mhz that doesn't mean you
can operate FM on 144 or 148mhz.

1478. Source for kits?

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-21 00:00:00 UTC
From: opalko@usa.net
Message-ID: <785vhfbtd1@nnrp1.dejanews.com>
Source record: 152964
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

Ok, so I don't have my license yet, but I'm going to soon. My question is more general, however. Is there a source for receiver and transmitter kits like the old Heathkits? Does anyone make stuff like that anymore?

On another note, is there a similar source for a scanner kit?

Thanks,
Bob

But.... aren't the organized Nets the "good guys" (legal traffic
handling) and the QRMer's the "bad guys"?? Or at least the latter,
since intentional QRM is always bad?

Bubba,

It is more likely that ARRL is using its status with the FCC to let us
begin to open the door to a new ham band by putting some users on it and
then documenting the results.

1482. AURORA WATCH: Middle Latitude Auroral Activity WATCH - 23 Jan

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-22 00:00:00 UTC
From: oler@solar.uleth.ca
Message-ID: <78b28m$g111@mars.online.uleth.ca>
Source record: 152669
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 23:00 UTC, 22 JANUARY

/\

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 23 JANUARY

HIGH RISK PERIOD: 23 JANUARY (UTC days)
MODERATE RISK PERIOD: 22-23 JANUARY

PREDICTED ACTIVITY INDICES: 30, 15, 10, 10 (23 JANUARY - 26 JANUARY)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR AND AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTHERN-CENTRAL BRITISH COLUMBIA TO SOUTHERN MONTANA TO SOUTH
DAKOTA
TO SOUTHERN MINNESOTA TO WISCONSIN TO SOUTHERN MICHIGAN TO DARK
SKY
SITES OF NEW YORK STATE AND SOUTHERN MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE
INCLUDING
MUCH OF NORWAY, CENTRAL TO NORTHERN SWEDEN AND CENTRAL TO
NORTHERN
FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN REGIONS OF NEW
ZEALAND
AND POSSIBLY EXTREME SOUTHERN REGIONS OF AUSTRALIA MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...☐

Conditions are not yet favorable for widespread observations of auroral
activity, but may become favorable over the next 6 to 12 hours. An unexpected
solar disturbance arrived near 20:30 UTC on 22 January. The magnetic fields

within the disturbance are currently holding the activation of auroral activity at bay. However, should the fields rotate from the current strongly northward orientation to a strong southward direction (which may be observed sometime in the next 6 to 12 hours), auroral activity could intensify substantially and provide fairly widespread observations of auroral activity from middle latitude dark-sky sites.

User's of the Ge+lert software will be able to monitor current auroral activity conditions much more accurately and in near-realtime. Consult: http://solar.uleth.ca/solar/www/geolert.html for details on this software.

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO: http://solar.uleth.ca/solar/www/auroras.html

FOR REALTIME NOTIFICATION OF AURORAL ACTIVITY, WE RECOMMEND THE GE+LERT ALERTING SYSTEM SOFTWARE AT: http://solar.uleth.ca/solar/www/geolert.html

(ANYONE WHO PURCHASES GE+LERT DURING THE MONTH OF JANUARY WILL AUTOMATICALLY RECEIVE ONE YEARS E-MAIL SUBSCRIPTION TO ANY OR ALL OF OUR E-MAIL PRODUCTS, INCLUDING THESE AURORAL ACTIVITY WATCHES AND WARNINGS)

** End of Watch **

So, the net vs. no-nets war still continues on ham radio? What is the issue
with nets anyway? I talk to people, sometimes I check into nets. Where is
the big controversy?

I am looking for a copy or reprint of an article that appeared in
Electronics World about Hidetsugu Yagi. The particulars are:

"Pioneers: Hidetsugu Yagi," Atherton, W.A. Electronics World 320.44
(January 1989), 90.

Reprints are available from the publisher, but I am not all that keen to
spend GBP 4.50 (about USD $7.50) for the article if I can help it.

If anyone can copy and mail me the article I would gladly pay for
the copying and postage costs.

73,

Adam Adkins, KM5SS

Glad to hear it, Colin. Thanks for weighing in with your opinion.

> course. :) and you don't need to know morse code. I LOVE morse code! I just
> don't get to use it often because I only own a 2 meter FM rig, and the CW nets
> aren't modulated in my area- only one or two, occasionally.

If you enjoy morse, you can get an inexpensive QRP kit or rig and
get out on the air with CW. Or you might consider looking around for
some of the older tube rigs (Heathkit, etc.) that often go for
considerably less than USD $100. Get yourself a straight key or a used
paddle (most likely you will have to build a keyer if you go with the
paddle) and you are off to the races for less than you would spend for a
used 2 meter / 70 cm HT. You will also get the opportunity to mess with
wire antennas (cheap!) and learn quite a lot.

> Most teenagers are
> dead broke- you won't see us buying very much shack equipment. We buy,
> naturally, what is cheap, plentiful, and allows us to talk to local operators,
> without going broke. Behold the 2 meter transceiver.

Colin has hit on a major piece of a youngster's problem with ham
radio. When I was 12 I was dying to get my license and start playing.
Unfortunately, my bank roll was pretty much non-existant, and there were
no elmers (that I knew of) to give me the advice I needed to go on the
cheap. Thus, my interest went on hold for 25 years. When I did get my
ticket, and discovered that it really didn't take as much money as I
thought it would. (Or wouldn't, if I didn't like new toys so much...)

73,

Adam Adkins, KM5SS

1491. Yes, W & W will hang up on you

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-22 00:00:00 UTC
From: Gary <gary@carcs3.wustl.edu>
Message-ID: <36A93788.FC834EDC@carcs3.wustl.edu>
Source record: 152678

I had my own bad experiences with W & W.

The first was when I found that both fast chargers I had purchased from them
failed to operate about 20% of the time. I suspected some design flaw and sent
one of them back. W & W returned it to me saying simply that it "worked within
specifications" and not addressing the problem I described at all.

The second was when I called to ask about recycling the batteries (they have a
little "recycle" emblem on them) and to order a new battery. The conversation
went like this:
ME: "Hi, one of my batteries just went dead and I...."
W&W: "We don't take them back."
ME: "Okay, I understand. I saw that there is a "recycle" emblem on the
battery and..."
W&W: "We don't take them back!"
Slam.

So Mr. Webb is correct. They do hang up on you.

Your problem sounds like a series of errors..any company can have a bad
day(so to speak).
I've dealt with W&W for a number of years , and I've NEVER had a problem
with them-and with one minor exception, several other people that I know
are happy with W&W as well.
BTW, the minor exception was a molding error on one pack that was so easy
to fix at home, I solved the problem in about 1 minute with hand tools.
Contact them again-I suspect the problem will be resolved easily.
Good luck.

I too have dealt with W&W for years, bought tens of packs including ones for camcorders and cordless phones with very good results, minor problems were remedied with much satisfaction, you should approach them again and try to resolve this, but do what you must, remember you get more flies with sugar

Same here, I have a cushcraft 5 element yagi 4 feet above a 4 element
10 meter monobander and they both seem to work well together. The
reason I have it stacked like this is because its all up on a push up
mast and I don't want to have much on the rotor. At the same time
the 10 meter yagi will look like "ground" to the 6 mtr yagi, so keep
in mind you may want to think about keeping them a half wave apart at
the lowest frequency. (this is if you want to split hairs)

Hello Ed -- here is a snip from an article about the origin of 73:

"In 1859, the Western Union Company set up the standard "92 Code." A
list
of numerals from one to 92 was compiled to indicate a series of prepared
phrases for use by the operators on the wires. Here, in the 92 Code, 73
changes from a fraternal sign to a very flowery "accept my compliments,"
which was in keeping with the florid language of that era."

For more info on the origin of 73 and more numbers -- see URL:

>What do you think?

Probably not a good idea, because the 6m directors will be affected by
any 10m elements placed ahead of them. For optimum performance on 6m it
may be necessary to use "forward stagger" to place all the 6m directors
ahead of the 10m director - which of course means a longer boom.
W4RNL's web site contains a lot of good modeling information on
interlaced yagis: http://web.utk.edu/~cebik/radio.html

Regarding the original question on stacking for different bands, there
is information on my web site (see below).

Hello Robert:

As an individual employed in the computer sciences I cant believe the hoops some people are jumping through because of Y2K. I heard of people converting cash into gold bullion, buying generators, and stocking up on Dinty Moore Beef Stew. This is a field day for all the "doom and gloom" guys, God knows there are enough of them with amateur licenses. Ive been listening to some of these guys for the past thirty years, way before Y2K. Its a good thing Y2K came along because they would still be on the Nostradamus bandwagon. Dennis Miller said it best: "Is it just a coincidence that Y2K contains the letters KY??".

So what's the big deal about "early access" if there are only 14 other stations to talk to? Sound like all the thrills of a closed repeater.

I have been listening to SW on a 1949 Zenith TransOceanic that I rebuilt 20 years ago. I'd like to get a new, portable unit and have narrowed my choices down to either the Sony ICF-SW7600G or the Grundig YB 400PE. As far as I can tell the sets are similar in may features. They are about the same size andd have similar features. The main differences seem to be the Sony's synch detector and tape output jack versus the Grundig's additional presets, more easily visible clock, included AC adapter and slightly cheaper (in the US) price.

Has anyone compared the two sets? Any loyal or dissatisfied owners?

A word origin research column once appeared in newspapers. It was called
"Word For Word". For what it's worth, they reported that the word "ham"
applied to amateur radio operators is, "no doubt", simply a play on the
word "amateur". My mentor ham told me the same thing in 1952. He said it
had to do with how some English hams pronounce the word "amateur" as
'amateur or hamateur.

I find this very hard to believe. In all my dealings with W & W they
have gone out of their way to accomodate me even when to my
embarassment I found I was truly in the wrong. These people are
good people selling quality stuff. I buy lots of batteries for
a local public safety organization W & W has been my supplier of
choice for several years.

I mentioned "On-Frequency Repeaters" in another thread (in rec.radio.amateur.misc), and received a few emails asking for more info about them.

An On-Frequency Repeater (OFR) retransmits on the same frequency as it receives on, but unlike the simplex repeater, it transmits and receives at the same time!

How can it do that ?

Lets say you're trying to provide coverage into a shopping mall. You know, steel reinforced heavy duty concrete - loads of rf attenuation - strong signal outside, but lousy signal inside.

You can install a receive antenna on the outside of the building, install a transmit antenna on the inside, and install an OFR somewhere in-between. The receive antenna is usually high-gain, directional, and pointing at the nearest hilltop/rooftop base station.

Providing the signal from the "donor" base station (on the outside) is a few dB greater than the signal from the OFR's own transmit antenna (on the inside), you can receive, amplify and transmit on the same frequency at the same time.

There are two types of OFR.

First there's a simple "straight through" amplifier - no i.f. stage, no squelch, all filtering done by large cavities at the frequency in question. Gain can be 80 - 95 dB providing the path loss between the two antennas is about 10dB greater than the gain of the amplifier. This type is useful where a number of transmissions on adjacent channels require amplification. Needs to be very linear to do this. Typical signal delay is about 12uS.

The second type, looks like a normal superhet receiver up until the i.f. stage, (where the selectivity is obtained), and then it remixes the wanted signal at i.f. back up to its original frequency. This type produces a constant output level regardless of the strength of the input signal, hence the overall gain of the device varies. It will often also have a squelch (mute), which is set at a high level so that only the donor site opens it up. Due to the i.f. filtering, the absolute signal delay can be as much as 120uS.

Unless you're talking microwave frequencies, it is generally quite difficult to obtain 90dB path loss between the rx and the tx antenna - almost impossible with antennas mounted on the same mast - but in the

case of an antenna inside a shopping mall, or a tunnel, the idea becomes quite practical.

I've never yet heard of an OFR being used for amateur purposes.

I did something similar in a mall store for one way signals.
I needed a good picture on several TVs without running a cable to each.
(This was also for FM Radio and other portable stuff.)
I put a rather good broadband ant on the roof then a good dist. amp inside
with a small homemade discone inside.
The roof of the mall was metal, so I had good isolation, and reception was
one way, but sure made for a good signal inside.
I suppose I could have used a passive repeater like those used in elevators
in a hospital, but I only needed a clear picture inside, plus I wasn't too
sure of the originating signal strength of the radio site to be sure and get
through considering the db loss from ant to ant.

I'm just curious Bubba, have you submitted a request to the FCC for experimental operation on a frequency outside of the current ham bands and been denied? As a U.S citizen you could petiton the FCC yourself, you don't have to be the ARRL. If not why are you so negative about the ARRL doing it whose results may possibly open another amateur band, or provide data that may help keep existing ones?

No QRM heaven? heh heh, yea they can work all other amateurs involved in the test, 15? 20 amateurs?
I suppose with respect to this particular experiment it pays to be an ARRL Net member doesn't it.

Very interesting post. I was wondering, could the same thing be achieved with CTCSS using one tone to activate the repeater and another sent by the repeater to a tone squelched receiver?

Just curious. Seemed like it might work but I'm no expert on such things.

I couldn't help but respond to this one :)

Back a few years ago, I put up a ham repeater on a local ridge. I noticed that there was a lot of static on received signals, even on FM and soon concluded that it was power line noise.

After several attemps at calling the local power utility, I was promised that someone would take a look at it within a few weeks. I called a month later and found that they had visited the location and found no noise problem with their test equipment. After a few more calls, I was able to get them to check it again - still they said they found nothing (the noise was basically constant all the time). Frustrated, I went out with a sledge hammer and a AM receiver and found the poles that were the source of the noise. Called the utility a few more times - nothing, they said they had already concluded that there was no problem. I then proceeded to call Industry Canada (Canadian equivalent to the FCC) and had an inspector come out with me to detect the noise. The inspector was amazed at how strong it was as it propogated for nearly a mile down the road from the poles. I-C contacted the utility and they finally sent out a truck to fix the problem - but still they didn't stop the noise. Finally, I gave up and moved the repeater....

Six months later, across the road from where I had installed the ham repeater, the local cable company installed a cable headend to pick-up the local off-air signals. To my surprise when I went out to see this new installation, there were three utility trucks at various locations along the road making repairs to their poles....

Best of luck to ya!!!

Hi,

Two years ago I bought "Now You're Talking" with the intention of
getting the technician license. Although I read most of the book,
I spent my weekend building a telescope instead of taking the exam.
In June of 97 the question pool in my book expired and I kind of
got cold feet about taking the exam as a result.

Today I downloaded the question pool from the ARRL FTP server and
I'm going to review it. Do I need a new copy of "Now You're Talking"
or will my old book plus the new question pool be enough?

This is the story of Ham:

There was once a group of radio operators in the 1910's who frequented a diner outside Flushing, NY. They would always order large kosher turkey sandwiches with all the fixings. The waitress noted "Bob" (a bit unlike the rest of his friends, all Jewish, all members of the newly formed ARRL, traffic handlers and contesters) ordered a ham sandwich and said, "Bob, you are what you eat. All your friends are turkeys, why aren't you ?". Bob said "by golly ! (as hams often do) you're right. But I'd rather be a ham than a turkey."

->
->
-> An On-Frequency Repeater (OFR) retransmits on the same frequency as it
-> receives on, but unlike the simplex repeater, it transmits and
-> receives at the same time!

Such things are often used as low-power broadcast TV repeaters, where
the service area doesn't warrant installing a "proper" relay station.
They often go by the name of "active deflectors".

-> I've never yet heard of an OFR being used for amateur purposes.

I wonder what the licensing requirements would be for a 2m or 70cm active
deflector?

> special FCC favors !

Sure >>intentional<< QRMers are wrong, thats not the POINT.

Why does the ARRL give these "OFFICIAL ARRL" net members who ought to just
IGNORE the lids turn on the dsp and sod them, why give them special FCC
enforcement ACCESS and now access to a experimental band ? What about asking
OPENLY for volunteers and never mind the NCS Robots, I bet most of who will
be easily recognizable people who accessed 30 and 17 early also, back in the
80's.

They get special favors from FCC thru ARRL, NAME one other group that is
being kissed up to like traffic handlers and so called emergency net members.
Guess ARRL felt as usual that their handpicked pool of 15 was good enough.
Guess thats how that "REPRESENTATIVE" org likes to do things... behind closed
glass doors so you can see but not PARTAKE.

>

On a constant current charge for good cells at 20deg C the termination point is 1.55V per cell. 1.2 is the average loaded voltage. 9.6/1.2=8 8*1.55=12.4 11V is fine straight after charge. However Having spent amny years working with battery technology. Fast charging will degrade NiCds. I trickle when ever I can!

Cheers
Eric

Simplex repeaters as currently defined are just not practical, except perhaps for emergencies where nothing better is available. EVERYONE on the frequency has to know whats going on or chaos ensues.

A few decades ago, I came accross a REAL simplex repeater, in Arizona, I think. I don't recall the specific location. The repeater was located on a nice tall mountain with a small sharply defined peak. There were no other mountains near this one site. The receiver on 146.94 MHz was located several hundred feet down the south side of the top, and the Transmitter on 146.94 was located on the North side. They were connected by long wireline. There was absolutely no Tx signal getting to the Rx side since there were no nearby hills for which the signal to bounce off of. I wasn't around long enough to fully evaluate it, but it seemed to work quite well at the time I was passing through the area.

Hello folks,

I hate posting one of these messages to any kind of forum but these folks leave me no choice.
Their representative hung up on my xyl when she was trying to resolve the matter to the satisfaction of myself and the company. Hence, I have no choice but to post it here. I hope it serves as a warning to others who might consider doing business with these people.

Last Thursday I ordered a rapid charger for my high capacity battery pack for my Alinco dj-582th. The batteries I have are ebp-28n.

Since I'd heard about this company and heard that I may be able to get the charger I need from them at lower cost than the Alinco charger, I called them. I asked them which of their models I need for the battery pack I have. The lady told me I need model number, MC1a/12/ebp28n I called back and ordered one the next day.

Well, today (a week later almost) I received a charger which is good for an ebp-10n to ebp-22n, not a 28n.
The batteries I own have three contacts for the charging cup. This charger has two. Also, if I'm correct, the 22n and smaller numbers are smalller packs, right?

Since they want me to send them the battery---I have no receipt, just the receipt for a money order which could have gone anywhere, I will have no working charger and I don't believe these folks will actually pay me---can't blame me after my experience, I don't know how to resolve the situation, but I'm not impressed with the way they do business. Had I known I would be lied to when I placed my original call I would have dealt with my friendly Alinco products dealer for an OEM charger.

All I want is a rapid charger that will work with my packs. Since these folks told me they had one that works, they should provide one that will, and I should get it shipped air freight to my door at no additional charge. Their representative hung up on my lady this evening as I stated earlier, and they don't have the guts to answer their emails.

I am prepared to contact the New York state better business bureau as well as file court action. It's not about the $79 anymore, it's about just being plain mad as hell at getting ripped off.

73 and sorry to have to post this here guys.

> BY Golly, its moments like these I wonder whether ARRL is full of it. How do

THE MEANING is I'm TIRED of this group getting special favors from the FCC.
The GOAL of a 5 mhz band is FB, but the way they do it is BS, just like they
got themselves EARLY ACCESS TO 30 and 17 years ago.

The FCC has issued an Experimental Radio Service license to the ARRL to
permit two-way tests in the vicinity of 5 MHz--the most likely site of the
next amateur HF band. The license, bearing the call sign WA2XSY, was issued
January 8. A group of 15 current amateurs in various parts of the US and the
Caribbean will conduct experimental, two-way RTTY and SSB transmissions
within the band 5.100 to 5.450 MHz. To avoid interfering with existing
services, the participants will confine their operations to the
least-populated 50-kHz segment.

"The idea is to show that an amateur allocation there will improve
our emergency communication capabilities by filling the gap between
the 3.5 and 7.0 MHz bands," said ARRL Executive Vice President
David Sumner, K1ZZ. Sumner pointed out that several of the
participants are phone net members in the Caribbean and Gulf area
who frequently handle hurricane-related traffic and now must
alternate between 75 meters and 40 meters. Other participants are
members of a nationwide digital data-forwarding network.

The Experimental license is good for two years. Two studies by the
National Telecommunications and Information Administration
(NTIA) include an allocation at 5 MHz among the future spectrum
needs for the Amateur Service. The subject is not likely to show up
on the agenda of a World Radiocommunication Conference for
several years, however.

Participants in the WA2XSY experiment may run up to 200 W
effective radiated power. Similar multiband trap dipoles capable of
operation on 80 and 40 meters as well as at 5 MHz will be employed
at each station location. Operation by participants will consist of
short transmissions to determine propagation characteristics.

Participating stations are located in New Hampshire, Tennessee,
Ohio, Florida, Mississippi, Wisconsin, Indiana, California, Utah,
New York, Texas, the US Virgin Islands, and Maryland.

AMERICAN RED CROSS DISASTER SERVICES
HIGH FREQUENCY (HF) RADIO COMMUNICATIONS

The New London Chapter House of the American Red Cross recently received a CLUB Radio Station License and is now listed with the Federal Communications Commission as KB1DJO

A weekly radio NET is conducted Wednesday evenings at 2000hrs EST on 3.915MHz in the 75meter band and again at 2100hrs on 14.325MHz in the 20meter band.

Valuable information is repeated each week on the business of Communications and Disaster Relief. This informational program provides interest, learning, and on the air experience. Net practice sessions serve as continuing training of operating discipline for volunteer radio operators.

This High Frequency NET serves to benefit the emergency response communications network team when called upon in time of actual civil disaster by providing the means for testing operability of equipment that would normally be made available to the American Red Cross during an actual event.

If anyone is interested in learning more about the American Red Cross and its activities you may call Sue Rochester, Director of Disaster Relief Services at 860-447-3248 or write to
150 Eugene O&#65533;Neill Drive
New London Connecticut 06320.

Source record: 152860

Hello
I have a dead TS 930 that I would like to trade for a good working Moblie HF rig (Kenwood TS 140,130,430,830)or others. Here is what I know about what is going on with the rig. The signal board is good. This is the main board in the rig. It contains the IF and so on. The digital board is also fine. The RF board is good This is the board that controlls the recive and transmit freq, this also the last stagw befor the signal gets amplified. All the controls work on the front panel. The main power transformer is good. The main power rectifier is good, however I'm not sure about the regulator(power transistors).
Now lets talk about the rigs problems That I'm sure about.
1 the power supply board is shot It needs to be replaced or rebuilt. R4 and R5 are 2.2 ohm quater watt resistors and they are gone, toast. Some of the other componets are craped on this baord.
2 the final stage has some problems. The person who worked on it last before me forgot to stick the plastic sheild between the driver transistor and the heat sink. Over time the grease between the parts broke down and caused a short. This in turn took out R9 and R10. They are one half watt 22 ohm resistors a STV-3H(o) viristor. The NTE and ECG replacement part are ECG 605a and NTE 605a The differance is they are in a different package. The specs are the same though. I don't know what damage was done to the MRF 422s (finails) or the MRF 485 (drivers) R9 and R10 are in the driver section.
3 There is a resistor pack between the RF housing and the antenna tunner. There is a 33 ohm 1 watt resistor that needs to be replaced in that pack. It is the very first one in the pack.
4 The antenna tunner needs to be reajusted to tune again. To be 100 percent honest with you the tuner never worked right since I traded for the rig.It would work sometimes and sometime it wouldn't work at all you be the judge.
I think that I have explained farly well what is going on with this sick old rig. This rig is for the advanced radio buff. If you think that you can use this rig for parts or that you might be able to fix this rig drop me a line.
oris@dirtball.com
oris@bellsouth.net
Or give me a call (706) 789 3505 my name is Oris and my call is N3CND
Thanks for taking the time to read this.
I also have a good working TS 820 I want to trade and a
Dentron 160 10L HF amp, and a Clipperton L amp. Give me a call.

There are a few sources, but why not just order them direct from the
USA?
There is a web site www.screws.com but it is not active.
Dan's Small Parts (really!) would be a good starting place.

So, is that 3.8945 MHz, Cecil? If so, then the first "dot" is a
decimal point. Or, how about 3894.5 kHz? Now the second "dot"
is playing the role of a decimal point.

Since we're on the subject.
Can you describe the "On-Frequency Repeaters" You mentioned a little more.

I had a theory about simplex repeaters, doing basically the same thing as the Radio Shack one does but on a much faster time slice. Like maybe 5 msec. Would it be possible to switch a Transmitter on and off that fast?

Any way we can set up a few of the assholes
such that they might get shot by the US Marshals
that come out with the FCC?

:DX302MAN News Bulletin
:
:WB2OTK was visited by FCC officials according to reports made on 20 meters.
:AF2Y stated that he is extremely upset with the FCC for going after WB2OTK.
:WB2OTK was suspected of running illegal power and jamming QSO's on 20 and
75
:meters. According to reports, OTK was running an illegal amplifier at
illegal
:power levels. Other amatuers on 20 meters have stated that they also
:haverecieved letters in reguards to their operating practices.
:W4JYZ--akadumbass Donny----stated that he recieved a letter telling him
that he
:ison notice to stop his illegal activities. If you listen in on 14.300
or313
:youwill hear something that you have not heard for over
10years-----Civility!
:
:Manufacturing and/or marketing of these amplifiers are a violation of U.S.
:federal law and grounds for revocation of Mr. Whiten's amateur radio
license
:(WB2OTK). Mr. Whiten is a habitual offender that has previously been cited
:by the FCC for numerous offenses. These actions against Mr. Whiten include
:the issuance of an NAL for $10,500 for willful and malicious interference
:caused by one of his "custom built" amplifiers. To file charges or issue a
:complaint contact the Federal Communications Commission at: rlee@fcc.gov
:Tell the FCC that you want Mr. Whiten's illegal activities to cease. Tell
the
:FCC that you want all of Mr. Whiten's unpaid fines to be collected. Tell
the
:FCC that you want Mr. Whiten's amateur radio license to be revoked for just
:cause. Tell the FCC that you want all of Mr. Whiten's illegal amplifiers
and
:bogus "RFI Filters" to be confiscated.
:
: It looks as if the sad state of affairs that has been amatureradio is now
:starting to be cleaned up. Congratulations to all who havebeen involved in
the
:campaign to clean up ham radio. We are winning thewar.

I've been looking for interesting ways to sell stuff on the internet.

Your method does address the growing problem of people saying they want it
and not following thru.

If ten people send you money, you'll have nine very angry people. How do
you deal with this?

My first thought was that it exposes the buyers to much greater risk of
fraud. One could get
10x the price and keep it all. After thinking about it a little, I guess a
person could always
promise 10 people that they bought it and get the same place.

Does it reduce the number of interested people? I'd personally never send
any money on a deal
like this. Just too much risk and too low probablilty. If you lived in
same town and I could
pick it up, then it might work to my advantage.

So, how does it work in practice? Does the grief you get outweigh the
potential delay of the
first person not following through?

miker

1576. Still need parts for ICOM-47a UHF Mobile

I am still at a loss and need help!

I hope somebody has a dead Icom-47A sitting around.
I need the two upper right push button switches.
The switches are mounted on a small pc board.
If it is with the plastic buttons, ok.

If you have this, or a dead 47A that has these parts and
you want to rid yourself of it, email me, removing the
NOSPAM in front of my Email address. The switches
and are the ONLY thing I need.

>Hams will say this is a troll or a fake but it's really a true indication of
>how real people look at hams. Hams tip cheep or not at all. And they smell bad
>too.

Oh, I would say that most people are completely unaware of even the existence of ham radio. Except, perhaps, they might know what it is when seeing the ham radio shots in the movie Contact, perhaps -- which I think was very positive. To me, the association with science/engineering, however tenous, is the best bet for the future. The ARRL pitch for the last 20 years, "Try ham radio, it's not nearly as hard and expensive as it looks!" I think is a bit of a loser.

The joke about 'cheap' engineers is known partially from the Dilbert cartoons, but aside from that is mostly inside humor. I'd guess that a real survey would find that ham radio comes up in the 'mostly harmless' category, among the general population. Which isn't necessarily a bad thing. My friends when I tell them about ham radio stuff seem to find it kind of charming and amusing.

You know, I wish the ARRL could find a cartoonist as good as the guy who drew all those old comics for the 50's and 60's era mazagines. Those silly little drawing, I think, encapsulated so perfectly what is fun and absurd about ham radio. That's what's been lost, I feel, in QST in recent years. It makes me a little sad, just thinking about those older smaller issues.

It won't be long before WB2OTK is taken off of the air. The FCC Field personnel, Mr. Hollingsworth, and the Local Sheriff, made a surprised two hour vist to Porky's rent-a-house at 2 Notch Trail, this afternoon - 1/23/99. Hmmm.....Now, why would you think that they made this visit.......

Bye, Bye Porky..... It's long overdue!

today,

Local sheriff? An FCC agent is always accompanied by a U.S. Marshall.
Eat some prunes.

Experimental licenses do not fall under the Amateur Radio Service,
and that 5 MHz segment is not an amateur band, so what's your complaint?
Are you jealous? Did you apply for an experimental license so you could
assist in the experiment? If not, why not? Why didn't you write up a
research proposal long ago? It was announced three years ago that a
5 MHz segment was under consideration for award to the ARS - I've
reposted that bulletin several times since (see below for another
posting).

The ARRL NCSs have already passed rigorous screening and were probably
deemed the best organized group for conducting communication tests
due to their past performances as NCSs. What we *don't* need is some
unorganized group of free-lance experimenters ruining any chance of
us acquiring that band.

Lest you forget, some 85 years ago the government allowed special
League stations access to a "forbidden" wavelength so as to test
the possibility of transcontinental communications. Those stations
were hand picked, chosen due to the quality of their (home-built)
equipment, antenna systems and other criteria.

(I've always thought exams should include questions on amateur radio
history so new licensees would gain some appreciation for what others
before them had done to insure that our hobby/service would exist even
today.)

Date: Tue, 17 Dec 1996 10:20:07 -1000
From: w1aw@arrl.org
To: QST@hawaii.edu
Subject: ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur
QST de W1AW
ARRL Bulletin 97 ARLB097
>From ARRL Headquarters
Newington CT December 17, 1996
To all radio amateurs

High Frequency (3-30 MHz) Spectrum Planning Options, a planning document released December 13 by the National Telecommunications and Information Administration, says the HF spectrum is flexible enough ''to accommodate most, if not all,'' demands for additional HF spectrum, including new and bigger HF ham bands. The NTIA is an Executive Branch agency in the Department of Commerce that's responsible for developing telecommunications policy and advising the President on telecommunications matters. The NTIA's latest report is a follow-on to an NTIA study released in March 1995 (see QST, June 1995, page 75).

The Options report addresses spectrum availability and long-range planning options for services that were identified in the earlier report as needing additional HF spectrum--including Amateur Radio. The report cites a potential 900 kHz or so of expanded or upgraded allocations for Amateur Radio in the HF spectrum, including:

+ an exclusive, worldwide allocation at 3500 to 3800 kHz
+ a new band at 4945 to 4995 kHz (additional technical studies would be required)
+ an ''aligned worldwide'' allocation at 6900 to 7200 kHz
+ expanded worldwide, primary allocations at 10100 to 10350 and 14000 to 14400 kHz
+ expanded allocations at 18068 to 18318, 24740-24890, and 28000 to 30000 kHz.

Some of the potential expansions proposed for amateurs and broadcasting are mutually exclusive or could involve sharing by the two services. These include the potential expansions at 30, 20 and 17 meters. According to the report, ham radio allocations account for 13.1 percent of the HF spectrum (3 to 30 Mhz). ''There are no current plans to auction any HF spectrum,'' the NTIA report states, but notes that additional allocations for ham radio would come at the expense of other services--primarily fixed, fixed-mobile and broadcasting. ''The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz (bands) appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally,'' the report said. Changes in the 80 and 40-meter bands ''will require the inclusion of these proposals in US preparations for future WRCs,'' the report added. A requested allocation at 6900-7200 would serve ''to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band,'' the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz ''a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band.''

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some ''exclusive''

allocations--might be another option.

Calling ham radio ''the oldest radio service'' and one that ''pre-dates regulation,'' the NTIA report casts the hobby in a favorable light. ''Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design.'' The report goes on to say that ham radio ''continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services.''

Over the last 4 months I have not been able to find 73 Amatuer Radio magazine on any of the newstands. I've looked in about 5 different states and checked the major book chains, B&N, BaM, etc with no luck.

Does anyone know if they have quit publisihing? I know the editor, Wayne Greene was pretty up in age but I haven't read anything about him dtopping the publication or something happening to him.

Any Ideas folks?

Johnny

AM Radio and ham radio's ART BELL resurfaced on the Friday "Millennium" on FOX.

NO, there were no ham rigs. Yes, he did speak. Yes, he played himself. Rumour has it he will be joining The Lone Gunman while the actor who plays Frohike is on maternity leave.

First time a ham has been in a SPEAKING TV role ?

1593. HELP: TS-140S TX Problem!

Newsgroup: rec.radio.amateur.misc
Date: 1999-01-23 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <78bejb$oc8$5@callisto.clark.net>
Source record: 152690

Hello. I have a TS-140S that I use as my main HF rig here in the shack. But recently I have been experiencing a real problem with the TX on it. I'm pretty sure that this is not the lose chip problem that most TS-140S's had. Here are the symptoms:

1. The radio will TX a short burst of power on SSB (if you yell into it when you first key the mic) but then the power will drop down to just a few watts (if anything) even when the radio is set at full power

2. The radio will TX full power on AM/FM, but I can't modulate it at all. I'm just transmitting a carrier.

3. It will also TX full power on CW, but according to another ham that help me with this problem he can't pick up any dit's or dah's on his SW Receiver even when I TX at full power (he is just a few miles away). But on AM he can hear me clicking it on and off.

4. I've proved that this problem is in the radio because I have used several different antenna, bands, and microphones.

5. And if it's any help this radio has the MARS/CAP mode and the CW 500 HZ CW filter already installed.

I would appreciate *ANY* help in this matter. Please e-mail me if you might have the answer. Thanks a lot for reading.

Check the internal wiring to the mic plug and work back from there.
Kenwood is well know for cold solder joints. You might want to look at
audio circuit. I think that its the internal mic wiring because if the
audio section of the rig was bad you wouldn't get any sound from the
speaker I would think.
I hope this help you

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

Ed, Jim and Group,

>>>Keep us posted Ed, perhaps we could send in listeners reports if needed.<<<

Ditto. Would be glad to do some QSLing if I know when and where to listen.

By the way...are the other stations going to be "units" of the experimental call, or will they each be issued individual calls and if so, to which state is each call issued?

Where are you first of all? Just curious. I ALWAYS tip VERY well personally, that is IF I get good service. I still tip well even if the service isn't that decent. Your lumping all hams together based on a few people in your restaurant. I never bring my radio into the place either, it's not glued to me. I DO have other things to do in life besides radio. It's a hobby for me, not a lifestyle.

You sound like a troll but I thought I'd respond anyway.

>
>2. The radio will TX full power on AM/FM, but I can't modulate it at all.
>I'm just transmitting a carrier.

Items one and two would lead me to follow the audio path from the microphone, you need a schematic, and an audio amp, you could even use the "phono" input from a stereo if it's old enough to have one. Tape the mic closed and transmit (low power) with music or something into the mic, use a dummy load of course. Probe the mic connector then start working you way back, as you probe apply a small amount of pressure to the PC board to make it flex (very slightly) and listen for any changes.

>3. It will also TX full power on CW, but according to another ham that
>help me with this problem he can't pick up any dit's or dah's on his SW
>Receiver even when I TX at full power (he is just a few miles away). But
>on AM he can hear me clicking it on and off.

Item 3 wasn't very clear, When YOUR in the CW mode does he hear you clicking on and off while HE is listening in the AM mode? or Does he not hear anything when YOUR in the CW mode but can hear your carrier when you transmit in the AM mode?

Not that I want to see this, but if its the same FCC that regulates broadcast radio and TV, then there is no reason that Stern-like spew, and humping-like motions under sheets shouldn't be allowed on amateur radio and tv.

Personally, I think this crap should banned from public broadcasts and confined to subscription services like cable tv, satellite tv.

```
.....................................
: RALEIGH (NC) AMATEUR RADIO SOCIETY :
: :
: HAM RADIO LICENSE CLASS :
: :
: BEGINS MONDAY, MARCH 1ST, 1999 :
.....................................
```

The Raleigh (North Carolina) Amateur Radio Society will teach a class leading to the Technician Class ham license (NO Morse Code required!). This class is for everyone interested in ham radio -- you don't have to be an electrical engineer to get a ham license!

We'll have an introductory class on Monday, March 1st, at 7:00 pm. Then, the class will meet Monday and Thursday evenings at 7:30 pm for six weeks until April 8th.

Optional Morse Code study is available.

It will cost you about $10, plus $15-20 for materials. Class will be held at the NORTEL education center, on route 54 near I-40, out past the fairgrounds in west Raleigh.

For more information, visit the RARS web site at:

http://www.rtpnet.org/~rars

or contact:

Jeff Wittich AC4ZO
phone 919-362-9456
e-mail jwittich@pagesz.NOSPAM.net
(remove the NOSPAM to reply)

73,

Gary Pearce KN4AQ

>be easily recognizable people who accessed 30 and 17 early also, back in
the
>80's.

I'd like to know what "special enforcement ACCESS" "OFFICIAL ARRL" net members have.

I'm sure they did ask openly for volunteers (from their group of choice) but since the ARRL is the one who petitioned for the access don't you think they should be able to pick what group conducts the experiment? If bubba the fat ham went to the trouble of lobbying the FCC, proposing experimentation, and being granted permission to do it. Would you pick your buddys to help you with the experiment or just let any yahoo in on the deal? Get it?

>They get special favors from FCC thru ARRL, NAME one other group that is
>being kissed up to like traffic handlers and so called emergency net
members.
>Guess ARRL felt as usual that their handpicked pool of 15 was good enough.

I guess they did, your suggestion would be what? Before you answer, do you have any clue what data the FCC is asking for? What terms were issued for this 2 year experiment? I sure don't, but then agian I'm not complaining.

>Guess thats how that "REPRESENTATIVE" org likes to do things... behind
closed
>glass doors so you can see but not PARTAKE.

It's a pretty simple concept here bubba, the ARRL has lobby power so they get favors, don't like it? Start the TFHA The Fat Ham Association, publish a terrific monthy magazine called Fat Ham News, create an awards program, outgoing QSL program and establish and coordinate your own VE system, provide a host of other services to the amateur community and build your membership to thousands of hams. Now YOU TOO have lobbying power and can petition the FCC for special favors, and YOU get to pick who YOU want. See it's not so difficult afterall.

IN THIS EDITION:

* +Hams respond as killer tornadoes rake South
* +Board seeks new technology for future
* +A new name for the ARRL?
* +League gets 5-MHz Experimental license
* +ARRL files "restructuring" reply comments
* Solar update
* IN BRIEF: This weekend on the radio;
* Papal visit special event;
* New Canadian prefix; Australia Day prefix;
* Joe Walsh, rock star/Collins collector;
* ULS Final Order published; QST Cover Plaque Award

+Available on ARRL Audio News

HAMS RESPOND AS KILLER TORNADOES RAKE SOUTH

Hams in Tennessee and Arkansas responded as unusual tornadoes threatened, then struck, this week. The death toll from the freak storms stood at 16 as of January 22, and losses were expected to top $1 billion. A call went out January 22 for additional ham radio volunteers to assist emergency operations in Tennessee in the storms' wake.

Tornadoes in the Jackson, Tennessee, area January 17 killed eight people. Another eight died when tornadoes struck in the vicinity of Little Rock and White County, Arkansas, January 21. The National Weather Service called it "an unprecedented outbreak of tornadoes for January."

Arkansas Section Manager Roger Gray, N5QS, in Searcy, reports he was up all night and observed four or five funnel clouds, but he estimated that at least 30 tornadoes swept through the area. Gray has been actively managing the ARES operation. "We have had an incredible response from the amateur community," he said. He estimated that up to 60 hams were active on VHF and HF nets. "We have been running nets almost continuously since 4 o'clock yesterday afternoon and no end in sight," he added.

One problem, he said, was that access to the badly-damaged town of Beebe was extremely restricted "and contacting people in that area is extremely difficult right now." In addition to health-and-welfare and damage assessment traffic, he said Amateur Radio was filling the gap as long-distance telephone circuits have become overloaded. "That's why we're handling as much traffic as we are." Damage was primarily confined to four areas, and he expected ham radio involvement to conclude within 24 hours.

Gray said five weather-spotting net control stations were active. The EC in charge, James Wiles, KK5WM, in Beebe, suffered damage to his house and had to move operations to a Red Cross shelter, Gray reported. Hams are expected to become involved in damage assessment.

The National Weather Service confirmed that "between two and three dozen" tornadoes damaged or destroyed homes and businesses in Little Rock, Beebe, Searcy, and in other locations to the north and east. Large hail also was reported, including "baseball to grapefruit size hail near Hot Springs and around the Little Rock and Conway areas," the NWS said.

"Another wild night in Arkansas," said ARRL Vice President Joel Harrison, W5ZN, in Judsonia, who reported "lots of damage" in his area. "I have to tell you, in my 41 years of living here, I have never seen storms like we had last night," he said. Harrison said the first line came through around 5 PM, "then another, and another, and another for what seemed like every half hour till about 10:30 PM."

"The damage in a 10 mile radius around my home is horrible!" Harrison said. Arkansas State University in Beebe--where his son, Mark, attends school--had extensive damage. "There is considerable damage in Little Rock, even to the Governor's Mansion," he added.

Mark Harrison, KC5YNE, said most of the town of Beebe was damaged or destroyed, and eight tornadoes hit White County alone. He reports the family spent an anxious night. "It was a relief when the storms finally quit, and everything was fine here," he said.

Meanwhile, Delta Division Vice Director Henry Leggette, WD4Q, in Memphis, Tennessee, reports considerable ham radio activity in the Jackson area, where tornadoes hit last weekend, as well as in Clarksville, where twisters struck early on the morning of January 21. "The VolNet has played an important part here," he said. The VolNet is a 2-meter net interfaced via a 440-MHz link and providing coverage from Oxford, Mississippi, to the Memphis area and beyond. Leggette said he planned to visit the Jackson area over the weekend to assist.

Tennessee SEC Jim Jarvis, WD4JJ, in Bristol, relayed a request for amateurs with mobile units to assist at the Clarksville/Montgomery County Emergency Operations Center. Hams willing to volunteer may contact the EOC directly on the 147.39 MHz repeater, he said. "The police department and city hall have been completely demolished, and the downtown area is a complete wreck." Jarvis also reports damage in Humphreys County, as well as in McEwen, Waverly, and Camden counties. He estimated that up to three dozen hams active in providing emergency communication in the Clarksville/Montgomery County area.

Hams also were reported active at Ft Campbell, Kentucky, with Albert Furlow, KA1FFO, in Clarksville said to be at the helm.

In the aftermath of the earlier storms, Jarvis reports that EC Kenny Johns, AB4EG, in Jackson was rounding up volunteers to assist the Red Cross with damage assessment in the seven counties hit last weekend. Among those reported to be active were members of John's club, the West Tennessee Amateur Radio Society. Johns said a SKYWARN net was activated last Sunday afternoon, but the tornadoes were unexpected. Two ham weather spotters saw the twisters--illuminated by the lightning--and took shelter. After the storms struck, more than two dozen ARES members handled health-and-welfare traffic at the EOC for 22 hours. During that time, the EOC repeater was knocked off the air, but amateur repeaters, including one at the EOC, remained up, making Amateur Radio the primary backup for the EOC.

Hams were on alert for additional severe weather prior to the January 21 storms that struck Tennessee and Arkansas. Jarvis says SKYWARN nets remain on the alert for additional severe weather this weekend in the Tennessee-Arkansas-Louisiana region.

BOARD EMBRACES NEW TECHNOLOGY FOR AMATEUR RADIO'S FUTURE

The ARRL Board of Directors has adopted an initiative proposed by President Rod Stafford, W6ROD, to promote new technology in Amateur Radio. Meeting in Houston, Texas, January 15 and 16, the Board adopted Stafford's proposal to establish an Amateur Radio Technology Task Force to develop a strategy and plan for exploring new technologies and assessing their applicability and possible incorporation into Amateur Radio.

Northwestern Division Director Greg Milnes, W7AGQ, opened the Board's first 1999 session with a tribute to former Director Mary Lou Brown, NM7N, who died last December 3. The Board also observed a moment of silence in her memory.

In his meeting report, Stafford expressed his concerns about dwindling amateur activity in general and a decline in ARRL membership in particular. "In my humble opinion, it seems that the average ham radio operator is not very excited about anything in Amateur Radio these days," he said. The Board went along with Stafford's suggestion that an infusion of newer technologies into the hobby might renew enthusiasm.

Stafford will appoint members to the Technology Task Force who have been actively involved in experimenting with or developing new technology. An initial report is due next January. In a collateral move, the Board

reconstituted the Future Systems Committee as the Amateur Radio Technology Working Group to serve as a resource for the Technology Task Force. As an adjunct to the Technology Task Force, the Technology Working Group will conduct experiments, research and development involving newer technologies.

In other action, the Board declined--at least for now--to join the National Frequency Coordinators' Council in petitioning the FCC seeking rules requiring frequency coordination for fixed repeaters and auxiliary stations. A majority of the Board said there was no compelling evidence warranting a move beyond the existing rules. But the Board did invite the NFCC to revisit the issue at a later date.

"Coordinated repeaters already have a degree of priority," said ARRL Executive Vice President David Sumner, K1ZZ, in explaining the Board's decision. Board members are keeping an open mind, but by and large, they are not yet persuaded of the necessity to go beyond that."

In a letter to Stafford following the meeting, NFCC President George Isely, W9GIG, expressed disappointment. "I think it's fair to say this is not a dead issue for the NFCC," he said. NFCC members had approved the filing of the petition by a wide margin.

In his report to the Board, Vice President Joel Harrison, W5ZN, praised an apparent return to enforcement by the FCC. Harrison said the League has been pushing for better enforcement for some time, and that FCC action against willful violators has been a historical and primary concern of the amateur community. Harrison summarized recent FCC actions as the Board applauded.

In other matters, the ARRL Board:

* Elected Directors Kay Craigie, WT3P, Frank Fallon, N2FF, Fried Heyn, WA6WZO, and Tod Olson, K0TO, to the Executive Committee for the 1999 term.

* Awarded the International Humanitarian Award to Radio Amateur du Qu&#65533;bec Inc (RAQI) for its service to the citizens of Quebec during the devastating 1998 ice storm.

* Following a study of the Y2K computer issue by its Volunteer Resources Committee, recommended that section managers, section emergency coordinators, and ARES groups enter into memoranda of understanding and conduct drills, with public utilities and public safety agencies for emergency communications necessitated by possible Y2K problems.

* Authorized ARRL votes to ratify the elections of ARRL and IARU leader Larry E. Price, W4RA, as IARU President, and David A. Wardlaw, VK3ADW, as IARU Vice President for the 1999-2004 term.

* Elected Eugene Hastings, W1VRK, and ARRL Directors John Kanode, N4MM, and Greg Milnes, W7AGQ, to three-year terms as directors of the ARRL Foundation.

* Responded to an offer by the Boring (Oregon) Amateur Radio Club--the founding sponsor of Kid's Day--and agreed to have the ARRL assume sponsorship of this operating event that introduces Amateur Radio to hundreds of kids in a creative format (See January 1999 QST, page 46).

* Following the recommendations of its Administration and Finance Committee, approved operating and capital spending plans for 1999.

* Amended the Bylaws to permit international membership without receipt of QST. To receive QST each month, international members must pay for additional postage. Instead, International members may now opt to pay the regular dues rate and to receive the annual ARRL periodicals CD-ROM, including QST, QEX, and NCJ, along with other membership benefits such as access to the Members Only Web Site and reduced DXCC fees.

Complete minutes of the annual meeting are available on ARRLWeb at http://www.arrl.org/announce/board-9901/.

EXECUTIVE COMMITTEE TO PONDER LEAGUE NAME CHANGE

Could the American Radio Relay League enter the new millennium with a new name? The ARRL Board of Directors has asked the League's Executive Committee to develop a proposal to change the League's name to one that more clearly reflects the focus and purpose of the organization to hams and nonhams alike. The Board charged the Executive Committee to develop a name change proposal for consideration by the Board at its July meeting.

The name-change idea is not a new one. A previous proposal was considered by the Board several years ago, but it was set aside.

The now-obscure "Relay" part of the League's name often is the most troublesome to explain nowadays. It refers to the earlier practice, fostered by the League, of relaying long-distance message traffic from station to station in a time when direct contact was not always feasible. The Board's resolution said the League's current name no longer adequately reflects "the breadth of amateur radio" and that the ARRL needs a name that would "clearly reflect our focus and purpose--Amateur Radio--to those both inside and outside our organization."

The Board said the year 2000 would be "a natural point for change." Members who learned of the resolution this week discussed the issue on various Internet reflectors.

Earlier this decade, the ARRL Board declined a suggestion from the Long Range Planning Committee to change the League's name to the American Amateur Radio League--ironically the same name first suggested by ARRL founder Hiram Percy Maxim in 1914. The November 1992 issue of QST broached the subject to the League's members and encouraged them to express their opinions. Directors overwhelmingly--but not unanimously--abandoned the name-change campaign at the Board's January 1993 meeting.

FCC ISSUES 5-MHZ EXPERIMENTAL LICENSE TO ARRL

The FCC has issued an Experimental Radio Service license to the ARRL to permit two-way tests in the vicinity of 5 MHz, the most likely site of the next amateur HF band. The license, bearing the call sign WA2XSY, was issued January 8. A group of 15 current amateurs in various parts of the US and the Caribbean will conduct experimental, two-way RTTY and SSB transmissions within the band 5.100 to 5.450 MHz. To avoid interfering with existing

services, the participants will confine their operations to the least-populated 50-kHz segment.

"The idea is to show that an amateur allocation there will improve our emergency communication capabilities by filling the gap between the 3.5 and 7.0 MHz bands," said ARRL Executive Vice President David Sumner, K1ZZ. Sumner pointed out that several of the participants are phone net members in the Caribbean and Gulf area who frequently handle hurricane-related traffic and now must alternate between 75 meters and 40 meters. Other participants are members of a nationwide digital data-forwarding network.

The Experimental license is good for two years. Two studies by the National Telecommunications and Information Administration (NTIA) include an allocation at 5 MHz among the future spectrum needs for the Amateur Service. The subject is not likely to show up on the agenda of a World Radiocommunication Conference for several years, however.

Participants in the WA2XSY experiment may run up to 200 W effective radiated power. Similar multiband trap dipoles capable of operation on 80 and 40 meters as well as at 5 MHz will be employed at each station location. Operation by participants will consist of short transmissions to determine propagation characteristics.

Participating stations are located in New Hampshire, Tennessee, Ohio, Florida, Mississippi, Wisconsin, Indiana, California, Utah, New York, Texas, the US Virgin Islands, and Maryland.

LEAGUE FILES "RESTRUCTURING" REPLY COMMENTS

The ARRL has suggested that its plan to restructure Amateur Radio licensing represents the best compromise among the many that have been put forth. In reply comments filed January 15 with the FCC, the League held firm to its restructuring proposals that would reduce the number of license classes from six to four by eliminating the Novice and Tech Plus tickets; provide 5 WPM and 12 WPM Morse code testing tiers; and permit Technician operators to use Morse code on the current General class CW bands.

The League's plan also would refarm the Novice/Tech Plus CW allocations among the remaining license classes and revise both written and Morse examination requirements to make them more relevant and more comprehensive. In general, the League's reply comments reiterated its initial comments filed last December 1 in the proceeding, WT Docket 98-143, which the FCC refers to as its 1998 Biennial Regulatory Review of Part 97.

The FCC received around 2000 comments--mostly from individual amateurs--in response to its Notice of Proposed Rule Making last August. "The number of comments filed by radio amateur licensees and amateur groups is impressive and heartening," the League said. "The comments reveal that the Amateur Service is active, vital" and show that hams are willing to participate in their own regulatory affairs. "To a greater extent than in other services, the Commission should heed the suggestions and advice of its licensees," the ARRL advised.

Most of the comments focused on the number of license classes, Morse code requirements, and HF subband allocations. But, the League said, there was no real consensus in terms of an overall approach the FCC should take.

Amateur Radio iconoclast Wayne Green, W2NSD, publisher of 73 magazine, suggested one license class. A number of commenters suggested three. CQ Communications suggested three plus a Basic Amateur Permit--a kind of learner's permit. Others wanted four or even five. The ARRL said four licenses classes provided a manageable gap between licenses classes to encourage upgrading. "Looking at the matter this way, four license classes is a good plan, and three classes is not," the League said. Under the League's plan, current Novice and Tech Plus licensees would be automatically upgraded to General.

Comments on Morse testing ranged from eliminating the code requirement altogether to keeping the present system. The ARRL held to its proposed two-tier Morse code examination regime, with a 5 WPM test for General class and a 12 WPM test for Advanced and Extra. "It would appear that the majority of the comments agree that there is currently an overemphasis on telegraphy as an examination requirement," the League said. At the same time, the ARRL said that Morse is still relevant to ham radio and should continue as a requirement. The League also cited support for its plan to let Technician licensees operate Morse code in the General CW bands without prior testing. The proposal "received no significant opposition in the comments," the League noted, although some did question whether the League's proposal was consistent with international regulations.

The League found an ally in CQ Communications comments on refarming the Novice/Tech Plus CW allocations among the remaining classes for additional phone bands. CQ called it "the correct approach, as it its proposal to 'grandfather' existing Novices into the General class."

Noting the present slowdown in Amateur Radio growth, the League also urged the Commission to "not leave the Amateur Service in limbo" on the matter of restructuring but to act promptly. The pending restructuring "has a dampening effect on the inclination of newcomers to proceed with amateur licensing and on existing licensees to upgrade" the League asserted. The ARRL predicted that simplifying the licensing structure will help to boost growth in the hobby.

"The League's comprehensive proposal provides the best means of accommodating the diverse views of the parties filing comments in this proceeding," the ARRL concluded.

SOLAR UPDATE

Solar sage Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was up over the past week, with an astonishing jump in solar flux on January 20 to 238.8. Since this noon reading and the afternoon reading of 210.7 both were solar-flare enhanced, we will use the morning measurement of 171.8 for our record book instead.

Looking at the flux values during the nine measurement periods on January 19-21, they were 178.4 at 1800 UTC, 175.9 at 2000 UTC, 174.7 at 2200 UTC,

then 171.8, 238.8 and 210.7 during the same three periods on January 20, and 171.4, 175.3 and 170.5 on January 21. The reading at noon local time (2000 UTC) in Penticton, British Columbia, is the number used for the daily solar flux.

Sunspot numbers for the week averaged nearly 56 points higher than the previous week, and average solar flux was up over 45 points to 159.7. Average solar flux for the same period one year ago was 94.6. Higher activity has meant better conditions on higher frequencies, as increased radiation causes the ionosphere to become more densely charged. When the ionosphere is more dense, then higher frequency signals are reflected and don't pass through into space.

For this weekend, January 22-24, expect a rising solar flux, with values of 180, 185 and 180 for Friday through Sunday. Planetary A indices for those days are expected to be around 14, 12 and 10, so some expected unsettled conditions on Friday should quiet down by Sunday. Beyond the weekend, look for solar flux values to drop below 180 after January 25, and below 150 by the end of the month. Flux values are expected to bottom out around 120 from February 3-7, then rise above 150 after February 11, and to 175 by the middle of the month. Unsettled geomagnetic conditions could return around February 9-11.

Last week in VHF news ZL3TIC in Christchurch reported hearing a number of North American stations on 6 meters, as well as low-channel commercial television signals. This was on January 14. The next day WA5IYX in Texas heard a number of 6-meter beacons around North America.

Sunspot numbers for January 14 through 20 were 86, 106, 106, 131, 169, 182, and 156, with a mean of 133.7. The 10.7-cm flux was 136.9, 142.6, 158.5, 161.4, 170.9, 175.9 and 171.8, with a mean of 159.7. The estimated planetary A indices were 26, 17, 7, 5, 5, 5 and 7, with a mean of 10.3.

IN BRIEF:

* This weekend on the radio: The ARRL January VHF Sweepstakes is this weekend. See December 1998 QST, page 96, for details. Just ahead: The CQ WW 160-Meter DX Contest (CW) is January 29-31. Also look for the REF French Contest (CW), the UBA Contest (Phone), the YL International QSO Party (CW) and the Kansas QSO Party. See January QST, page 84, for more information.

* Papal visit special event: Special event station W0K will be on the air to mark the visit of Pope John Paul II to St Louis, Missouri, January 26-27. Members of St Louis-area ham radio clubs will staff the special event station, which will operate on HF from 0000 UTC January 26 through 0000 UTC January 28. The station also will be on the air on 2-meter FM simplex (146.55 MHz). During his visit--his fifth to the US--the Pope is scheduled to meet with President Clinton.--thanks to Brad Ziegler, KC0CDG

* New Canadian prefix: The territory of Nunavut comes into existence April 1, 1999, and with it, a new Amateur Radio prefix. Radio Amateurs of Canada

has announced that Nunavut will get the prefix VY0 "to ensure a unique identification for the new territory." However, there are no plans to add the new territory to the list of ARRL November Sweepstakes multipliers. Nunavut, which means "our land" in the Inuktitut language will be comprised of the eastern portion of the present Northwest Territories. The new territory will be about five times the size of Alberta but has a population of just 24,000, some 85% of whom are Inuit. The VE8 prefix will remain in use for the western Northwest Territories, which may get a new name as a result of the partitioning. For more information on Nunavut, see http://www.ccu-cuc.ca/en/library/nunavut.html.

* Australia Day prefix: Australian stations may identify using the special "AX" prefix on Australia Day, January 26. The Australian Communications Authority says use of the AX prefix is for 24 hours only, midnight to midnight local time (ie, after 1300 UTC on January 25 to 1600 January 26).--QNews

* Joe Walsh, rock star/Collins collector: A West Virginia ham recently cut a deal to sell his refurbished vintage Collins KWS-1 transmitter and 75A4 receiver to singer-songwriter Joe Walsh, WB6ACU. Mark Danehart, W8MSD, of Mt Olivet, West Virginia, decided to sell the pair recently, and he was surprised when Walsh was the lone caller responding to his ad. Danehart made arrangements to ship the heavy metal units to Walsh, who was wrapping up a concert tour. An ARRL Life Member, Walsh, 51, has enjoyed a career with the Eagles and as a solo artist. He's belonged to the League for 27 years now. In addition to a check for the Collins gear, he sent Danehart an autographed picture as well as two autographed CDs. Walsh's road manager also promised Danehart front row seats to Walsh's next concert in the Ohio Valley. Danehart's story of the Collins sale appeared December 9, 1998 in The Wheeling Intelligencer.

* ULS Final Order published: The Final Order to implement the new Universal Licensing Service was published December 14, 1998, in the Federal Register. The new rules become effective in mid-February--60 days following publication. Among other things, the ULS will replace the venerable Form 610 series with a new Form 605. Electronic filing of routine Amateur Radio applications will be encouraged but not required. Included in the new rules are changes affecting operation in the US by hams from other countries with which the US has reciprocal agreements. Under the new rules, alien operators would no longer have to apply for a permit to operate in the US, similar to the system already in place between the US and Canada.

* QST Cover Plaque Award: Manfred Mornhinweg, XQ2FOD, is the winner of the December 1998 QST Cover Plaque Award for his article, "A 13.8-V, 40-A Switching Power Supply." Congratulations, Manfred!

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.
